That the Council be requested to appoint a Materia Medica Committee, whose duty it will be, with such professional aid as they can summon to their assistance, to investigate and pronounce on the uses and properties of all drugs which shall be used by the profession, and that in view of the grave injury inflicted on the public and on the profession alike by the present wholesale introduction of drugs by mere commercial firms, whereby the ground is being cut from under our feet, and the gullible public are induced to accept nostrums on the sole strength of mere assertions, that the hospitality of our museum and the pages of our JOURNAL shall be both shut out from giving any further aid to the wholesale advertisements of drugs and preparations, the sole virtues of which have too often no existence save in the mendacity of their introducers.

Scientific Work of the Association.

By the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That, with a view to further interesting Divisions and Branches in the Section work of the Annual Meeting, it be an instruction to the Central Council to encourage them to nominate one or more members to take part in the discussions of any subject arranged for, which has previously been considered by the Division or Branch.

Promulgation of Policy of the Association.

By the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That it be an instruction to the Central Council to investigate and report as to the best means for bringing before the Members those conclusions of this Representative Body arrived at from time to time which define the policy of the Association, with a view to their general acceptance and adoption throughout the Association.

Representatives at the United Kingdom Hospitals Conference.
By the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That this Representative Body do annually elect twenty-five of its Members, of which not less than three shall be Representatives from Scotland, and not less than three Representatives from Ireland, to represent it at the United Kingdom Hospitals Conference, so long as these Conferences shall continue to be held, together with others to be elected by the Central Council, and that they do report to this Body.

D.—NOTICES AFFECTING THE POLICY OF THE ASSOCIATION.**Contract Practice.**

By the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That it be an instruction to the Central Council to formulate Resolutions embracing the main principles as affecting Medical Contract Practice.

By the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That the proposed Federated Societies Medical Benefit Association should not receive the support of members of the Association, since it contravenes the conditions which the Association has approved for the regulation of Contract Practice.

Public Medical Service.

By the ST. PANCRAS AND ISLINGTON DIVISION (Metropolitan Counties Branch):

That the time is now opportune for the British Medical Association to take into consideration the drafting of a scheme for a Public Medical Service, to embrace Philanthropic Dispensaries and Medical Services, School Clinics, the Poor Law Medical Service, Provident Dispensaries, and the Medical Services of Friendly Societies and Clubs.

Hospital Administration.

By the WATERFORD DIVISION (South-Eastern of Ireland Branch):

That the Council be instructed to take steps to give practical effect to the Oxford resolutions on the subject of gratuitous or semi-gratuitous hospital treatment of the well-to-do.

By the WANDSWORTH DIVISION (Metropolitan Counties Branch) (as an amendment to the Report and Recommendation of the Hospitals Committee *re* Medical Certification of Suitability of Patients for Hospital Treatment):

That except in emergencies a medical certificate of suitability for hospital treatment be required as a condition of hospital treatment.

Management of General and Cottage Hospitals.

By the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That the management of General and Cottage Hospitals should be vested in a Committee on which the local medical profession is adequately represented by directly elected representatives.

Medical Teaching.

By the WATERFORD DIVISION (South-Eastern of Ireland Branch):

That it is contrary to the interests of the profession that the mass of the profession, and even the majority of members of hospital staffs, should be excluded, as at present, from all share of medical teaching.

Medical Examinations.

By the WATERFORD DIVISION (South-Eastern of Ireland Branch):

That all medical examinations ought to be duly advertised, and open to the presence of every registered medical practitioner.

By direction of the Chairman of Representative Meetings,
J. SMITH WHITAKER, *Medical Secretary*.

Meetings of Branches & Divisions.

The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

BERMUDA BRANCH.

A MEETING of this Branch was held at the Board Room, Public Buildings, Hamilton, on January 30th, Colonel J. C. COLLING, R.A.M.C., in the chair.

Resignation of Honorary Secretary.—Dr. Harvey, after having completed twenty-three years of service as Honorary Secretary of the Branch, begged to be allowed to resign his duties, and Dr. W. E. Tucker was elected in his place. A vote of thanks to Dr. Harvey for his long services was proposed, seconded, and carried unanimously.

Accounts.—The accounts were laid on the table, adopted, and passed.

Proposed Midwives Act.—A discussion took place on the provisions of a Midwives Act which it is proposed to introduce into Parliament at the next session, the objects of this Bill being to provide for the education, registration, and control of midwives practising in the colony.

The following resolutions were passed:

1. That it is the opinion of this meeting that many of those now practising as midwives are inefficient.
2. That steps should be taken for the proper training, control, and registration of midwives.

METROPOLITAN COUNTIES BRANCH:

HAMPTSTEAD DIVISION.

A MEETING of the Division was held on March 23rd at the Hampstead Conservatoire, Dr. OPPENHEIMER in the chair.

Resignation of Dr. Yeld.—A letter from Dr. Yeld resigning the secretaryship of the Division was read, and the Chairman was requested to write, in the name of the Division, to Dr. Yeld expressing the great regret with which the Division accepts his resignation and its grateful appreciation of his valuable services as Honorary Secretary during the last five years.

Representation at Representative Meeting.—Mr. H. W. ARMIT was appointed to represent the Division at the Representative Meeting.

Vaccine Therapy.—Sir ALMROTH WRIGHT gave an address on the principles of vaccine therapy, which was followed by a discussion, in which Drs. FORD ANDERSON, ARMIT, and PARSONS took part, and a cordial vote of thanks to Sir Almroth Wright for his very interesting and suggestive address was carried by acclamation.

Hampstead Hospital.

A meeting of the local profession was held under the auspices of the Hampstead Division on Saturday, March 20th, to consider the Hampstead Hospital question in its present development, and to formulate definitely the attitude which the profession in Hampstead should take towards it. Dr. OPPENHEIMER (Chairman) gave the reasons why it was thought desirable to convene the meeting, and Mr. ARMIT gave a summary of the Hampstead Hospital question subsequent to July 3rd, 1907, the date of the last meeting of the profession on the question. The following resolutions were proposed, seconded and carried *nem. con.*:

1. That it is the opinion of this meeting that a substantial portion of the Hampstead Hospital should be set aside as a home hospital for local needs.
2. That the home hospital should contain both contributory and free beds, and be served by local practitioners.
3. That sufficient guarantees be given that no out-patient department shall be opened in Hampstead.
4. That the local profession be entitled to nominate representatives to serve on the council of the hospital.

The following resolution was proposed, seconded, and carried:

That when patients in the home hospital are not attended by their own doctor, they shall be served by local practitioners according to *rota*, elected by the profession.

SUPP. 2

RICHMOND DIVISION.

A GENERAL meeting of this Division was held on Wednesday, April 14th, at the Royal Hospital, Richmond.

Thirty-eight Years of Professional Life.—Dr. J. R. LEESON read a paper entitled, *Thirty-eight Years of Medical Life: A Retrospect and Prospect*. He began by contrasting medical education in the early Seventies with that of to-day, and spoke of the revolution in thought the discovery of the microbe had effected. The subsequent introduction of antiseptics had remodelled the practice of medicine, surgery, and midwifery. The complex prescription had disappeared, and many of our now commonest drugs were of quite recent origin. Much of the prestige and veneration that surrounded the old doctor had disappeared, and the general diffusion of medical knowledge amongst the laity by the press and cheap literature had tended to diminish his dignity. Acute diseases were now known to run a definite course, but little influenced by drug treatment. Diagnosis was insisted upon as being the practitioner's sheet-anchor, and his best defence against the prescribing chemist and modern quackery, but in the present state of badly-paid club and low-class practice the time required for such was ruinous. Many causes were instanced as unfavourably influencing the practitioner—the general decline of middle-class prosperity, the decline in their birth-rate, and the abuse of hospitals by those who could afford to pay for attendance; the change of treatment in many chronic diseases, such as phthisis, enlarged prostate, and gall stones, etc.; the minimizing of sepsis in surgery and midwifery, and the general advance of sanitation, though of infinite benefit to humanity, had all told against his chance of earning a living, and although the general scale of living and the rise of wages and rates had almost doubled during the present generation, his fees had steadily diminished. The doctors of the past had derived much of their income from their "medicines," and their remuneration had been largely based upon this scheme; but now drugs were less in use, whilst the fees of general practitioners for diagnosis and skilled advice had been stationary, if not regressive. From his experience the general practitioner had a struggle to live, and, considering the knowledge required, and the danger, anxiety, and worry of his calling, by night as well as by day, the remuneration was sadly out of proportion to his work. He had never known a general practitioner retire upon his professional earnings. The applications for relief from such a charity as the Royal Epsom Medical College, of which he had been local honorary secretary for many years, and for its pensions were heart-rending, and showed the widespread distress amongst the widows and orphans of the profession. The outlook from a remunerative aspect was gloomy. How could club work be properly done for a penny a week; how could the poor of a parish of 27,000 people be properly doctored for £80 a year? There were certainly three remedies which should be applied: (1) A higher standard of general knowledge should be required for the entrance examination; (2) greater attention should be paid to diagnosis and the thorough investigation of all cases under treatment, for which fees proportionate to the skill and time required should be demanded; this would diminish the incursions of the prescribing chemists, modern quackery, Christian Science, *et hoc genus omne*; and lastly (3), some righteous form of trade unionism and combination to lift the workers above the woes of "the sweating systems" now in vogue. Truly it was a noble profession—the noblest—offering countless opportunities for the highest qualities of heart, head, and hand, but, as some one said to him, "a devil of a business!" For the sake of the humanity which it sought to serve it must be rescued from the impetuous and embarrassing conditions into which it was drifting. Under present conditions he regarded it more as a philanthropy than as a profession; but how could it thus hope to attract into its ranks the best brains and fibres of the community which it so imperatively demanded? A discussion followed, and Dr. LEESON, who was heartily thanked for his paper, replied.

1909 241

STRATFORD DIVISION.

A MEETING of this Division was held on Thursday, April 15th, at the Alexandra Hotel, Stratford, E., Dr. J. BIERNACKI presiding.

Address.—Dr. C. O. HAWTHORNE delivered a very interesting address on the *British Pharmacopoeia*, and, after answering a number of questions, was awarded a very hearty vote of thanks.

NORTHERN COUNTIES OF SCOTLAND BRANCH.

A clinical meeting of this Branch was held at the Northern Infirmary, Inverness, on March 27th. Twenty-two members were present.

Apologies for Non-attendance.—Apologies were received from Drs. Norman Walker, Duncan, Sellar, Kirkwood, etc.

Demonstration.—Dr. Gordon LANG gave a cystoscopic demonstration, and exhibited cases which had been under his care in the x-ray department of the Northern Infirmary.

Pyosalpinx.—Dr. MUNRO MOIR read notes on a case of pyosalpinx of the left Fallopian tube, which was removed.

Mycosis Fungoides.—Dr. SIMPSON (Golspie) contributed a paper on mycosis fungoides. When first seen in 1892 the patient, a married woman aged 44, with several healthy children, suffered from what Dr. Simpson took to be a single patch of dry eczema, about the size of a shilling, situated on the right side of the neck, below and behind the angle of the jaw. This was treated with zinc-ichthylol paste. The irritability was lessened, but the patch was not cured. In 1900 Dr. Allan Jamieson saw the patient. By this time the patch had increased in size, and there were similar patches on the lower part of the face on the same side. After two attacks of erysipelas, in 1900 and 1901, there was distinct relief in the irritability of the patches, and they seemed less active. This condition did not last long, and about the middle of 1901 the activity was renewed, the patches became worse, and Dr. Allan Jamieson, who again saw her in 1902, reported that the case was unmistakably one of classical mycosis fungoides. She was treated by x rays from June to October, and returned to Golspie practically cured; with the exception of some slightly irritable patches on her back there was nothing remaining of the disease; the tumours had evidently disappeared. From the end of 1902 until the spring of 1905 she remained well, when she was again seen by Dr. Simpson; she complained at that time of fresh patches on the back, abdomen, and legs; they were all in the "eczematous" stage. As x rays were available in the Lawson Memorial Hospital, Golspie, she attended three times a week for treatment. Short exposures (four to five minutes) with a medium tube at a distance of 6 to 10 or 12 in., according to the size of the patch, gave great relief. Dr. Simpson did not see the patient from April, 1906, until December of that year, when the condition was much worse. The characteristic tumours had developed on the back and on the front of the forearms; there were large thickened oozing patches on the abdomen, under the breasts, on the hips, and on the insides of the thighs. The x rays were vigorously renewed, but she did not attend for treatment as regularly as could be desired. The tumours on the back readily yielded to treatment by the x rays, but her general condition did not improve. In June, 1907, she became so weak that she was unable to attend hospital. The mucous membrane of the soft palate became red and oedematous, and later the soft palate and roof of the mouth ulcerated in patches, making swallowing extremely difficult. There was a fetid odour from the mouth. The tumours on the arms broke down, and became offensive and difficult to dress. She became unable to swallow nourishment, and died in September, 1907. There are some interesting points which may be mentioned: (1) It was a case of classical mycosis fungoides; (2) it was, as far as Dr. Simpson is aware, one of the first cases treated by x rays; (3) although the disease did return, the parts originally treated and cured in Edinburgh Royal Infirmary by the x rays remained unaffected to the end.

Sciatica.—Dr. KAYE (Strathpeffer) contributed a paper on sciatica, and remarked that the term "sciatica" was commonly used in an extremely elastic sense, and based his notes chiefly with the view of determining the legitimate meaning of "sciatica." In most textbooks the word was not defined, but it was generally implied that it causes pain in the course of the great sciatic nerve, which might be a true neuralgia—that is, a pain of the real explanation of which next to nothing was known—or due to a primary

inflammation of the nerve, or rather of the connective tissue elements. As the ideal of all nosological nomenclature should be to name diseases according to their causes, this implied definition was the best possible, and the term "sciatica" should be confined entirely to cases which fell within this category. Thus, pain referred to the sciatic region and due to pressure or inflammation arising in the spine, pelvis, buttock, hip, or any other structures near or among which the nerve passed in its course should not be called "sciatica" any more than pain due to a sarcoma of the head of the humerus or a suppurating shoulder-joint should be called "brachial neuritis." It followed that the presence or absence of any of these potential causes for the pain should be fully investigated; it was only after the exclusion of such conditions, coupled with the presence of symptomatic and physical signs of a pathological condition of the great sciatic nerve, that a diagnosis should be made. Dr. Kaye related the cases of three patients recently under his care, all labelled "sciatica," but who in his opinion suffered from totally different diseases, which involved widely different prognosis and treatment. In two of the cases the symptoms complained of were due to disease of a tuberculous nature in the neighbourhood of the hip-joint, the other being obviously due to adhesions about the sciatic nerve. Dr. Kaye submitted that the term "sciatica" should not be applied to various conditions of structures other than the sciatic nerve which caused pain in the thigh, but should be strictly confined to: (1) A neuralgia—that is, as abnormality of the nerve in its connexions could be demonstrated by pathological methods, it was distinguished clinically by irregular intermittence of the pain, the existence of tender points along the course of the nerve, and the absence of pain on stretching the nerve; (2) the more common form, which pathologically was a perineuritis or interstitial neuritis, was ordinarily described as being rheumatic or gouty in origin. Dr. Kaye also described a chronic form of sciatica, giving two varieties according to the anatomical distribution of the fibrous tissue: (1) Those cases which were due to adhesions between the perineurium and the structures within or without it; these were characterized by the onset of pain only when the nerve was pulled upon, as, for instance, by the act of walking, or by extending the leg on the flexed thigh; there was also some tenderness of the nerve on manipulation, but no other signs. (2) The cases in which the nerve fibres were bound up by the interstitial development of fibrous tissue; in these the pain was almost constant, but was increased by movement. The nerve was tender on manipulation; there was paraesthesia or anaesthesia of the cutaneous distribution, and in extreme cases muscular wasting and paresis with loss of knee-jerk. Dr. Wm. BRUCE (Dingwall) also contributed a short paper on sciatica. He referred, as Dr. Kaye had done, to the looseness of the term "sciatica," and urged the necessity of making sure that the possibility of the presence of mischief in the hip joint was excluded. Dr. Bruce referred to the presence or absence of lameness, heat or swelling of the articulation, and muscular wasting. Tenderness on pressure, more especially at the upper aspect of the articulation, was often severe. Dr. Bruce mentioned that in the large majority of his cases a certain amount of disability had been discovered either on flexion, extension, internal or external rotation. There were a few cases he had met with where he had not been able to make out any impediments, or pain in passive movements, but in a good few he had discovered far advanced ankylosis, occasionally entirely overlooked.

Artificial Immunity in Tuberculosis.—Dr. DE WATTEVILLE (Kingussie) read a short paper on this subject. He dwelt on the success of hygienic, dietetic, and medicinal treatment. But the success in these cases was limited. Germicides could not be introduced into the body in sufficient quantity to make decided and lasting impression. Dr. de Watteville described (1) passive immunity, which was abandoned as unsatisfactory; (2) active immunity, by means of Koch's TR, which was the only one used clinically. The preparation was given in gradually increasing doses guided by clinical symptoms, but the results were unsatisfactory and often attended with harm. Reference was also made to Wright's work on opsonins and to the opsonic index as a guide in tuberculin treatment.

SOUTH-EASTERN BRANCH: MAIDSTONE DIVISION.

A MEETING of this Division was held at the Kent County Ophthalmic Hospital on Thursday, April 15th, at 3 p.m. There were present: F. T. Travers, M.B., F.R.C.S. Edin., Chas. Killick, M.D., F.R.C.S., Mrs. Palm, Southwell Sander, Black, Parr-Dudley, Forge, Ryan, and Geo. Potts, Honorary Secretary.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Paper, Cases, Etc.—Mr. KILICK gave a short account of iudectomies performed for various causes, and showed cases to demonstrate the results especially for glaucoma. Mr. Killick also showed several other interesting cases. Dr. RYAN, who was welcomed by the Chairman as a new member, showed a case of omphaloenteric, and enumerated several cases of syphilis, chorea, and pernicious anaemia successfully treated by soamin.

Apologies for Non-attendance.—Letters of regret for non-attendance were read from Drs. Wolseley, Lewis, Douglas, and Joyce.

Postponement of Resolution.—Dr. Joyce's resolution was allowed to stand over to next meeting.

Proposed Division of Branch.—Dr. Stewart's letter was read re division of the South-Eastern Branch, and it was unanimously resolved that this Division agree to there being a separate Kent Branch.

Resolution of Sympathy.—Dr. Gallard's letter was read, and the Honorary Secretary instructed to convey the Division's sympathy.

Letter of Warning to Head Masters of Schools.—Dr. PARR-DUDLEY gave notice that he would propose the following resolution at the next meeting:

That the letter of warning issued by the Manchester Division to the head masters of schools in their Division with reference to the medical profession shall also be issued by this Division to the head masters of schools in Kent.

Attendance at Meetings.—It is particularly requested that members of the Division should endeavour to attend the meetings of the Division. The Honorary Secretary would be very glad if members would kindly inform him if they desire to read papers or show cases at the next meeting or any subsequent meetings, as it is the wish of the members to make the meetings of clinical interest. The names of new members will be gladly received by Geo. Potts, Honorary Secretary, Kent County Ophthalmic Hospital, Maidstone.

SOUTH-EASTERN OF IRELAND BRANCH.

A MEETING of this Branch was held at Adelphi Hotel, Waterford, on April 7th, at 3.30 p.m. In the absence of P. J. Murphy, F.R.C.S.I. (President), Dr. MACKESY was voted to take the chair. Fourteen members were present.

Apologies for Non-attendance.—Three members sent apologies for non-attendance.

Confirmation of Minutes.—The minutes of the last meeting were read, approved, and signed.

Well-to-do Patients and Hospitals.—It was proposed by Dr. Jos. P-OWER and seconded by Dr. Wm. SHEE:

That the modification suggested by the Irish Committee regarding Resolution 2 (see SUPPLEMENT, September 19th, 1908, p. 196, re admission of well-to-do patients into union hospitals, passed at the meeting of the Branch held at Waterford on September 2nd, 1908, and accepted in its amended form by the Branch meeting (see SUPPLEMENT, March 20th, p. 139) held at Carlow on March 3rd, 1909, be rescinded and that the original Resolution stand.

Fees under Employers' Liability Act, etc.—Dr. MACKESY moved and Dr. JELLET seconded:

That the members of this Branch bind themselves not to accept less than one guinea for examination and report in any case under the Employers' Liability Act, Workmen's Compensation Act, Fatal Accidents Act, or at Common Law, whether the same be furnished on behalf of employers or insurance companies.

The motion was carried. It was proposed by Dr. Wm. SHEE, and seconded by Dr. Jos. P-OWER:

That this resolution be circulated amongst members and published in the local press.

The motion was carried.

Dinner.—This concluded the business of the meeting and the members dined together.

ES To ensure the insertion of notices in this column, they must be received at the Central Offices of the Association not later than the first post on Tuesday.

Association Notices.

COUNCIL MEETING.

A MEETING of the Council will be held at 2 o'clock in the afternoon of Wednesday, April 28th, in the new Council Room, at 429, Strand, London, W.C.

By Order,

GUY ELLISTON.

March 25th, 1909.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BATH AND BRISTOL BRANCH.—The sixth ordinary meeting of the session will be held at the Museum, Bath, on Wednesday evening, April 28th, at 8 o'clock, Mr. J. Paul Bush, C.M.G., President. The following papers are expected:—W. P. Kennedy, M.D.: Cancer Treatments; F. G. Thomson, M.D.: Referred Cardiac Pain; J. M. H. Munro, D.Sc.: Case of Early Addison's Disease, treated with Tuberculin; G. H. H. Almond, M.B.: Theoretical Considerations of Pulmonary Auscultation. A Council meeting will be held at 7.55. Trains (G.W.R.): Bristol to Bath, 7.24; Bath to Bristol, 9.55.—W. M. BEAUMONT, NEWMAN NEILD, Honorary Secretaries.

BATH AND BRISTOL BRANCH.—Election of Representatives of the Branch upon the Central Council.—Nominations of candidates for election to the Central Council must be forwarded to the Honorary Secretaries not later than May 8th. The Branch is entitled to elect one member.—NEWMAN NEILD, Richmond Hill, Clifton; W. M. BEAUMONT, 4, Gay Street, Bath.

DORSET AND WEST HANTS BRANCH.—The spring meeting of this Branch will be held in Dorchester on Wednesday, May 5th. JAMES DAVISON, Honorary Secretary, "Stratcliffe," Bournemouth.

LANCASHIRE AND CHESHIRE BRANCH.—Election of Representatives of the Branch on the Council of the Association.—Nominations of candidates must be sent in writing on or before May 8th next to P. CHARLES LARKIN, Branch Secretary, 54, Rodney Street, Liverpool.

LANCASHIRE AND CHESHIRE BRANCH.—A general meeting of the Branch will be held on Wednesday, May 12th, at the New Manchester Royal Infirmary (by kind invitation of the Committee and Medical Board). Details will be published later.—F. CHARLES LARKIN, Branch Secretary.

METROPOLITAN COUNTIES BRANCH.—Nominations of Branch Officers.—Pursuant to By-law 25, notice is hereby given that nominations for all the officers of the Branch—namely, President-elect, Vice-Presidents, Secretary, and members of the Branch on the Central Council of the Association—must be sent in to the Honorary Secretary of the Branch on or before May 29th. Voting papers will be sent out on or before June 5th, and must be returned to the Secretary on or before June 12th.—ATWOOD THORNE, E. W. GOODALL, Honorary Secretaries.

METROPOLITAN COUNTIES BRANCH: LAMBETH DIVISION.—The next meeting of the Lambeth Division will be the annual general meeting, and it will be held on May 6th, at 4 p.m., in Bethlem Hospital. Agenda:—(1) Minutes of the previous meeting. (2) A matter referred to the Divisions from the Hospitals Committee, re contributions to hospitals by employers of labour and employees (see SUPPLEMENT, February 27th, 1909, p. 102). (3) Re sanatoriums for workers suffering from tuberculosis. The following motion is referred to the Divisions from the Annual Representative Meeting at Sheffield: "That, in the opinion of the Representative Meeting, it is not advisable that members of the Association should in future accept, or continue to hold, appointments as Honorary Local Medical Referees to the National Association for the Establishment and Maintenance of Sanatoria for Workers Suffering from Tuberculosis, and that the Divisions be requested to consider the matter as affecting any of their own members, or other practitioners, or their respective areas, who may hold such appointments." (4) To consider the following communication from the Chelsea and Fulham Division: "That we, the Chelsea and Fulham Division of the Metropolitan Counties Branch of the British Medical Association, deeply regret and resent the action of the Council of the Royal College of Surgeons of England, in that having ascertained the wishes of a majority of the Fellows and Members of their College, that they should deliberately dissent that opinion in the recent alteration of their By-laws, and that a copy of this resolution should be sent to the other Divisions of the British

Medical Association." (5) Election of officers for the ensuing session. The following names are suggested by the Executive Committee: *Chairman*, W. H. B. Stoddart, M.D.; *Vice-Chairman*, J. V. C. Denning, L.R.C.P.I.; *Honorary Secretary*, Herbert French, M.D., F.R.C.P.; *Representative at Representative Meetings*, "R. Esler, M.D.": *Representative upon the Branch Council*, R. Capes, Esq., M.R.C.S., L.R.C.P., and *Honorary Secretary of the Division ex officio: Executive Committee*, "E. A. Edelstein, M.B., M.R.C.S.," "W. E. Sturges-Jones, M.R.C.S., L.R.C.P.," "H. J. Spott, M.R.C.S., L.R.C.P.," G. F. Grant, M.B., T. H. P. Jones, L.M.S.S.A., V. A. James, M.R.C.S., L.R.C.P., W. A. Atkinson, M.D. "Those marked with an asterisk held this office last year." Members of the Division desirous of nominating other candidates for any of the above offices are requested to send the names of their nominees, duly seconded, together with a note to indicate the willingness of the nominee to accept the office if elected, to the Honorary Secretary of the Division, at 26, St. Thomas Street, S.E. (6) Dr. Hyslop will give clinical demonstrations upon cases from the wards of the Bethlem Royal Hospital. (7) Other business, if necessary. — HERBERT FRENCH, Honorary Secretary, Lambeth Division, 26, St. Thomas Street, S.E.

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS AND ISLINGTON DIVISION.—This Division will hold a meeting at the Midland Grand Hotel, King's Cross, on Tuesday, May 4th, at 9 p.m. Dr. Lauriston Shaw, Physician to Guy's Hospital, will open a discussion on Some Points in the Diagnosis of Gastric Disease. — W. GRIFFITH, Honorary Secretary.

MIDLAND BRANCH: LEICESTER AND RUTLAND DIVISION.—A meeting of this Division will be held in the Leicester Infirmary on Wednesday, April 28th, at 4.15 p.m. Agenda:—Minutes of previous meeting. Consideration of the following matters referred to Divisions: (1) Medical certification of suitability of patients for hospital treatment (SUPPLEMENT, February 27th); (2) Contributions to hospitals by employers of labour and employees (SUPPLEMENT, February 27th); (3) Relating to fresh public medical institutions; (4) Relating to sanatoriums for workers suffering from tuberculosis; (5) Relating to appointments as medical officers of health (SUPPLEMENT, January 23rd). Any other business. — WILFRED E. GIBBONS, Honorary Secretary.

SOUTH-EASTERN BRANCH.—The annual meeting of this Branch will be held at Croydon on Wednesday, June 23rd, Dr. J. J. Macan, President-elect, in the chair. The following will be the agenda:—(1) To elect the officers of the Branch; nominations by three members for the offices of President-elect, Vice-Presidents, and Secretary, may be sent to the Honorary Secretary on or before May 21st. (2) To receive the annual report of the Branch. (3) To transact any business that may be transacted by an ordinary meeting. Three members to represent the Branch on the Central Council will also be elected by voting papers. Nominations for these posts, each by three members in meeting, should be sent to the Honorary Secretary on or before May 21st. — H. M. STEWART, Honorary Secretary, Dulwich.

SOUTH-EASTERN OF IRELAND BRANCH.—The annual meeting of this Branch, as also a meeting of the Branch Council and the local Division, will be held at the Victoria Hotel, Kilkenny, on Wednesday, May 5th, at 5.15 p.m. Agenda:—(1) Minutes of last meeting. (2) Letters of apology. (3) Correspondence. (4) Installation of President-elect. (5) Election of officers of the Branch for the ensuing year. (6) Dr. Lafan's motion deferred. Any other business. Dinner. — J. QUIRKE, Honorary Secretary, Piltown.

SOUTH MIDLAND BRANCH.—In accordance with By-law 25, notice is hereby given that nominations for the election of a Representative of this Branch on the Central Council must be sent to me not later than May 22nd next. — E. HARRIES-JONES, 16, Castilian Street, Northampton.

SOUTH MIDLAND BRANCH: BEDFORD AND HERTS DIVISION.—A meeting of the Division will be held on Thursday, May 6th, at 5 p.m., at the County Hospital, Bedford. Business: Matters referred to Divisions: (1) Report on medical certificates of suitability of patients for hospital treatment. (2) Report on contributions to hospitals by employers of labour and employees. (3) Statement as to fresh public medical institutions. (4) Statement as to sanatoriums for workers suffering from tuberculosis (see SUPPLEMENT, February 27th). (5) Departmental Committee re Midwives Act.—E. H. COBB, Honorary Secretary, Belmont, Stevenage.

STAFFORDSHIRE BRANCH.—The third general meeting of the session will be held at the Victoria Hotel, Wolverhampton, on Thursday, April 29th. The President, Dr. S. King Alcock, will take the chair at 5.25 p.m. Business: (1) Minutes of the last general meeting. (2) Correspondence. (3) Exhibition of living cases. Papers:—(a) Dr. W. Spencer Badger: The Chest of the Elementary School Child. (b) Dr. J. A. Codd: The Treatment of Glandular Enlargements by X Rays. (4) Exhibition of Pathological Specimens, etc. Dinner at 7 p.m.; charge, 5s. A meeting of the council will be held immediately before the general meeting to fix the date of the annual council meeting. — G. PETGRAVE JOHNSON, Honorary General Secretary, Stoke-on-Trent.

ULSTER BRANCH.—The spring meeting of this Branch will be held in Londonderry on Saturday, May 8th. Members having communications to make to the meeting are requested to send particulars not later than April 30th to CECIL SHAW, Honorary Secretary, 29, University Square, Belfast.

British Medical Association.

GRANTS AND SCHOLARSHIPS FOR SCIENTIFIC RESEARCH.

GRANTS.

THE Council of the British Medical Association is prepared to receive applications from members of the Medical Profession for Grants in aid of Researches for the Advancement of Medicine and the Allied Sciences.

The Grants are made subject to the following conditions:

1. That the work of the Grantee shall be subject to inspection by the Science Committee of the Association.

2. That each Grantee shall furnish to the Science Committee, on or before May 15th following the allotment of the grant, a report (or, if the object of the grant be not then attained, an interim report, to be renewed not later than the same date in each subsequent year until the final report is presented) containing:

(a) A statement, in a form satisfactory to the Science Committee, of the results arrived at, or the stage which the inquiry has reached;

(b) A statement of expenditure incurred, accompanied by vouchers as far as possible;

(c) A reference to any Transactions, Journals, or other publications in which the results of the research have been announced.

SCHOLARSHIPS.

The Council of the British Medical Association is also prepared to receive applications for Research Scholarships, as follows:

1. AN ERNEST HART MEMORIAL SCHOLARSHIP, of the value of £200 per annum, for the study of some subject in the department of State Medicine.

2. THREE RESEARCH SCHOLARSHIPS, each of the value of £150 per annum, for research in Anatomy, Physiology, Pathology, Bacteriology, State Medicine, Clinical Medicine, or Clinical Surgery.

Each Scholarship is tenable for one year, but is renewable by the Council, provided that the whole period of tenure shall not exceed three years.

The Scholarships are awarded subject to the following conditions:

1. That the work of the Scholar shall be subject to inspection by the Science Committee of the Association.

2. That he shall furnish the Science Committee, on or before May 15th following the grant of the Scholarship, with a statement of the work done by him.

3. That he sign an undertaking to abide by the above and other regulations affecting Scholarships, a copy of which will be supplied to him.

Applications.

Applications for Grants and Scholarships for the year 1909-10 must be made, not later than May 27th, 1909, in the prescribed form, a copy of which will be supplied on application to the Medical Secretary, 429, Strand, London, W.C.

Each application should be accompanied by a recommendation from the head of the laboratory in which the applicant proposes to work, setting out the fitness of the candidate to conduct such work and the probable value of the work to be undertaken. This is not intended, however, to prevent applications for Grants in aid of work which need not be performed in a recognized laboratory.

J. SMITH WHITAKER, *Medical Secretary*.

429, Strand, W.C.,
March, 1909.

LOCAL EDUCATION AUTHORITIES (MEDICAL TREATMENT) BILL.

THIS bill was introduced by Mr. Walter Guinness on April 1st, and is supported by Mr. Adkins, Mr. Bridgeman, Lord Robert Cecil, Mr. Fell, Mr. H. C. Gooch, Mr. Leif Jones, Mr. Ramsay MacDonald, Mr. Maddison, Mr. Peel, Mr. Vivian, and Mr. Whitwell Wilson.

MEMORANDUM.

THIS bill proposes to enable local education authorities to recover the cost of the medical treatment of children, where such treatment is provided under section thirteen of the Education (Administrative Provisions) Act, 1907. Local education authorities already have power to recover the cost of meals from parents under the Education (Provision of Meals) Act, 1906. Parents who neglect to provide necessary medical aid are liable to conviction under section twelve of the Children's Act of 1908, but there is no power to enable the local authority to recover the cost of treatment.

A BILL to provide for the recovery by local education authorities of costs for medical treatment of children attending public elementary schools in England and Wales.

Be it enacted by the King's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:

1. *Recovery by Local Education Authority of Cost of Medical Treatment.*—Where any Local Education Authority provides for the medical treatment of children attending any public elementary school under section thirteen of the Education (Administrative Provisions) Act, 1907, there shall be charged to the parent of every child in respect of any treatment provided for that child such an amount not exceeding the cost of treatment as may be determined by the Local Education Authority, and in the event of payment not being made by the parent it shall be the duty of the Authority, unless they are satisfied that the parent is unable by reason of circumstances other than his own default to pay the amount, to require the payment of that amount from that parent, and any such amount may be recovered summarily as a civil debt.

2. *Franchise, Etc., to be Unaffected by Failure of Parents to Pay.*—The failure on the part of any parent to pay any amount demanded under this Act in respect of any medical treatment shall not deprive the parent of any franchise, right, or privilege, or subject him to any disability.

3. *Definition.*—In this Act the word "parent" shall have the same meaning as in the Elementary Education Act, 1870.

4. *Short Title.*—This Act may be cited as the Local Education Authorities (Medical Treatment) Act, 1909.

INFANT LIFE PROTECTION BILL.

THIS bill was introduced by Lord Robert Cecil on April 1st, and is supported by Mr. Shackleton, Mr. Chiozza Money, and Mr. Simon.

MEMORANDUM.

IT is felony punishable by penal servitude for life to procure miscarriage. It is murder to kill a fully-born child. To destroy a child while it is being born and before it is fully born is no offence whatever. The object of this bill is to put an end to this anomaly.

A BILL to Prevent the Destruction of Children during Birth.

Be it enacted by the King's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:

1. *Punishment for Destroying Life of Child during Birth.*—Any person who shall destroy the life of a child during the birth thereof, and before the same shall have been fully born, in such a manner that he would have been guilty of murder if the child had been fully born, shall be guilty of felony, and being convicted thereof shall be liable to penal servitude for life: Provided that a registered medical practitioner shall not be guilty of an offence under this Act who by means employed in good faith for

the preservation of the life of the mother of the child destroys the life of any such child during its birth.

2. *Alternative Verdict on Trial for Child Murder.*—If on any trial for the murder of a child it shall be proved that the person accused destroyed the life of such child, in such manner as aforesaid, but not that such child was fully born at the time at which its life was so destroyed, it shall be lawful for the jury to find that such person destroyed the life of such child, in such manner as aforesaid, and thereupon the court may pass such sentence as if such person had been convicted upon an indictment for the felony in the first section of this Act mentioned.

3. *Short Title.*—This Act may be cited as the Infant Life Protection Act, 1909.

NECESSITOUS MOTHERS (ASSISTANCE) BILL.

THIS Bill was introduced by Mr. Robert Harcourt on March 31st, and is supported by Mr. Pirie, Mr. Chiozza Money, and Mr. Barnes.

ARRANGEMENT OF CLAUSES.

Clause.

1. Optional power to local authorities to levy rate.
2. Terms on which assistance is to be provided.
3. Nature of assistance to be provided.
4. Co-operation with voluntary agencies and delegation of powers.
5. Acceptance of assistance not to disfranchise.
6. Definition.
7. Application to Scotland.
8. Act not to apply to Ireland.
9. Short title.

A BILL to empower Local Authorities to make provision for the Assistance of Necessitous Women in contemplation of and after Childbirth.

Be it enacted by the King's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:

1. *Optional Power to Local Authorities to Levy Rate.*—A local authority may provide such food, medical aid, nursing, and other accessories as shall be specified in the regulations hereinafter referred to for the purpose of assisting necessitous women during pregnancy and childbirth, and for a period of time after childbirth; and for this purpose may raise, by a rate, moneys not exceeding in any one year the amount which is produced by a rate of one penny in the pound within their area.

2. *Terms on which Assistance is to be Provided.*—The terms upon which such food, medical aid, nursing, and other things may be provided shall be defined in regulations to be made by the local authority and to be approved by the Local Government Board. Such regulations shall make it a condition for being eligible to receive assistance that the woman who applies for it shall comply with the regulations as to ceasing to work for wages for a specified time before and after childbirth, and as to obeying the orders of any doctor, nurse, or other person appointed by the local authority and as to any other matters therein specified.

3. *Nature of Assistance to be Provided.*—If a woman applies to the local authority and agrees to comply with such regulations the local authority may—

- (a) provide food and any other necessities for the woman during the latter half of the period of pregnancy;
- (b) provide medical assistance and nursing in relation to and during the confinement; and
- (c) provide food and other necessities for the woman during a period not exceeding six months after childbirth, but they may make it a condition as to supplying food or other necessities to the mother, that (if capable) she shall feed the infant child at the breast.

4. *Co-operation with Voluntary Agencies, and Delegation of Powers.*—The local authority shall so far as possible co-operate with and utilize all existing or future voluntary agencies, institutions, and societies which have as one of their objects anything which the local authority is empowered to do under this Act, and the local authority may delegate all or any of their powers under this Act to

any such voluntary institution or society, or to any body or bodies of persons or local committees which may be formed (in pursuance of regulations to be made by the Local Government Board) for the purpose of this Act.

5. *Acceptance of Assistance not to Disfranchise.*—The acceptance by a woman of any benefit under this Act shall not deprive her, her husband, or any relation of hers of any franchise, right, or privilege, or subject her or them to any disability.

6. *Definition.*—In this Act, local authority means in London a borough council, and in the rest of England the council of every county and of every county borough.

7. *Application to Scotland.*—In the application of this Act to Scotland, Local Government Board means the Local Government Board for Scotland, and local authority means the council of any county or burgh.

8. *Act not to Apply to Ireland.*—This Act shall not apply to Ireland.

9. *Short Title.*—The Act may be cited as the Necessitous Mothers (Assistance) Act, 1909.

OATHS BILL.

[As Amended by Standing Committee B.]

MEMORANDUM.

By Section 5 of the Oaths Act, 1883, it is open to a person to whom an oath is administered if he so desires to swear with uplifted hand in the form and manner in which an oath is usually administered in Scotland. Under this Act, however, judges, magistrates, coroners, and other persons do not consider themselves justified in suggesting this form of oath to the witness, jury, or deponent, and it is a question whether the oath ought to be so administered unless the witness or deponent voluntarily requests it to be done. Consequently, the old form of kissing the Book, to which there are many objections, still prevails.

The object of this Bill is to endeavour to make the administration of the oath by uplifted hand universal, and to enable the court to administer it in this form unless the person about to take the oath voluntarily objects thereto.

A BILL [as amended by Standing Committee B] to Amend the Law as to Oaths.

Be it enacted by the King's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:

1. *Short Title.*—This Act may be cited for all purposes as the Oaths Act, 1909, and the Oaths Act, 1883, and this Act may be cited together as the Oaths Acts, 1883 and 1909.

2. *Manner and Administration of Oaths to Witnesses by Courts.*—(1) Any oath may be administered and taken in the form and manner described in the schedule hereto.

(2) The officer shall (unless the person about to take the oath voluntarily objects thereto, or is physically incapable of so taking the oath) administer the oath in such form and manner without question.

3. *Definition.*—In this Act the word "officer" shall mean and include any and every person duly authorized to administer oaths.

4. *Commencement and Extent.*—(1) This Act shall come into operation on the first day of October nineteen hundred and nine.

(2) This Act shall not apply to Scotland.

SCHEDULE.

FORM AND MANNER OF ADMINISTERING OATH.

The officer administering the oath shall address the person taking the oath in the following form: "You swear by Almighty God that," and then proceed with the words of the oath prescribed by law, omitting any further words of imprecation or calling to witness; and the person taking the oath shall, with uplifted hand, say "I do."

If the oath is an oath which is customarily taken by the words of the oath being read or repeated after the officer administering it, the words shall be read or repeated with uplifted hand in the form following: "I do swear by Almighty God that," and then proceed with the words of the oath prescribed by law, omitting any further words of imprecation or calling to witness.

Nabal and Military Appointments.

EXCHANGE.

The charge for inserting notices respecting Exchanges in the Army Medical Department is 3s. 6d., which should be forwarded in stamps or post office order with the notice, not later than Wednesday morning, in order to ensure insertion in the current issue.

EXCHANGE wanted by senior Lieutenant-Colonel due for India beginning of September. Address, Lieutenant-Colonel Simpson, R.A.M. College, or by wire c/o. Jaspase, London.

ROYAL NAVY MEDICAL SERVICE.

The following appointments have been made at the Admiralty: Staff Surgeon J. VIBRON to the *Kinsha*, March 4th; Surgeon G. L. BUCKERIDGE to the *Astraea*, March 4th; Staff Surgeon E. FOLLIOTT and Surgeon R. KENNEDY, M.B., to the *Fortie*, April 20th; Surgeon G. A. BRADSHAW to the *Hindustan*, April 20th; Fleet Surgeon G. T. COLLINGWOOD, to the *Racer*, additional, for the Royal Naval College, Osborne; Fleet Surgeon J. SUGRE, M.D., to the *President*, additional, for the Royal Marine Recruiting Head Quarters; Fleet Surgeon J. L. THOMAS to the *Engle*; Fleet Surgeon W. E. HOYE, M.D., to the *Daedalus*, April 20th; Fleet Surgeon P. M. MAY to the *Vengeance*, April 20th, and to the *Trafalgar* on its becoming the parent ship, undated; Fleet Surgeon C. J. MANSFIELD, M.D., and Surgeon G. D. BATEMAN to the *Formidable*, on commissioning, April 20th; Staff Surgeon C. B. FAIRBANK, to the *Victorious*, on recommissioning, April 20th; Surgeon E. R. L. THOMAS to the *Crescent*, additional, for the *Edgar*, temporarily, April 15th.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

SURGEON-MAJOR S. G. MOORES, from the Scots Guards, to be Major, April 17th. He was appointed to the Scots Guards, November 16th, 1901. He has a medal with clasp for services with the Central Relief Force in 1895, and for the South African war in 1899-1902 he was promoted to be Major, and received the Queen's medal with six clasps and the King's medal with two clasps.

It is announced that Major C. C. FLEMING, D.S.O., M.B., is to take on the appointment of Instructor at the Training School at the Royal Army Medical School of Instruction at Aldershot on June 15th, vice Major J. D. FERGUSON, D.S.O.

Captain T. C. LUCAS, M.B., who is serving in India, is appointed Surgeon to His Excellency the Governor of Bombay, from February 1st.

INDIAN MEDICAL SERVICE.

LIEUTENANT-COLONEL R. W. S. LYONS, M.D., Bombay, is promoted to be Colonel, from January 15th. He entered the Bombay Medical Department as Surgeon, April 1st, 1882, and became Lieutenant-Colonel, April 1st, 1902.

SPECIAL RESERVE.

ROYAL ARMY MEDICAL CORPS.

CAPTAIN H. E. DALRY, having assented to be transferred, is appointed an Officer of the Special Reserve of Officers, retaining the rank and seniority which he held in the Militia, September 2nd, 1908.

MILITIA.

HONORARY SURGEON-MAJOR E. F. NELSON, M.D., 5th Battalion the Royal Irish Rifles, resigns his commission, retaining his rank and uniform, June 21st, 1908.

TERRITORIAL FORCE.

ROYAL ENGINEERS.

SURGEON-LIEUTENANT J. H. RHODES, 2nd London Divisional Engineers, resigns his commission, March 11th.

INFANTRY.

Honorary Assistant Surgeon J. R. HUCHER, 4th Battalion the Royal Welsh Fusiliers, is retired, under the conditions of para. 39, Territorial Force Regulations, with permission to retain his rank and uniform, April 1st.

ROYAL ARMY MEDICAL CORPS.

Second Northern General Hospital.—SURGEON-CAPTAIN A. L. WHITEHEAD, M.B., from the 1st West Riding Brigade Royal Field Artillery, to be Captain and to be an officer whose services will be available on mobilization, retaining his seniority as in the Royal Field Artillery, Territorial Force, February 25th.

For Attachment to Units other than Medical Units.—Major J. W. ELLIS to be Lieutenant-Colonel, June 15th, 1908. THOMAS H. LIVINGSTONE, M.D., F.R.C.S. Edin., to be Lieutenant, March 1st, 1909.

CHANGES OF STATIONS.

The following changes of stations amongst the officers of the Army Medical Service have been officially reported to have taken place during March:

Alexandra of Teck on April 3rd, a tablet to the late Sir Frederick Wills, its president from 1901 to 1909, being unveiled on the same occasion. The new building is part of a pavilion scheme which has been in progress for some years, and will be complete when an administrative block and nurses' quarter have been erected. Except that one of the two rooms intended for isolation purposes is at present used as an operating theatre, the ward part of the scheme is complete. It provides thirty-four beds and six cots. Compared with this, the out-patient work seems desultory. The new building is a handsome Georgian style, with entrances for male and female patients respectively on each side of a porter's lodge. These give access to square lobbies, whence the patients pass into a large waiting-room 56 ft. by 23 ft. Leading out of the entrance lobbies are lavatories. Communicating with the entrance hall are medical and surgical consulting rooms, each with its own examining room; a minor operation room with two recovery rooms attached, and a dental department consisting of three rooms. In addition, there is an ophthalmic consulting room with two dark rooms and an electrical department. From the consulting rooms the patients pass by a separate passage to a dispensary waiting room, and thence out into the street. Finally, a refreshment bar is to be found on one side of the waiting-hall. Out-patients at this institution are admitted by tickets which entitle them to free attendance as out-patients for six weeks; while for each supply of medicine or bandage they pay 2d. According to the rules, no person in receipt of Poor Law relief can be treated as an out-patient, nor, except on the recommendation of a medical practitioner, any one who is in receipt of an income of over 20s. a week, or who is a member of a family with a collective weekly income exceeding 30s.

GREAT NORTHERN CENTRAL HOSPITAL.

THE report submitted at the annual meeting of the Great Northern Central Hospital, on March 18th, showed that the cost per bed per year had been reduced by £2 4s. 10d., as compared with the previous year. The new children's ward provided by the Ladies' Association was now open, and the convalescent home, a gift from Mr. Francis Reekitt, was expected to be ready in July. Financially the net outcome of the year's work was a deficit of £4,643, raising the total indebtedness to £10,304. In default of speedy material assistance in getting rid of that debt a ward must be closed. Stress was laid by one speaker on the extreme disproportion between the support accorded to the hospital by the Borough of Islington in which it lies and the benefits received.

IRILEY HOSPITAL AND CONVALESCENT HOME.

THE annual meeting of the subscribers to this hospital took place on March 31st. The report stated that the admissions last year (including 154 renewals) numbered 693, bringing the total number of patients admitted since the hospital was erected in 1861 up to 37,322. Dr. T. Browne Hearder stated that of the admissions 517, or over 96 per cent., were either cured or improved, 3 per cent. were no better, and less than 1 per cent. were worse.

Vital Statistics.

VITAL STATISTICS OF LONDON DURING THE FIRST QUARTER OF 1909.

In the accompanying table will be found summarized the vital statistics of the City of London and of the metropolitan boroughs, based upon the Registrar-General's returns for the first quarter of the year. The mortality figures in the table relate to the deaths of persons actually belonging to the various boroughs, and are obtained by distributing the deaths occurring in institutions among the boroughs in which the deceased persons had previously resided. The 30,493 births registered in London during the three months under review were equal to an annual rate of 25.3 per 1,000 of the population, estimated at 4,833,938 persons in the middle of the year; in the corresponding years of the three preceding years the birth-rates were 27.8, 26.7, and 26.9 per 1,000, the average number of births in the ten years 1899-1908 being 29.1 per 1,000. The birth-rates last quarter ranged from 15.0 in the City of London, 14.0 in Hampstead, 15.8 in the City of Westminster, 18.3 in Kensington, 17.7 in Stoke Newington, and 19.5 in Chelsea, to 31.2 in Bethnal Green, 31.8 in Stepney, 32.3 in Bermondsey, 32.7 in Shoreditch, 32.8 in St. Marylebone, and 37.2 in Finsbury.

During last quarter 22,875 deaths of London residents were registered, equal to an annual rate of 19.0 per 1,000, against 16.0, 18.5, and 17.0 in the first quarters of the three preceding years; for the corresponding period of the ten years 1899-1908 the average death-rate was 18.6 per 1,000. Among the several boroughs the death-rates last quarter ranged from 12.3 in Hampstead, 13.1 in Lewisham, 15.0 in Woolwich, 15.7 in Fulham, 16.3 in Greenwich, and 16.4 in Stoke Newington, to 22.3 in Bethnal Green, 23.0 in Southwark, 24.9 in the City of London, 25.4 in Shoreditch, 25.9 in Finsbury, and 35.3 in Bermondsey.

The 22,875 deaths from all causes last quarter included 2,084 which were referred to the principal infectious diseases; of these, 1,147 resulted from measles, 109 from scarlet fever, 230 from diphtheria, 364 from whooping-cough, 52 from enteric fever, 174 from typhoid, and 1 from small-pox. These 2,084 deaths were equal to an annual rate of 1.72 per 1,000, or 0.13 per 1,000 more than the average rate from the same diseases in the ten preceding first quarters. The lowest death-rates from these diseases last quarter were 0.53 in Hampstead, 0.56 in the City of London, 0.67 in Holborn, 0.71 in Lewisham, 0.89 in the City of Westminster, and 0.95 in Paddington, and the highest rates were 2.24 in Poplar, 2.34 in Deptford, 2.44 in Bethnal Green, 2.49 in Southwark, 3.21 in Shoreditch, and 5.46 in Bermondsey. The greatest proportional mor-

Hospitals and Asylums.

ROYAL VICTORIA HOSPITAL, BELFAST.

THE 116th annual meeting of this institution was held at the hospital on March 31st. The Lord Mayor, Sir Robert Anderson, occupied the chair. The medical and surgical reports were read by Dr. R. J. Johnstone, honorary secretary of the visiting staff. There had been 1,375 new medical and 1,961 new surgical cases. Of the 193 deaths, 26 had been admitted moribund, and of the remainder 95 were medical and 77 surgical; 1,427 operations had been performed, with 66 deaths, giving a mortality of 4.62 per cent.; 50,041 new cases had been treated in the out-patient department. Dr. Johnstone, in moving the adoption, urged the necessity of the use of the yet unopened wards and of larger Roentgen-ray accommodation.

THE ROYAL BOSCOMBE AND WEST HANTS HOSPITAL.

A NEW out-patient department at the West Hants Hospital at Boscombe, Bournemouth, was formally opened by Princess

Analysis of the Vital Statistics of the Metropolitan Boroughs and of the City of London after Distribution of Deaths occurring in Public Institutions during the First Quarter of 1909.

tality from measles was recorded in St. Pancras, Shoreditch, Bethnal Green, Stepney, Southwark, Bernoldsey, and Deptford; from scarlet fever in Chelsea, Stoke Newington, Holborn, Finsbury, Bethnal Green, Poplar, and Woolwich; from diphtheria in Fulham, Chelsea, Stepney, Lambeth, Camberwell, Deptford, and Woolwich; from whooping-cough in Paddington, Hammersmith, Fulham, Finsbury, Shoreditch, Bernoldsey, and Battersea; from "fever" in Kensington, Shoreditch, Poplar, Stoke Newington, Hackney, Holborn, and Deptford; and from diarrhoea in Hackney, Shoreditch, Bethnal Green, Stepney, Poplar, Southwark, and Lewisham. The fatal case of small-pox belonged to the City of Westminster.

During the three months ending March last the deaths from phthisis among persons belonging to London numbered 1,992, at a rate equal to an annual rate of 1.65 per 1,000, against 1.53, 1.75, and 1.56 in the first quarters of the three preceding years. The death-rates in the first quarter last quarter ranged from 0.72 in Hampstead, 0.90 in Lewisham, 1.03 in Stoke Newington, 1.16 in Paddington, 1.17 in Wandsworth, and 1.18 in Hammersmith to 2.17 in Bethnal Green, 2.35 in Bernoldsey, 2.28 in Southwark, 2.31 in Shoreditch, 2.43 in the City of London, 2.61 in Holborn, and 3.24 in Finsbury.

Infant mortality, measured by the proportion of deaths among children under 1 year of age to registered births, was equal to 112 per 1,000 last quarter, against 115, 132, and 110 in the corresponding quarters of the three preceding years. The lowest rates last quarter were recorded in St. Marylebone, Hampstead, Stoke Newington, Holborn, the City of London, Lewisham, and Woolwich; and the highest rates in Chelsea, Shoreditch, Bethnal Green, Poplar, Bernoldsey, and Southwark.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 8,524 births and 5,337 deaths were registered during the week ending Saturday last, April 17th. The annual rate of mortality in these towns, which had been 19.8, 17.9, and 17.0 per 1,000 in the three preceding weeks, rose again to 17.1 last week. The rates in the several towns ranged from 8.5 in King's Norton, 8.7 in Leyton, 10.4 in Hornsey, 10.7 in Willesden, 11.4 in West Bromwich, and 12.0 in West Hartlepool, 11.3 in Derby, and 11.5 in East Ham, to 22.3 in Swansea, 22.4 in Salford and in Preston, 23.0 in St. Helens, 23.3 in Oldham, 24.8 in Bootle, 27.1 in Truro, 28.3 in Great Yarmouth. In London the rate of mortality was 17.3 per 1,000, while it averaged 17.2 in the seventy-four other large towns. The death-rate from the principal infectious diseases averaged 1.9 per 1,000 in the seventy-six towns; in London this death-rate was equal to 2.1 per 1,000, while among the seventy-four other large towns the rate was 1.7. From these diseases ranged upwards to 3.5 in Preston and in Sheffield, 3.7 in Smeethwick, 5.3 in Bootle, 6.5 in Warrington, and 6.6 in St. Helens. Measles caused a death-rate of 2.0 in Liverpool, 2.1 in East Ham, and Walsall, 2.2 in Nottingham, 2.3 in Wigan, and 2.5 in Devonport, 3.0 in Sheffield, 3.6 in Warrington, 3.7 in Smeethwick, 5.3 in Bootle, and 6.0 in St. Helens; scarlet fever of 1.4 in Warrington; diphtheria of 1.2 in Rhondda; whooping-cough of 1.3 in Croydon, 2.6 in Preston, and 2.9 in Grimsby; and diarrhoea of 1.2 in Aston Manor and 1.5 in Burnley. The mortality from enteric fever showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The number of scarlet fever patients under treatment in the Metropolitan Asylums was 2,571, and the London Fever Hospital at the end of the week was 2,294, against 2,571, 2,462, and 2,418 at the end of the three preceding weeks; 244 new cases were admitted during the week, against 327, 373, and 256 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

DURING the week ending Saturday last, April 17th, 1,041 births and 656 deaths were registered in eight of the principal Scottish towns. The annual rate of mortality in these towns, which had declined from 21.6 to 17.7 per 1,000 in the five preceding weeks, rose again to 18.4 per 1,000 last week, and was 1.5 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scottish towns the death-rates ranged from 8.5 in Leith and 17.5 in Aberdeen to 19.4 in Dundee and 22.0 in Perth. The death-rates from the principal infectious diseases averaged 2.7 per 1,000 in these eight towns, the highest rates being recorded in Glasgow and Paisley. The 323 deaths registered in Glasgow included 4 which were referred to scarlet fever, 4 to diphtheria, 44 to whooping-cough, 4 to enteric fever, and 115 to diarrhoea. Five fatal cases of whooping-cough were recorded in Edinburgh; 5 of diarrhoea in Aberdeen; 4 of measles, 2 of diphtheria, and 2 of whooping-cough in Paisley; and 4 of whooping-cough in Greenock and 2 in Perth.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, April 10th, 589 births and 534 deaths were registered in the twenty-two principal urban districts of Ireland, as against 589 births and 534 deaths in the preceding period. The annual death-rate in these districts, which had been 25.1, 25.1, and 24.2 per 1,000 in the three preceding weeks, rose to 24.5 per 1,000 in the week under notice, this figure being 7.4 per 1,000 higher than the mean annual death-rate in the seventy-six English towns for the corresponding period. The figures in Dublin and Belfast were 25.5 and 27.0 respectively, those in other districts ranging from 5.3 in Tralee and 9.7 in Waterford to 35.3 in Ballinacorney and 40.1 in Newtownards, while Cork stood at 22.6, Londonderry at 18.1, and Limerick at 19.7. The zymotic death-rate in the twenty-two districts averaged 1.4 per 1,000, as against 2.0 per 1,000 in the preceding period.

During the week ending Saturday, April 17th, 650 births and 580 deaths were registered in the twenty-two principal urban districts of Ireland, as against 589 births and 534 deaths in the preceding period. The annual death-rate in these districts, which had been 25.1, 24.2, and 24.5 per 1,000 in the three preceding weeks, rose to 25.5 per 1,000 in the week under notice, this figure being 7.4 per 1,000 higher than the mean annual death-rate in the seventy-six English towns for the corresponding period. The figures in Dublin and Belfast were 27.7 and 27.8 respectively, those in other districts ranging from 8.4 in Newry and 9.5 in Sligo to 34.4 in Armagh and 48.7 in Lurgan; while Cork stood at 30.1, Londonderry at 25.4, Limerick at 25.5, and Waterford at 23.4. The zymotic death-rate in the twenty-two districts averaged 1.6 per 1,000, as against 1.4 per 1,000 in the preceding period.

		19 WEDNESDAY ..	CARDIFF DIVISION, <i>South Wales and Monmouthshire Branch</i> , Annual Meet- ing, Cardiff.

ANNUAL MEETING, BRITISH MEDICAL ASSOCIATION, BELFAST, 1909.

THE Seventy-seventh Annual Meeting of the British Medical Association will be held at Belfast from July 23rd, to July 31st, 1909, under the Presidency of Sir William Whitla.

The Annual Representative Meeting commences in Belfast on July 23rd. The Presidential Address will be delivered on July 27th. The Sections will meet on July 28th, 29th, and 30th.

A preliminary programme of arrangements was published in the SUPPLEMENT of April 17th, p. 174. The Honorary Local Secretaries are: Henry Lawrence McKisack, M.D., M.R.C.P., 17, University Square, Belfast; Cecil Edward Shaw, M.A., M.D., M.Ch., 29, University Square, Belfast; and Howard Stevenson, B.A., M.B., F.R.C.S.I., 2, College Square North, Belfast.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

THE British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the BRITISH MEDICAL JOURNAL is supplied weekly, post free, to every member of the British Medical Association, wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

Law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every

Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three Members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the BRITISH MEDICAL JOURNAL for non-members is £1 8s. 0d. for the United Kingdom, and £1 15s. 0d. for abroad.

SUPPLEMENT TO THE BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, MAY 1ST, 1909.

THE SEVENTY-SEVENTH ANNUAL MEETING OF THE BRITISH MEDICAL ASSOCIATION, **BELFAST,** JULY 23RD TO JULY 31ST, 1909.

President:

President-elect:

Sir WILLIAM WHITLA, M.D., LL.D., Professor of Materia Medica and Therapeutics, Queen's College, Belfast.

Past-President:

HENRY DAVY, Hon.D.Sc., M.D., F.R.C.P.Lond., Physician, Royal Devon and Exeter Hospital, Exeter.

Chairman of Representative Meetings:

JAMES ALEXANDER MACDONALD, M.D., M.Ch., R.U.I., Physician, Taunton and Somerset Hospital.

Chairman of Council:

EDMUND OWEN, Hon.D.Sc., LL.D., F.R.C.S., Consulting Surgeon to St. Mary's Hospital, London.

Treasurer:

EDWIN RAYNER, M.D.Lond., F.R.C.S., Consulting Surgeon, Stockport Infirmary, Stockport.

The Seventy-seventh Annual Meeting of the British Medical Association will be held in Belfast in July, 1909. The President's address will be delivered on Tuesday, July 27th, and the Sections will meet on the three following days. The Annual Representative Meeting will begin on Friday, July 23rd, 1909.

PROGRAMME OF BUSINESS.

The Address in Medicine will be delivered by ROBERT W. PHILIP, M.D., F.R.C.P.Edin., Physician, Royal Infirmary, and Royal Victoria Consumption Hospital, Edinburgh.

The Address in Surgery will be delivered by ARTHUR EDWARD JAMES BARKER, F.R.C.S., Professor of the Principles and Practice of Surgery, University College, London.

The Address in Obstetrics will be delivered by Sir JOHN W. BYERS, M.D., Professor of Midwifery and Diseases of Women, Queen's College, Belfast.

The Popular Lecture will be delivered by Dr. J. A. MACDONALD, Physician to the Taunton and Somerset Hospital, Chairman of the Representative Meetings.

THE SECTIONS.

The scientific business of the meeting will be conducted in fifteen Sections, which will meet on Wednesday, July 28th, Thursday, July 29th, and Friday, July 30th.

The President, Vice-Presidents, and Honorary Secretaries of each Section constitute a Committee of Reference for that Section, and exercise the power of inviting, accepting, or declining any paper, and of arranging the order in which accepted papers shall be read. Communications with respect to papers should be addressed to one of the Honorary Secretaries.

A paper read in the Section must not exceed fifteen minutes, and no subsequent speech must exceed ten minutes.

Papers read are the property of the British Medical Association, and cannot be published elsewhere than in the BRITISH MEDICAL JOURNAL without special permission.

The following are the general arrangements so far as they are yet complete:

ANATOMY AND PHYSIOLOGY.

President: CHARLES SCOTT SHERRINGTON, M.D., F.R.S., Physiological Laboratory, University, Liverpool.

Vice-Presidents: Professor THOMAS HUGH MILROY, M.D., F.R.S.E., Queen's College, Belfast; Professor PETER THOMPSON, M.D., King's College, Strand, London; ARTHUR PHILIP BEDDARD, M.D., F.R.C.P., 44, Seymour Street, Portman Square, London, W.; Professor ANDREW FRANCIS DIXON, M.B., D.Sc., 73, Grosvenor Road, Dublin.

Honorary Secretaries: ALEX. LOW, M.B., 142, Blenheim Place, Aberdeen; JOHN ALEX. MILROY, M.D., Queen's College, Belfast.

DERMATOLOGY AND ELECTRO-THERAPEUTICS.

President: WILLIAM CALWELL, M.D., 6, College Gardens, Belfast.

Vice-Presidents: ROBERT BRIGGS WILD, M.D., 96, Mosley Street, Manchester; LESLIE ROBERTS, M.D., 46, Rodney Street, Liverpool.

Honorary Secretaries: JAMES HARRY SEQUEIRA, M.D., F.R.C.P., 8A, Manchester Square, London; S. ERNEST DORE, M.D., 26, New Cavendish Street, London; JOHN CAMPBELL RANKIN, M.D., 38, University Road, Belfast.

A discussion will be held on the Treatment of Skin Diseases by Radium and Radio-therapy.

DISEASES OF CHILDREN.

President: HAROLD J. STILES, F.R.C.S. Edin., 9, Great Stuart Street, Edinburgh.

Vice-Presidents: JOHN McCRAW, M.D., 74, Dublin Road, Belfast; RICHARD WHYTOCK LESLIE, M.D., "St. Heliers," Strandown, Belfast; ROBERT CAMPBELL, F.R.C.S., 21, Great Victoria Street, Belfast.

Honorary Secretaries: ANDREW FULLERTON, F.R.C.S.I., 8, University Square, Belfast; JOHN WILLIAM SIMPSON, M.D., 19, Lansdowne Crescent, Edinburgh.

It is proposed to devote some portion of three of the days on which the Section meets to the discussion of the following subjects:

Wednesday, July 28th.—Club Foot.

Thursday, July 29th.—Functional Neuroses in Children.

HAEMATOLOGY AND VACCINE THERAPY.

President: SIR ALMROTH WRIGHT, M.D., F.R.S., 6, Park Crescent, Regent's Park, London, N.W.

Vice-Presidents: ALEX. GARDNER ROBB, M.B., 15, University Square, Belfast; THOMAS HUSTON, M.D., 95, Great Victoria Street, Belfast; Captain STEWART RANKIN DOUGLAS, I.M.S., Inoculation Department, St. Mary's Hospital, London.

Honorary Secretaries: WILLIAM DUNLOP DONNAN, M.D., 12, High Street, Holywood, Co. Down; DUDLEY W. CARMALT-JONES, M.B., B.Ch. Oxon., 78, Wimpole Street, London, W.

The subjects which have been chosen for discussion are:

Wednesday, July 28th.—Papers on separate subjects: Dr. Houston, Typhoid Carriers. Captain Douglas, Bacteriology of Cystitis; discussion. Dr. Fleming, Bacteriology and Vaccine Treatment of Acne.

Thursday, July 29th.—Discussion: The Early Diagnosis of Tuberculosis, opened by Professor Calmette, l'Institut Pasteur de Lille.

Friday, July 30th.—Discussion: Bacterial Infections of the Respiratory Tract other than Tuberculous.

HYGIENE AND PUBLIC HEALTH.

President: LOUIS COLTMAN PARKES, M.D., 61, Cadogan Square, Chelsea, London.

Vice-Presidents: SAMUEL AGNEW, M.D., Lurgan, co. Armagh; HENRY O'NEILL, M.D., 6, College Square East, Belfast; CHARLES KILLICK MILLARD, M.D., Town Hall, Leicester.

Honorary Secretaries: CHARLES PORTER, M.D., Public Health Department, Town Hall, Finsbury; WILLIAM McLORINAN, L.R.C.P., 103, Antrim Road, Belfast; THOMAS CARNWATH, M.B., Town Hall, Manchester.

The following subjects have been suggested for discussion:

1. The Compulsory Notification of all forms of Tuberculosis and the Mortality from Tuberculous Diseases in relation to Sex. To be opened by Dr. Harold Scurfield, Medical Officer of Health, Sheffield.

2. Latent Infections of the Diphtheria Bacillus, and the Administrative Measures required for dealing with Contacts. (Joint discussion with the Laryngological Section.)

3. The Discharge of Sewage Effluents into Tidal Waters.

The following additional subjects are also suggested:

1. Enteric Fever Carriers and Paratyphoid Bacilli.

2. Ventilation of Sewers and House Drains and the Disconnection Trap.

3. The Medical Officer of Health and School Medical Inspection.

LARYNGOLOGY, OTOTOLOGY, AND RHINOLOGY.

President: ST. CLAIR THOMSON, M.D., F.R.C.P., 28, Queen Anne Street, London.

Vice-Presidents: ERNEST BLECHYNDEN WAGGETT, M.B., 45, Upper Brook Street, London, W.; V. P. HENRY SMURTHWAITE, M.D., 8, St. Mary's Place, Newcastle-on-Tyne; J. A. KNOWLES RENSHEAW, M.D., 11, St. John Street, Manchester.

Honorary Secretaries: HAROLD SHUTTLEWORTH BARWELL, F.R.C.S., 55, Wimpole Street, London; JOHN STODDART BARR, M.B., 13, Woodside Place, Glasgow; HENRY HANNA, M.B., B.Sc., 57, University Road, Belfast.

The following subjects have been selected for special discussion:

Wednesday, July 28th.—The Treatment of Tinnitus Aurium. (1) Dr. Thomas Barr (Glasgow); (2) Mr. Richard Lake (London).

Thursday, July 29th.—Latent Infections of the Diphtheria Bacillus, including the Administrative Measures required for dealing with Contacts. (In association with the Section of Hygiene and Public Health.) (1) Dr. Robert M. Buchanan (Glasgow); (2) Dr. Duncan Forbes (Brighton); (3) Dr. P. Watson Williams (Bristol).

Friday, July 30th.—The Treatment of Cicatricial Stenoses of the Larynx and Trachea. (1) Dr. H. Lambert Lack (London); (2) Dr. Delsaux (Brussels); (3) Dr. Bryson Delavan (New York).

It is proposed this year to arrange a special exhibition of skiagraphy in relation to diseases of the upper air and food passages. Members are requested to send in the titles and descriptions of any skiagraphs they propose to contribute to Dr. Hanna not later than June 1st, so that they may be printed in the catalogue. Every card will be taken of negatives and prints, which should be carefully labelled with the owner's name and address.

MEDICINE.

President: Professor JAMES ALEXANDER LINDSAY, M.D., F.R.C.P., 3, Queen's Elms, Belfast.

Vice-Presidents: ARTHUR FOXWELL, M.D., F.R.C.P., 47, Newhall Street, Birmingham; JOSEPH FRANCIS O'CARROLL, M.D., F.R.C.P.I., 43, Merrion Square, Dublin; LAURISTON ELMIE SHAW, M.D., F.R.C.P., 64, Harley Street, London; WILLIAM BAIRD MCQUITT, M.D., 8, College Square East, Belfast.

Honorary Secretaries: JOHN SMYTH MORROW, M.D., Eia House, Antrim Road, Belfast; LEWIS ALBERT SMITH, M.D., 25, Queen Anne Street, London, W.; JOHN ELDER MACLWAIN, M.D., 55, University Road, Belfast.

The following subjects are suggested for discussion:

- Wednesday, July 28th.—Metabolism.
- Thursday, July 29th.—The Medical Aspects of Athleticism; Adolescent Albuminuria, or Mucous Colitis.
- Friday, July 30th.—A Demonstration on Gastric Illumination.

NAVY, ARMY, AND AMBULANCE.

President: Fleet Surgeon J. LLOYD THOMAS, R.N.

Vice-Presidents: Inspector-General ROBERT BENTHAM, R.N. (retired), 22, King's Avenue, Ealing, London, W.; Lieut.-Colonel R. PORTER, R.A.M.C., P.M.O., Station Hospital, Military Barracks, Belfast; Colonel THOMAS H. HENDLEY, I.M.S., C.I.E., 4, Loudon Road, London, N.W.

Honorary Secretaries: Captain M. LOWSLEY, R.A.M.C., St. Michael's Road, Aldershot; Captain HERBERT HUGH BLAIR CUNNINGHAM, M.D., F.R.C.S., 69, University Road, Belfast; Surgeon EDMUND COX, M.B., R.N., The Royal Naval Hospital, Chatham; Captain WILLIAM SALISBURY-SHARPE, R.A.M.C., 8, Cleveland Terrace, Hyde Park, London, W.

The Committee of this Section suggest the following subjects:

1. Effect on Health of Service in Submarine Boats.
2. Conditions of Life in Boys' Training Establishments on Shore.
3. Medical Arrangements for War in Ships of Dreadnought type.
4. A Detailed Scheme for an Unexpected Landing Party, using Material available on Board Ship.
5. Pitfalls for the Recruiting Medical Officer.
6. Probable Effects in the Services of the New Treatment of Syphilis by means of Organic Arsenical Compounds.
7. On the Importance of the Permanent Attachment of Ample Transport under the Command of the Medical Officer to each Field Medical Unit.
8. The Infective Pneumonias, their Incidence, Causes, Prevention, and Treatment during a Campaign.
9. On the Existing Ambulance Organization of the Home Railway Companies, with Suggestions for its Amplification and Unification.
10. The Effects of Recent Research on the Work of Colonial Medical Officers.
11. Diagnosis and Treatment of Pulmonary Tuberculosis in the Services.
12. Collection and Disposal of Wounded in War.

OBSTETRICS AND GYNAECOLOGY.

President: JOHN CAMPBELL, M.D., F.R.C.S., Crescent House, University Road, Belfast.

Vice-Presidents: ROBERT ALEXANDER GIBBONS, M.D., 29, Cadogan Place, London; JOHN SINGLETON DARLING, M.B., High Street, Lurgan; CHARLES EDWIN PURSLOW, M.D., 192, Broad Street, Birmingham; EWEN JOHN MACLEAN, M.D., 12, Park Place, Cardiff.

Honorary Secretaries: HENRY THOMAS HICKS, F.R.C.S., Derby; ROBERT JAMES JOHNSTONE, M.B., F.R.C.S., 14, University Square, Belfast.

The Committee have thought it well to select two chief subjects for discussion:

1. The Treatment of the Graver Forms of Puerperal Sepsis.
2. Endometritis.

In the Pathological Part of this Section, Cancer of the Uterus has been chosen as one affording a wide scope for the exhibition of Specimens, Photographs, Microscopic Slides, etc.

These, with any others of interest, will be exhibited in the Pathological Museum.

OPHTHALMOLOGY.

President: JOHN WALTON BROWNE, M.D., 10, College Square North, Belfast.

Vice-Presidents: ARTHUR W. SANDFORD, M.D., 13, St. Patrick's Place, Cork; WILLIAM MARCUS KILLEN, M.D., 9, Clifton Street, Belfast; ALEX. HILL GRIFFITH, M.D., 17, St. John Street, Manchester.

Honorary Secretaries: JAMES ANDREW CRAIG, F.R.C.S., 11, University Square, Belfast; LESLIE JOHNSTON PATON, F.R.C.S., 1, Spanish Place, Manchester Square, London.

The subjects chosen for discussion are:

1. Eye Injuries in their Relation to the Workmen's Compensation Act.
2. Vascular Diseases of the Retina.
3. The Diseases of the Lymphoid Tissue of the Conjunctiva (Mr. Treacher Collins).

PATHOLOGY.

President: Professor WM. ST. CLAIR SYMMERS, M.B., Queen's College, Belfast.

Vice-Presidents: WALTER SYDNEY LAZARUS-BARLOW, M.D., Cancer Research Laboratory, Middlesex Hospital, London; ARTHUR EDWARD MOORE, M.B., Castlemahon, Blackrock, Cork; ASTLEY VAYASOUR CLARKE, M.D., 37, London Road, Leicester; Professor I. WALKER HALL, M.D., 9, Royal Park, Clifton, Bristol.

Honorary Secretaries: ALFRED EDWARD BARNES, M.B., 348, Glossop Road, Sheffield; OTTO F. F. GRUNBAUM, M.D., 34, Wimpole Street, London, W.; WILLIAM JAMES WILSON, M.D., Pathological Laboratory, Queen's College, Belfast.

PHARMACOLOGY AND THERAPEUTICS.

President: Professor RALPH STOCKMAN, M.D., F.R.S. Edin., The University, Glasgow.

Vice-Presidents: Professor WALTER ERNEST DIXON, M.D., Pharmacological Laboratory, Cambridge; NEWMAN NEILL, M.D., 9, Richmond Hill, Clifton, Bristol.

Honorary Secretaries: VICTOR GEORGE LEOPOLD FIELDEN, M.B., 84, Dublin Road, Belfast; HECTOR CHARLES CAMERON, M.B., Guy's Hospital, London, S.E.

The following subjects have been suggested for discussion:

1. Spinal Anaesthesia.
2. The Treatment of Oedema.

PSYCHOLOGICAL MEDICINE.

President: T. OUTTERSON WOOD, M.D., 40, Margaret Street, Cavendish Square, London.

Vice-Presidents: GEORGE ROBERT LAWLESS, F.R.C.S.I., District Asylum, Armagh; WM. RICHARD DAWSON, M.D., Farnham House, Finglas, co. Dublin; ROBERT HENRY COLE, M.D., 25, Upper Berkeley Street, London, W.; MICHAEL JAMES NOLAN, L.R.C.P. and S.I., Down District Asylum, Downpatrick.

Honorary Secretaries: WALTER SAMUEL SMYTH, M.B., District Asylum, Antrim; SIDNEY HERBERT CLARKE, M.B., Leicester and Rutland Asylum, Narborough, Leicestershire.

The following subjects have been selected for special discussion in this Section:

- July 28th.—(1) Somatic Delusions and Local Lesions. To be opened by Dr. C. A. Mercier.
- July 29th.—(2) The Sociological Relations of Insanity in Ireland. To be opened by Dr. M. J. Nolan.
- July 30th.—(3) Considerations upon the Commissioner's Report of the Cave and Control of the Feeble-minded. To be opened by Dr. W. R. Dawson.

SURGERY.

President: Professor THOMAS SINCLAIR, M.D., F.R.C.S.,
22, University Square, Belfast.

Vice-Presidents: CHARLES ALFRED BALLANCE, M.V.O.,
M.S., F.R.C.S., 106, Harley Street, W.; Sir PETER
O'CONNELL, M.D., 9, College Square North, Belfast;
ARTHUR JOHN DREW, F.R.C.S., Water Hall, St. Aldate's,
Oxford; JOHN GALWAY COOKE, M.B., City and County
Infirmary, Londonderry; ARTHUR BROWNLOW MITCHELL,
F.R.C.S.I., 18, University Square, Belfast.

Honorary Secretaries: W. THELWALL THOMAS, F.R.C.S.,
84, Rodney Street, Liverpool; G. LENTHAL CHEATLE, C.B.,
F.R.C.S., 117, Harley Street, London; HOWARD STEVENSON,
M.B., F.R.C.S.I., 2, College Square North, Belfast;
JAS. BERNARD MOORE, M.B., 11, Clifton Street, Belfast.

TROPICAL MEDICINE.

President: CHARLES WILBERFORCE DANIELS, M.B., London
School of Tropical Medicine, Albert Docks, London.

Vice-Presidents: Lieutenant-Colonel ANDREW DEANE,
I.M.S., Royal Victoria Hospital, Belfast; Surgeon-General
W. R. BROWN, M.D., C.I.E., 5, Royal Crescent, Holland
Park Avenue, London.

Honorary Secretaries: JAMES COLVILLE, M.D., 7, Uni-
versity Square, Belfast; Dr. ANTON BREINL, Director
Runcorn Research Laboratories.

The following subjects have been selected for discussion:

Wednesday, July 28th, 10 a.m.—Persistence of the
Tropical Diseases of Man due to Protozoa. The discus-
sion will be opened by the President.

Thursday, July 29th, 10 a.m.—Treatment of Chronic
Recurrent Dysentery, with Special Reference to the Possi-
bilities of Surgical Treatment. The discussion will be
opened by Mr. J. Cantlie.

Friday, July 30th, 10 a.m.—Feeding and Treatment of
Children in the Tropics. The discussion will be opened
by Dr. W. Carnegie Brown.

The Committee will be glad to receive pathological
specimens, photographs, drawings, or microscopical pre-
parations illustrative of any subject in Tropical Medicine.

PROVISIONAL TIME TABLE.

FRIDAY, JULY 23RD, 1909.

11 A.M.—Annual General Meeting followed by Repre-
sentative Meeting.

SATURDAY, JULY 24TH, 1909.

9.30 A.M.—Representative Meeting.

MONDAY, JULY 26TH, 1909.

10 A.M.—Representative Meeting.

7.30 P.M.—Annual Conference of Secretaries of Divisions
and Branches.

TUESDAY, JULY 27TH, 1909.

SATURDAY, JULY 31ST, 1909.
Excursions.

Honorary Local Secretaries—

HENRY LAWRENCE MCKISACK, M.D., M.R.C.P.,
17, University Square, Belfast.

Cecil EDWARD SHAW, M.A., M.D., M.Ch.,
29, University Square, Belfast.

HOWARD STEVENSON, B.A., M.B., F.R.C.S.I.,
2, College Square North, Belfast.

THE PATHOLOGICAL MUSEUM.

The following Committee has been appointed to organize
the pathological museum:

President: Professor W. ST. CLAIR SYMMERS.

Honorary Secretaries: THOMAS HOUSTON, M.D.;
W. J. WILSON, M.D.

J. S. DICKIE, M.B.	C. H. P. D. GRAVES, M.D.
ROWLAND HILL, M.B.	(Cookstown).
C. G. LOWRY, M.D.	Professor McWEENEY (Dublin).
J. E. MACILWAINE, M.D.	Professor MOORE (Cork).
JOHN M'LEISH, M.B.	C. H. NESEITT, M.D. (Randals-
W. J. MAGUIRE, M.D.	town).
J. C. RANKIN, M.D.	Professor O'SULLIVAN (Dublin).
FRED. SMYTH, M.D.	R. T. ROWLETTE, M.D. (Dublin).
ERNEST WALES, M.D.	Professor WHITE (Dublin).
J. SINGLETON DARLING, M.D.	JOHN WILSON, M.D. (Castle-
(Lurgan).	blaney).

EX-OFFICIO MEMBERS.

The President-elect: Sir WILLIAM WHITLA, M.D., LL.D.

The Local Honorary Treasurer: JOSEPH NELSON, M.D.

The Local Honorary Secretaries: H. L. MCKISACK, M.D.; C. E. SHAW, M.D.; HOWARD STEVENSON, F.R.C.S.I.

The Committee propose that the material should be
arranged under the following heads:

- I. Exhibits bearing on discussions and papers in the
various sections.
- II. Specimens and illustrations relating to any research
work.
- III. Instruments relating to clinical diagnosis and
pathological investigation.
- IV. Individual specimens of special interest, or a series
illustrating some special subject.

It is also proposed to make a special effort to gather
together a series of exhibits relating to:

- (a) Tuberculosis.
- (b) Diseases of warm climates.
- (c) Cancer of the uterus.
- (d) X-rays and photography.

The Committee wish it to be understood that the above-
are only suggestions, and if there is any subject in which
Members are specially interested, and of which interesting
specimens can be supplied, they will be glad to hear from
them.

The Museum will occupy a central position, and will be
easy of access.

It is hoped that it will be possible for arrangements to
be made whereby exhibitors may have an opportunity of
demonstrating their specimens.

THOMAS HOUSTON,

W. J. WILSON,

Honorary Secretaries.

Communications should be addressed to one of the
Honorary Secretaries at Queen's University, Belfast.

RECREATIONS.

Golf Competition.—The Ulster Medical Society has
arranged to present to the British Medical Association a
cup, to be known as the "Belfast Cup," to be played for
at annual meetings, and to be won out and out by any
member winning it three times. It will be played for on
the Friday of the Belfast meeting, on the fine links of the
County Down Club at Newcastle, co. Down, kindly lent for

the day by the council and members of the club. The play will be by bogey score. The cup is designed after the famous Ardagh Cup, one of the finest examples of ancient Irish work, which is now in the Kildare Street Museum in Dublin. The original is composed of gold, silver, enamels, and jewels, and was, it is believed, meant for use as a chalice. The challenge cup will be of silver, about 9 in. high, with gilt panels and coloured enamel bosses; round it will be set stones representing the four Provinces of Ireland—the black pebble for Leinster, the white or Carn-money pebble for Ulster, the red stone for Munster, and the green Connemara marble for Connaught.

Cricket Match.—The North of Ireland Cricket Club, the premier club of Ulster, and one of the best in Ireland, has kindly offered to play a one-day match against a British Medical Association team. The beautifully turfed grounds of the club are only about five minutes' walk from Queen's College, where the Association will meet. The local executive will be very glad if some English cricketer will undertake to organize a team for the occasion; any one interested in the matter should communicate with one of the Honorary Local Secretaries.

Launch.—The local executive has some reason to hope that there may be an opportunity during the annual meeting of witnessing the launch of one of the great steamships for which the shipyards of the city of Belfast are famous. A large vessel for the Orient Line is at present on the stocks in Messrs. Workman, Clark, and Co.'s yard, and is expected to be launched in July. The exact date cannot be settled so far ahead, but if the firm can make it coincide with the visit of the Association to Belfast, it has courteously promised to do so.

Meetings of Branches & Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

DORSET AND WEST HANTS BRANCH:

BOURNEMOUTH DIVISION.

The annual general meeting of this Division was held on April 21st at the Medical Society's Rooms, Bournemouth, Dr. JOHNSON SMYTH in the chair.

Confirmation of Minutes.—The minutes of the previous meeting were confirmed.

Report and Financial Statement.—The report and financial statement for the past year by the Executive Committee were adopted.

Election of Officers.—The following officers were elected: *Chairman*, Eleanor C. Bond, M.D.; *Vice-Chairman*, Mr. F. C. A. Bushman; *Honorary Secretary*, E. Kaye Le Fleming, M.B.; *Representative*, W. Johnson Smyth, M.D.; *Executive Committee*, Eleanor C. Bond, M.D., Mr. F. C. A. Bushman, E. Kaye Le Fleming, M.B., Mr. C. H. W. Parkinson, F. W. Ramsay, M.D., W. V. Snow, M.D., W. Johnson Smyth, M.D., W. Alexander, M.D., F. Fowler, M.D., W. H. L. Marriner, M.B. (*Signifies Representative on Branch Council.)

Whole-time Medical Officers of Health.—On the proposition of Dr. MOORHEAD, seconded by Dr. MAHONEY, it was resolved:

That medical officers of health in boroughs or urban districts of 15,000 inhabitants and upwards be debarred from engaging in private practice.

Representation of Local Medical Profession on Boards of Hospitals and Similar Bodies (see SUPPLEMENT, BRITISH MEDICAL JOURNAL, April 10th, 1909, pp. 161, 162):

(a) By the Hampstead Division—

Approved.

(b) By the Wandsworth Division—

(i) Approved.

(ii) Not approved.

(c) Suggestion by the Hospitals Committee bearing on the same—

Approved.

Communication from Chelsea and Fulham Division.—A communication from the Chelsea and Fulham Division, referring to the Royal College of Surgeons of England, was ordered to lie on the table.

WEST DORSET DIVISION.

The annual meeting of this Division was held at the County Hospital, Dorchester, on Friday, April 16th. Eight members were present.

Election of Officers.—The following officers for the year were elected: *Chairman*, Mr. W. Rendall; *Vice-Chairman*, Mr. G. J. W. Flower; *Honorary Secretary*, Mr. T. MacCarthy; *Representatives on Branch Council*, Messrs. Curme, Flower, Macdonald, Rendall, and Whittingdale; *Executive Committee*, the above, with Messrs. Cosens, Marsh, Morrice, Hawkins, and Good; *Representative of the Division*, Surgeon-Lieutenant-Colonel D. Curme.

Medical Certificates of Suitability for Hospital Treatment.—The question, referred to the Division, that a medical certificate of suitability for hospital treatment be required as a condition of hospital treatment except in case of casualties, was affirmed unanimously.

Contributions to Hospitals by Employers and Employers.—It was unanimously decided that the affirmation of the principle expressed in this was not advisable.

Fresh Medical Institutions.—The question that no fresh public medical institution should be opened without previous consultation with the local medical profession was discussed, and was unanimously decided in the affirmative.

Sanatoriums for Workers suffering from Tuberculosis.—This question was not discussed, as there are none such in the area of the Division.

Whole-time Medical Officers of Health.—On the question that medical officers of health should be debarred from private practice, the decision was unanimously in the affirmative.

Midwives Act.—On the paper "Departmental Committee re Midwives Act," paragraph 5, the following conclusions were arrived at:

5. (a) Yes.

(b) No.

(c) No result.

(d) No.

6. No knowledge of such in this Division.

Report of Representative Meeting.—Surgeon-Lieutenant-Colonel CURME read his report of the proceedings of the Representative Meeting at Sheffield. A vote of thanks was accorded him for his services.

Communication from Chelsea and Fulham Division.—A communication from the Chelsea and Fulham Division, forwarding a resolution passed at their meeting on January 12th, 1909, concerning the action of the Council of the Royal College of Surgeons about the admission of women, was laid on the table.

METROPOLITAN COUNTIES BRANCH:

CHELSEA DIVISION.

A MEETING of the Division was held at the Fallam Town Hall on April 6th, Dr. PARSONS in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Proposed Putney Hospital.—A letter was read from Dr. Fothergill, Secretary of the South-West London Hospital Medical Committee, containing a proposal of that committee that all the practitioners in the district should be summoned to a meeting, at which certain resolutions should be submitted. The CHAIRMAN moved approval thereof. This was seconded and carried *nem. con.*

Election of Representative for Representative Meeting.—The CHAIRMAN moved, and Dr. BOYD seconded, the election of Dr. O'Sullivan, with power to appoint a deputy.

Proposed Federated Societies' Medical Benefit Association.—A letter thereon was read from the Medico-Political Committee, and, after some discussion, the CHAIRMAN moved and Dr. HAMILTON seconded:

That the proposal meets with our disapproval.

Carried *nem. con.*

Annual Dinner.—A Dinner Committee was appointed, consisting of Drs. Bedford, Boyd, and Gardner.

Alteration of Rules.—Dr. YOUNG moved the following resolution:

That the rules of the Division be so altered that in future eight Divisional meetings be held during the year, instead of four as heretofore, and as follows—the annual meeting on the first Tuesday in July, one on the first Tuesday in each month from October to March inclusive, and the last on the occasion of the annual dinner in April.

This was seconded and carried unanimously. as was also a proposal that a card be printed and circulated for the session.

An Ethical Matter.—A card issued by a practitioner in Chelsea advertising professional advice gratis was shown, and the Secretary was instructed to write for an explanation.

Vote of Sympathy.—A vote of sympathy was directed to be sent to Dr. Ramsden, a member of the Executive Committee, trusting that he would soon recover from his illness.

Contract Practice.—A special meeting was held subsequently to discuss the question of Contract Practice, to which all practitioners in the district were invited. The SECRETARY reported that to 226 circulars on the subject of contract practice sent to medical practitioners in the area of the Division, 88 replies only had been received; 40 stated that they had no contract practice, and were not sufficiently interested in the subject to attend a meeting to discuss it; 20 had no contract work, but would endeavour to attend such a meeting; 19 did contract work, and they also would endeavour to attend a special meeting. Of these 19, 8 were satisfied with their remuneration, 8 were dissatisfied, and 1 expressed no opinion thereon; 9 gentlemen gave no definite answer to the questions contained in the circular. In the absence of Mr. Smith Whitaker, Medical Secretary of the Association, his Deputy, Dr. Cox, addressed the meeting. He paid a tribute to the practical knowledge of the subject possessed by Mr. Smith Whitaker, and to his lucidity of expression thereupon. He said that the Association had a distinct policy on this question, and took a prominent part in an inquiry into the working of contract practice held in 1905. The ground was laid down and the fruits were seen perhaps better in the provinces than in London. The organization of the British Medical Association had helped groups of practitioners striving for better terms of contract, and in this connexion he quoted Gateshead. Some Divisions had done a great deal to settle the question for themselves, and as contract practice could not be dispensed with had organized a "public medical service" entirely under their own control. He quoted Norwich as a place with an excellent public medical service, which had absorbed a considerable proportion of all the contract work of the city. He concluded by urging this Division to proceed on the same lines. Questions were asked by Drs. YOUNG, MILLAR, and the SECRETARY. The CHAIRMAN moved, and the SECRETARY seconded, the appointment of a committee consisting of Drs. Young, Williams, and Hamilton, to consider and report upon the practicability of establishing a public medical service in this locality. Carried *nem. con.*

Vote of Thanks.—A vote of thanks was passed to Dr. Cox for attending.

First Annual Dinner.—Members are reminded that the first annual dinner of the Division will be held at the Trocadero Restaurant on Wednesday next, May 5th. Particulars on circulars issued.

HAMPSTEAD DIVISION.

An adjourned meeting of the local profession was held on Tuesday, March 30th. Dr. OPPENHEIMER took the chair.

Proposed Medical Service.—The object of the meeting was to consider proposals for the establishment of a public medical service in Hampstead, in order to provide for uniformity in contract practice, and for the treatment of needy school children under the new Medical Inspection Act. Mr. CUNNINGTON moved:

That it is desirable that a public medical service be formed in Hampstead and neighbourhood for the organization and provision of medical attendance for persons unable to pay the ordinary medical charges in the usual manner.

He pointed out that much work which in the past fell to the lot of the general practitioner was already taken from him. Legislation tended to go further in the same direction, and the ultimate result must be impairment of his efficiency. Dr. FORD ANDERSON, in seconding, said that much of the trouble in the management of hospitals, dispensaries, and sick clubs arose through the lay element. The low fees paid in many sick clubs were sweating the doctor, and the profession should insist on a wage limit in contract practice. He thought that the postponement by the London County Council of the proposal to establish school

clinics showed that now was the psychological moment in which to establish a public medical service. The motion was carried unanimously. The following resolution was also carried:

That this meeting appoint an organizing committee to draw up rules for the proposed service, to recommend names for its officers and committee, and to secure the adhesion of the medical practitioners in Hampstead and the neighbourhood to the service.

It was proposed by Dr. MACEVOY, who expressed the hope that the service would promote the interests of all those engaged in practice among the wage-earners. Drs. FORD ANDERSON, ARCHER, BARNETT, Mr. CUNNINGTON, Drs. P. EVANS, WINSLOW HALL, MACEVOY, PICARD, PINCOCK, and Mr. A. R. ROCHE were appointed as an organizing committee, and the resolution—

That it be a fundamental provision of the public medical service that any duly registered medical practitioner having been resident in Hampstead or neighbourhood for a year may become a member of the service on undertaking to abide by its rules.

was referred to it for consideration.

NORTH OF ENGLAND BRANCH:

DURHAM COMMITTEE.

The twentieth meeting of this Committee was held at the North-Eastern Hotel, Darlington, on Wednesday, March 24th; Dr. J. F. ARMSTRONG (South Shields) in the chair. The following were present: Drs. JACQUES (Washington), MORISON (Sunderland), DAVIS (West Hartlepool), CAMERON (Stockton), HERN (Darlington), and FARQUHARSON (Bishop Auckland); and Mr. A. T. SHEPHERD, Secretary. The following members of the Darlington Division also attended the meeting: Drs. RAINE, CARMICHAEL, HAIG, PEARSON, GRAY, and SMALES.

Election of Chairman.—Dr. J. F. ARMSTRONG was elected to the chair.

Confirmation of Minutes.—The minutes of the previous meeting, held on October 9th, 1908, were read and confirmed.

Apologies for Non-attendance.—Letters regretting inability to attend, received from Drs. JEPSON, HUBBERTY, and ARTHUR, were read.

Election of Chairman of Committee.—It was resolved, on the motion of Dr. ARMSTRONG, seconded by Dr. JACQUES, that Dr. JEPSON be re-elected Chairman of the Committee for the year 1909.

Election of Secretaries.—It was resolved, on the motion of Dr. MORISON, seconded by Dr. DAVIS, that Messrs. Graham, Shepherd, and Sons (Solicitors, Sunderland) be re-elected Secretaries of the Committee at the same salary as heretofore.

Secretaries' Report.—The SECRETARIES read their report for the past year, which showed that the matters dealt with had had reference to the Notification of Births Act; medical certificates for school children; fees for examination and reports in compensation cases; covering; medical inspection of schools; miners and colliery doctor; compensation cases; the Ethical Committee and rules; and unqualified practice.

Darlington Division and Friendly Societies' Medical Association.—The Committee then proceeded to confer with the members of the Darlington Division, in reference to a communication from that Division made to the Branch Council concerning certain resolutions passed by the Division in 1902 in reference to the Friendly Societies' Medical Aid Association in that town, and which resolutions it was believed were not being adhered to by one or two members of the Division, and which communication the Branch Council had referred to the Committee for investigation and report. Dr. HAIG (the Secretary of the Division) explained the position of matters, and said that what the Division desired was that the Branch Council should issue some general and impersonal warning to the practitioners in the Darlington district, and especially that the consultants of the district should be officially notified that the resolutions were still in force. It was ultimately resolved, on the motion of Dr. DAVIS seconded by Dr. MORISON, that the secretaries of the Committee should report to the Branch Council the views of the Division as expressed at their meeting, and point out their desire that the Branch Council should find some way of making it known to the consultants that the resolutions were still in force, and had recently been reaffirmed.

Warning in "British Medical Journal."—Several members of the Division suggested that special notice might be drawn to the warning in the *BRITISH MEDICAL JOURNAL*, so that the matter might attract the notice of young practitioners, who might be invited to become assistants to medical aid associations.

Meetings of Committee.—On the suggestion of the SECRETARIES it was decided that the meetings of the Committee might from time to time be held in different towns, and it was left to the chairman and the secretaries to fix upon the place.

SOUTH MIDLAND BRANCH: NORTHAMPTONSHIRE DIVISION.

On April 20th a meeting of the Division was held in the Board Room of the Northants General Hospital after a luncheon at Franklin's Restaurant. Mr. C. J. EVANS was in the chair. There were present Drs. Harries-Jones, Darley, Bull, Moore, Milligan, Grindon, Linnell, Robson, Baxter, Hichens, and Stone. Drs. Larking and Loyd Evans attended as visitors.

Confirmation of Minutes.—The minutes were read and confirmed.

Report of Executive Committee.—The report of the Executive Committee was then considered. Model by-laws were passed and the Bradford Ethical Rules were adopted *en bloc*.

Alteration of Boundaries.—The Division assented to the proposed alteration in its boundaries.

Medical Certificates of Suitability of Patients for Hospital Treatment.—This question was discussed and it was proposed by Dr. MILLIGAN, seconded by Dr. LINNELL:

That a medical certificate of suitability for hospital treatment be required as a condition of hospital treatment except in the case of a casualty.

Ayes 4, Noes 3.

Contributions to Hospitals by Employers of Labour and Employes.—In regard to this matter, the following resolution was proposed by Dr. ROBSON, seconded by Dr. DARLEY:

That all contributions made by working men to hospitals and other similar institutions should be regarded as pure charity and not as a business matter.

Passed unanimously.

Fresh Public Medical Institutions.—After discussion of this question, the following resolution was proposed by Dr. LINNELL, seconded by Dr. BULL:

That it is desirable that no fresh public medical institution should be opened without previous consultation with the local medical profession through some organized medical body, such as the Division of the British Medical Association in the area of which it is proposed to establish such new institution; and that it be an instruction to the Council to give effect to this principle in considering applications from Divisions or Branches for support in dealing with hospital questions.

Carried.

Sanatoriums for Workers Suffering from Tuberculosis.—In regard to this matter, it was proposed by Dr. HICHENS, seconded by Dr. BAXTER:

That the report lie on the table, and that no action be taken by the Division.

Departmental Committee re Midwives Act.—Members in a position to know stated that no action had been taken by the guardians.

Whole-time Medical Officers of Health.—After discussion of this question, the following resolution was proposed by Dr. DARLEY and seconded by Dr. HICHENS:

The Division is of opinion that medical officers of health for counties and large towns should be whole-time officers, but that in rural districts they should be allowed to engage in general practice, and that security of tenure should be assured.

This motion was lost: Ayes 3, Noes 4. Dr. BULL proposed, and Dr. STONE seconded:

That medical officers of health should be debarred from engaging in private practice.

Ayes 5, Noes 2. They further proposed:

That medical officers of health, after resigning their appointment in a district, should be debarred from engaging in private practice in that district for the space of one year.

Ayes 3, Noes 1.

Representation of Local Medical Profession on Hospital Boards of Management.—On the motion of Dr. LINNELL, seconded by Dr. DARLEY, the Representative of the Division, Dr. Baxter, was instructed to vote in favour of such representation.

Cases.—Mr. C. J. EVANS then showed a cretin and a case of exophthalmic goitre, and Dr. ROBSON showed some cases in the wards.

To ensure the insertion of notices in this column, they must be received at the Central Offices of the Association not later than the first post on Tuesday.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

ABERDEEN BRANCH.—*Election of Representative of the Branch on the Council of the Association.*—Nominations of candidates must be sent in writing on or before May 22nd to Dr. J. F. Christie, 7, Afford Place, Aberdeen.

BATH AND BRISTOL BRANCH.—*Election of Representatives of the Branch upon the Central Council.*—Nominations of candidates for election to the Central Council must be forwarded to the Honorary Secretaries not later than May 8th. The Branch is entitled to elect one member. **NEWMAN NIELD**, Richmond Hill, Clifton; **W. M. BEAUMONT**, 4, Gay Street, Bath.

BIRMINGHAM BRANCH.—*Election of Representatives of the Branch on the Council of the Association.*—Nominations of candidates must be sent in writing on or before May 19th next to **Albert Lucas, F.R.C.S.**, Branch Secretary, 9, Easy Row, Birmingham. The Branch is entitled to elect two members.—**ALBERT LUCAS**, Honorary Secretary.

DORSET AND WEST HANTS BRANCH.—The spring meeting of this Branch will be held in the Dorset County Hospital, Dorchester, on Wednesday, May 5th, 1909, at 3 p.m. The President, **J. A. Hosker, Esq., J.P.**, will be in the chair. Agenda: (1) The minutes of last meeting. (2) The minutes of the special meeting held on March 2nd. (3) Letters and apologies for non-attendance. (4) The President will vacate the chair and introduce his successor, **Charles J. Marsh, Esq., L.R.C.P. Edin., M.R.C.S. Eng.**, etc. (5) The Honorary Treasurer will present his financial statement for 1908. (6) Reports from the Divisions for 1908. (7) Report of the Council for 1908. (8) Report of the return of a Representative of the combined Dorset and West Hants and West Somerset Branches on the Central Council of the Association. (9) The date and place for the summer meeting. (10) The President will deliver his presidential address. (11) Dr. A. Humphrey-Davy will read notes on a case of chronic gastric catarrh. (12) Dr. Ramsey will relate three cases of myomectomy during pregnancy. (13) Dr. Ramsey will exhibit the following specimen: *Post-partum septic thrombosis in broad ligament.* (14) The members of the honorary medical staff of the Dorset County Hospital will show cases and pathological specimens. An official luncheon will be provided at the King's Arms Hotel, Dorchester, at and from 1.30 p.m., price 2s. 6d. per head, exclusive of wines, etc. The Vice-President and Mrs. Burroughs Cosens will be pleased to see members and friends to tea at the Gables, at 5.15 p.m. Members who intend to be present are requested to sign the post-card enclosed with notice of meeting and return it to **William Burroughs Cosens, Esq.**, so that it may reach him not later than Monday, May 3rd, 1909.—**JAMES DAVISON**, Honorary Secretary, "Streteplace," Bournemouth.

DUNDEE BRANCH.—The annual meeting of the Branch will be held in the Royal Infirmary, Dundee, on Friday, May 7th, at 3.15 p.m. A clinical meeting will be held at 4 o'clock, and dinner will be served in the Queen's Hotel at 6 o'clock. Members and visitors intending to be present are requested to notify the secretaries, **R. C. BUIST** and **A. P. LOW**.

DUNDEE, PERTH, AND STERLING BRANCHES.—*Election of Representative Member of Central Council.*—Nominations, in accordance with the regulations of the Association, must be sent to me on or before Saturday, May 22nd.—**R. C. BUIST**, M.D., 166, Nethergate, Dundee, Returning Officer.

GLASGOW AND WEST OF SCOTLAND BRANCH.—*Election of Members of the Central Council.*—In accordance with Association By-law 25, Branch Rule 5, nominations for Representatives on the Central Council, each signed by at least three electors, are requested to be sent to me on or before Wednesday, May 26th. The Branch is entitled to return two Representatives. The present Representatives, Mr. James Grant Andrew and Dr. D. J. Mackintosh, M.V.O., are eligible, and seek re-election.—WM. D. MACFARLANE, Jun., 17, Woodside Crescent, Honorary Secretary.

LANCASHIRE AND CHESHIRE BRANCH.—*Election of Representatives of the Branch on the Council of the Association.*—Nominations of candidates must be sent in writing on or before May 8th next to F. CHARLES LARKIN, Branch Secretary, 54, Rodney Street, Liverpool.

LANCASHIRE AND CHESHIRE BRANCH.—A general meeting of the Branch will be held on Wednesday, May 12th, at the New Manchester Royal Infirmary (by kind invitation of the Committee and Medical Board). Details will be published later.—F. CHARLES LARKIN, Branch Secretary.

LANCASHIRE AND CHESHIRE BRANCH: WARRINGTON DIVISION.—The annual meeting of this Division will be held at the Infirmary, Warrington, on Tuesday, May 11th, at 4.30 p.m.—T. A. MURRAY, Honorary Secretary.

METROPOLITAN COUNTIES BRANCH.—*Nominations of Branch Officers.*—Pursuant to By-law 25, notice is hereby given that nominations for all the officers of the Branch—namely, President-elect, Vice-Presidents, Secretary, members of the Branch on the Central Council of the Association—must be sent in to the Honorary Secretary of the Branch on or before May 29th. Voting papers will be sent out on or before June 5th, and must be returned to the Secretary on or before June 12th.—ATWOOD THORNE, E. W. GOODALL, Honorary Secretaries.

METROPOLITAN COUNTIES BRANCH: LAMBETH DIVISION.—The next meeting of the Lambeth Division will be the annual general meeting, and it will be held on May 6th, at 4 p.m., in Bethlem Hospital. Agenda:—(1) Minutes of the previous meeting. (2) A motion referred to the Divisions from the Hospitals Committee, re contributions to hospitals by employers of labour and employees (see SUPPLEMENT, February 27th, 1909, p. 102). (3) *Re* sanatoriums for workers suffering from tuberculosis. The following motion is referred to the Divisions from the Annual Representative Meeting at Sheffield: "That, in the opinion of the Representative Meeting, it is not advisable that members of the Association should in future accept, or continue to hold, appointments as Honorary Local Medical Referees to the National Association for the Establishment and Maintenance of the Sanatoriums for Workers Suffering from Tuberculosis, and that the Divisions be requested to consider the matter as affecting any of their own members, or other practitioners in their respective areas, who may hold such appointments." (4) To consider the following communication from the Chelsea and Fulham Division: "That we, the Chelsea and Fulham Division of the Metropolitan Counties Branch of the British Medical Association, deeply regret and resent the action of the Council of the Royal College of Surgeons of England, in that having ascertained the wishes of a majority of the Fellows and Members of their College, that they should deliberately flout that opinion in the recent alteration of their By-laws, and that a copy of this resolution should be sent to the other Divisions of the British Medical Association." (5) Election of officers for the ensuing session. The following names are suggested by the Executive Committee: *Chairman*, W. H. B. Stoddart, M.D.; *Vice-Chairman*, J. V. C. Deakin, L.R.C.P.; *Honorary Secretary*, "Herbert French, M.D., F.R.C.P.; *Representative of Representative Meetings*, "R. Esler, M.D.; *Representative upon the Branch Council*, R. Capes, Esq., M.R.C.S., L.R.C.P., and Honorary Secretary of the Division *ex officio*; *Executive Committee*, "E. A. Edleston, M.B., M.R.C.S., "W. E. Sturges-Jones, M.R.C.S., L.R.C.P., "H. J. Spott, M.R.C.S., L.R.C.P., G. F. Grant, M.B., T. H. P. Peers, L.M.S.S.A., V. A. Jaynes, M.R.C.S., L.R.C.P., W. A. Atkinson, M.D. "Those marked with an asterisk held this office last year." Members of the Division desirous of nominating other candidates for any of the above offices are requested to send the names of their nominees, duly seconded, together with a note to indicate the willingness of the nominee to accept the office if elected, to the Honorary Secretary of the Division, at 26, St. Thomas Street, S.E. (6) Dr. Hyslop will give clinical demonstrations upon cases from the wards of the Bethlem Royal Hospital. (7) Other business, if necessary.—HERBERT FRENCH, Honorary Secretary, Lambeth Division, 26, St. Thomas Street, S.E.

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS AND LONDON DIVISION.—This Division will hold a meeting at the Midland Grand Hotel, King's Cross, on Tuesday, May 4th, at 9 p.m. Dr. Lauriston Shaw, Physician to Guy's Hospital, will open a discussion on Some Points in the Diagnosis of Gastric Disease.—W. GILFILLIE, Honorary Secretary.

METROPOLITAN COUNTIES BRANCH: WESTMINSTER DIVISION.—The next meeting of the Division will be held on Thursday, May 6th, at the Criterion Restaurant, at 7.30, when the members will dine together. Dinner tickets, 5s.; any member of the profession will be welcome. Agenda: 8.30 p.m., ordinary Association business. At 9 p.m. Sir William Gowers, M.D., F.R.C.P., will read a paper on The Varieties of Premonitory Symptoms of Migraine, which will be open to discussion.—HARVEY HILLIARD, 30, Wilton Place, S.W., J. HOWELL EVANS, Esq., 25, Berkeley Square, W., Honorary Secretaries.

MIDLAND BRANCH.—The annual meeting of this Branch will be held at the Leicester Infirmary on Thursday, June 10th. (1) The President-elect, Dr. R. Pratt, will give an address. (2) Election of Branch officers. (3) Annual report of the Branch. (4) Any other business. In accordance with the by-laws, notice is hereby given that nominations for the election of two Representatives of this Branch on the Central Council must be sent to the Honorary Secretary of the Branch not later than May 24th.—ROBERT SEVESTRE, Honorary Secretary, London Road, Leicester.

SOUTH-EASTERN BRANCH.—The annual meeting of this Branch will be held at Croydon on Wednesday, June 23rd, Dr. J. J. Macan, President-elect, in the chair. The following will be the agenda:—(1) To elect the officers of the Branch; nominations by three members for the offices of President-elect, Vice-Presidents, and Secretary, may be sent to the Honorary Secretary on or before May 21st. (2) To receive the annual report of the Branch. (3) To transact any business that may be transacted by an ordinary meeting. Three members to represent the Branch on the Central Council will also be elected by voting papers. Nominations for these posts, each by three members in meeting, should be sent to the Honorary Secretary on or before May 21st.—H. M. STEWART, Honorary Secretary, Dulwich.

SOUTH-EASTERN OF IRELAND BRANCH.—The annual meeting of this Branch, as also a meeting of the Branch Council and the local Division, will be held at the Victoria Hotel, Kilkenny, on Wednesday, May 5th, at 5.15 p.m. Agenda:—(1) Minutes of last meeting. (2) Letters of apology. (3) Correspondence. (4) Installation of President-elect. (5) Election of officers of the Branch for the ensuing year. (6) Dr. Laffan's motion deferred. Any other business. Dinner.—J. QUIRKE, Honorary Secretary, Piltown.

SOUTH MIDLAND BRANCH.—In accordance with By-law 25, notice is hereby given that nominations for the election of a Representative of this Branch on the Central Council must be sent to me not later than May 22nd next.—E. HARRIES-JONES, 16, Castilian Street, Northampton.

SOUTH MIDLAND BRANCH: BEDFORD AND HERTS DIVISION.—A meeting of the Division will be held on Thursday, May 6th, at 3 p.m., at the County Hospital, Bedford. Business: Matters referred to Divisions: (1) Report on medical certificates of suitability of patients for hospital treatment. (2) Report on contributions to hospitals by employers of labour and employees. (3) Statement as to fresh public medical institutions. (4) Statement as to sanatoriums for workers suffering from tuberculosis (see SUPPLEMENT, February 27th). (5) Departmental Committee *re* Midwives Act.—E. H. COBB, Honorary Secretary, Belmont, Stevenage.

SOUTH MIDLAND BRANCH: NORTHANTS DIVISION.—A clinical meeting of the Division will be held in the out-patient rooms of the Northampton General Hospital on Tuesday, May 4th, at 2.30. It is hoped that members having interesting cases they wish to show will bring them. There will be a luncheon at Franklin's Restaurant at 1.30: anybody wishing to attend should notify the Secretary two days beforehand.—FEVERELL S. HICHENS, Honorary Secretary.

STAFFORDSHIRE AND SHROPSHIRE AND MID-WALES BRANCHES.—Nominations for the office of Representative on the Central Council of the Association should be sent to the undersigned on or before Saturday, May 15th, in accordance with By-law 25.—G. PETGRAW JOHNSON, Honorary Secretary, Staffordshire Branch, Brook Street, Stoke-on-Trent. C. G. STAFF-WOOD, Honorary Secretary, Shropshire and Mid-Wales Branch, Shrewsbury.

ULSTER BRANCH.—The spring meeting of this Branch will be held in Londonderry on Saturday, May 8th.—CECIL SHAW, Honorary Secretary, 29, University Square, Belfast.

BRANCH.

WORCESTERSHIRE AND HEREFORDSHIRE

YORK HIRE

The expediency of establishing a Branch Ethical Committee was under consideration at the Worcester and Hereford meeting of the Council. The Council decided to appoint a sub-committee to inquire into the office of health and medical inspector to the county schools was discussed, and in view of the action taken by the local authority it was decided to consider the question of the appointment of a medical officer to the county schools. The sub-committee has since then been working on the matter, and has already held several meetings. The members of the committee have been elected by a large majority of the Council, in consequence of the terms subsequently insisted on. The meetings have been fairly well attended. At all meetings demonstrations and papers have been presented, and the Council has been able to discuss the friendly social intercourse is to be observed among members of the Branch.

There has been a net increase of 50 members. One meeting of the Council was called in November to consider the desirability of taking action with regard to the question of the appointment of a medical officer to the county schools. The Council decided to appoint a sub-committee to inquire into the office of health and medical inspector to the county schools was discussed, and in view of the action taken by the local authority it was decided to consider the question of the appointment of a medical officer to the county schools. The Council decided to appoint a sub-committee to inquire into the office of health and medical inspector to the county schools was discussed, and in view of the action taken by the local authority it was decided to consider the question of the appointment of a medical officer to the county schools. The sub-committee has since then been working on the matter, and has already held several meetings. The members of the committee have been elected by a large majority of the Council, in consequence of the terms subsequently insisted on. The meetings have been fairly well attended. At all meetings demonstrations and papers have been presented, and the Council has been able to discuss the friendly social intercourse is to be observed among members of the Branch.

There has been a net increase of 50 members. One meeting of the Council was called in November to consider the desirability of taking action with regard to the question of the appointment of a medical officer to the county schools. The Council decided to appoint a sub-committee to inquire into the office of health and medical inspector to the county schools was discussed, and in view of the action taken by the local authority it was decided to consider the question of the appointment of a medical officer to the county schools. The sub-committee has since then been working on the matter, and has already held several meetings. The members of the committee have been elected by a large majority of the Council, in consequence of the terms subsequently insisted on. The meetings have been fairly well attended. At all meetings demonstrations and papers have been presented, and the Council has been able to discuss the friendly social intercourse is to be observed among members of the Branch.

REPORTS ON MATTERS OF BRANCH ORGANIZATION, AND
OTHER QUESTIONS OF LOCAL INTEREST (1908).

BRANCH.	MEMBERSHIP.		FINANCIAL STATEMENT.						MEETINGS.				Branch Council.	
	On December 31st, 1907.	On December 31st, 1908.	Balance from 1907.	Deficit (if any) from 1907.	Receipts for 1908.	Expenditure, 1908.	Balance to 1909.	Deficit (if any) to 1909.	Branch.	Scientific.	Medico-Political, Ethical, etc.	Occasions when Members met together.	Average attendance.	
BURMAH	48	50	£ s. d. 48 13 4	£ s. d. —	£ s. d. 78 12 2½	£ s. d. 70 5 9	£ s. d. 56 19 9½	£ s. d. —	12	10	3	—	17	1
At one meeting the question as to the propriety of forming a "Black List" of delinquent patients was discussed. The Branch Council also met to decide on a certain ethical question raised by a member. The Branch, accordingly, unanimously decided to hold monthly meetings at which papers are read and cases shown. A great deal of interest has been taken in certain matters of an ethical nature.														
CAPE OF GOOD HOPE (EASTERN PROVINCE)	73	58	2 1 10	—	32 15 5	22 16 1	11 19 2	—	5	4	3	—	5.4	1
Medico-political points pressed at Parliamentary elections. Reciprocity as regards foreign medicine. The Branch has been asked to send a delegate to the Resident to be evidence of registration in Court of Law. Amendment of Medical and Pharmacy Act. Formulae to be printed on labels of patent medicines. Inter-State (Colonial) medical and pharmaceutical matters. The Branch has been asked to send a delegate to the Medical Council and heads of colleges on tuberculosis in cattle and the tuberculin test. Seven Rhodes College professors present at a practical discussion on the treatment of cancer. Rhodes College has been asked to send a delegate to the matters of medical curriculum. The Branch has been asked to act as advisers in College, who have given a room rent free.														
CAPE OF GOOD HOPE (WESTERN PROVINCE)	114	137	—	—	—	—	—	—	13	8	5	1	25	14
(a) Question of amendment of Medical Acts. (b) Question of formation of a South African Committee. (c) Question of admission of paying patients to local hospitals. (d) Question of the formation of a branch of the Branch until meeting in March, 1909.														
COLOMBO, CEYLON	151	151	20 5 6	—	180 4 0	170 0 7	50 8 11	—	8	—	—	—	12	2
GIBRALTAR	24	19	8 5 8	—	4 16 0	3 7 3	9 14 5	—	4	3	1	1	13	7
The Branch approached the Government with reference to move some resolutions regarding the medical profession. They have received an assurance that it is not the intention of the Government to grant any more licences to foreigners to reside and practise here. One meeting was, at the request of the medical officers, devoted to the consideration of the results of the discussion were placed at the service of the medical officer of health, and it is hoped that the sanitary authorities will move in the matter of making some arrangements for the education of the medical profession. It is hoped that the practitioners were granted certificates of successful vaccination without personally examining the cases, and the matter was brought to the notice of all practitioners by a circular letter. The matter has been discussed at a meeting of the Branch. The Gibraltar has suffered to a great extent from the general depression in trade, and practitioners have felt some of the effects.

British Medical Association.

GRANTS AND SCHOLARSHIPS FOR SCIENTIFIC RESEARCH.

GRANTS.

THE Council of the British Medical Association is prepared to receive applications from members of the Medical Profession for Grants in aid of Researches for the Advancement of Medicine and the Allied Sciences.

The Grants are made subject to the following conditions:

1. That the work of the Grantee shall be subject to inspection by the Science Committee of the Association.

2. That each Grantee shall furnish to the Science Committee, on or before May 15th following the allotment of the grant, a report (or, if the object of the grant be not then attained, an interim report, to be renewed not later than the same date in each subsequent year until the final report is presented) containing:

(a) A statement, in a form satisfactory to the Science Committee, of the results arrived at, or the stage which the inquiry has reached;

(b) A statement of expenditure incurred, accompanied by vouchers as far as possible;

(c) A reference to any Transactions, Journals, or other publications in which the results of the research have been announced.

SCHOLARSHIPS.

The Council of the British Medical Association is also prepared to receive applications for Research Scholarships, as follows:

1. An ERNEST HART MEMORIAL SCHOLARSHIP, of the value of £200 per annum, for the study of some subject in the department of State Medicine.

2. THREE RESEARCH SCHOLARSHIPS, each of the value of £150 per annum, for research in Anatomy, Physiology, Pathology, Bacteriology, State Medicine, Clinical Medicine, or Clinical Surgery.

Each Scholarship is tenable for one year, but is renewable by the Council, provided that the whole period of tenure shall not exceed three years.

The Scholarships are awarded subject to the following conditions:

1. That the work of the Scholar shall be subject to inspection by the Science Committee of the Association.

2. That he shall furnish the Science Committee, on or before May 15th following the grant of the Scholarship, with a statement of the work done by him.

3. That he sign an undertaking to abide by the above and other regulations affecting Scholarships, a copy of which will be supplied to him.

Applications.

Applications for Grants and Scholarships for the year 1909-10 must be made, not later than May 27th, 1909, in the prescribed form, a copy of which will be supplied on application to the Medical Secretary, 429, Strand, London, W.C.

Each application should be accompanied by a recommendation from the head of the laboratory in which the applicant proposes to work, setting out the fitness of the candidate to conduct such work and the probable value of the work to be undertaken. This is not intended, however, to prevent applications for Grants in aid of work which need not be performed in a recognized laboratory.

J. SMITH WHITAKER, Medical Secretary.

429, Strand, W.C., March, 1909.

CENTRAL MIDWIVES BOARD.

A MEETING of the Central Midwives Board was held at Caxton House, Westminster, on April 22nd, with Dr. F. H. CHAMPEYNS in the chair.

New Member.

A letter was received from the Secretary of the Royal College of Surgeons reporting that Mr. C. H. Golding-Bird, F.R.C.S., had been elected to represent the College on the Board in place of Mr. J. Ward Cousins, F.R.C.S., retired.

Practitioners "Covering" Midwives.

Letters were further considered from Dr. A. G. R. Foulerton, County Medical Officer for East Sussex, as to medical practitioners "covering" midwives, and it was decided that subject to Dr. Foulerton's consent, the Board forward the letters (with or without revision by Dr. Foulerton) to the Privy Council, with the object of obtaining an opinion as to whether a certified midwife personally delivering a woman in childbirth is acting as a midwife when a medical practitioner has been engaged to attend the case.

Supervision of Midwives.

Letters were considered from the Medical Secretary of the British Medical Association as to the supervision of midwives approved for the purpose of undertaking the practical training of pupils. With reference to the first communication received, the Board approved its Secretary's reply explaining the duties of the local supervising authorities in the matter. Concerning the second letter from the Medical Secretary asking for further details, after a discussion in which Sir W. J. Sinclair spoke on the subject of evasion of the rules by institutions, the Board decided that the Secretary should reply that the Board would be glad to be put in possession of any specific information as to the evasion of the rules.

Refusal of Doctors to Attend on Summons of Midwife.

A letter from Dr. Thresh, County Medical Officer for Essex, as to the refusal of medical practitioners in a country district of Essex to attend when summoned on the advice of a midwife was considered. The Board decided that Dr. Thresh be asked to furnish particulars.

The Finances of the Board.

The following motions in the name of Sir George Fordham were on the agenda, but were postponed in the absence of the mover:

That the Privy Council be asked to obtain from the Treasury an advance of a sum sufficient to meet the current expenditure of the Board, after deduction of ordinary receipts until the proceeds of an apportionment between the councils of the several counties and county boroughs of England and Wales are available.

That the attention of the Privy Council be called to the fact that by the end of June next the Board will be without funds to discharge the duties imposed on it by statute, and be asked to advise as to the course to be pursued by the Board under these circumstances.

Dr. Champneys was re-elected Chairman and Sir G. Fordham Honorary Treasurer.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

THE following appointments have been made at the Admiralty:—Staff Surgeon E. T. BERTON to the *Emmett*, additional, for Malta Dockyard, May 2nd; Staff Surgeon W. K. HOPKINS to the *Talbot*, on recommissioning, May 4th; Surgeon L. M. MORRIS to the *Blenheim*, temporarily, April 19th; Surgeon J. S. ARDEN, M.B., to the *Fortie*, April 20th; Surgeon R. KENNEDY, M.B., to the *Victory*, undated; Staff Surgeon P. H. HANSSINGER, M.B., to the *Skeirminster*, on recommissioning, May 4th; Staff Surgeon F. E. DIXON to the *Seaford*, on recommissioning, May 4th; Fleet Surgeon H. B. MARRIOTT to the *Doris*, on recommissioning, May 4th; Surgeon A. S. BRADLEY, M.B., to the *Hussar*, additional, April 22nd; Fleet Surgeon R. H. J. BROWNE and Surgeon L. C. HUNT to the *Tombayre*, on commissioning, May 15th; Fleet Surgeon C. BRADLEY, M.D., to the *Cesareo*, on recommissioning, May 15th; Staff Surgeon H. HUNT to the *Medea*, on completing, April 27th.

INDIAN MEDICAL SERVICE.

LIEUTENANT-COLONEL R. JAMES, M.B., Madras, having reported his arrival on March 29th from Trivandrum, has taken over the duties of Principal Medical Officer, Kohat Brigade.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

THE following officers, who are serving in India, have been appointed Specialists in the subjects named:—Advances, Operative Surgery, Major F. E. GUYSTER, M.B., 8th (Lucknow) Division; Ophthalmology, Captain J. G. GILL, 1st (Peshawar) Division, and Captain H. M. NICHOLS, 6th (Poona) Division.

Lieutenant-Colonel T. P. WOOLNOUTH to be Brevet Colonel, under the provisions of Articles 35 and 307 of the Royal Warrant for Pay and Promotion, 1907, dated April 28th. He was appointed Surgeon, February 5th, 1881; Surgeon-Major, February 5th, 1895; and Lieutenant-Colonel, February 5th, 1901. He served in the South African war, 1899-1902, being present at the relief of Ladysmith, and in operations in Cape Colony, Orange River Colony, and the Transvaal; he was mentioned in despatches, and received the Queen's medal with three clasps and the King's medal with two clasps.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

For Attachment to Units other than Medical Units.—Cecil OSBORN, M.B., to be Lieutenant, March 23rd.

Third London General Hospital.—Surgeon-Lieutenant-Colonel and Honorary Surgeon-Colonel JON ADAMS, from the 21st Middlesex (The Finsbury) Volunteer Rifle Corps, to be Lieutenant-Colonel with the honorary rank of Surgeon-Colonel, with precedence as the Volunteer Force, April 1st, 1908. WILLIAM K. PEARCE, late Surgeon-Lieutenant, 1st Battalion Royal Fusiliers (City of London Regiment), to be Major, March 31st, 1909.

Second Western General Hospital.—Lieutenant-Colonel A. H. YORCE, M.B., F.R.C.S. Eng., resigns his commission, February 27th, 1909. Major WILLIAM T. TRENCH, M.D., F.R.C.S. Eng., to be Lieutenant-Colonel, February 28th, 1909. FREDERIC H. WESTMACOTT, F.R.C.S. Eng., to be Major, February 28th, 1909.

For Attachment to Units other than Medical Units.—The undermentioned officers, from the Westmorland and Cumberland Imperial Yeomanry, are appointed to the corps, with precedence as in the Imperial Yeomanry, dated April 1st, 1908.—Surgeon-Major JOSEPH EDWARD BOWSER, M.B., to be Major, Surgeon-Lieutenant JOHN LIVINGSTONE, M.B., to be Lieutenant, in the field after October 1st, 1909. The Royal Army Medical Corps (Militia), to be Lieutenant, with precedence as in the Militia, March 11th, 1909.

Unattached List.—Surgeon-Captain HENRY WATTE, from the Second (Duke of York's) West Riding's Royal Engineers (Volunteers), to be Surgeon-Major, February 4th, 1909.

ARMY MEDICAL SERVICE.

AN examination of candidates for not fewer than twenty commissions in the Royal Army Medical Corps will be held on July 26th next and following days. Applications to compete should be made to the Secretary, War Office, London, S.W., not later than July 19th, on which date the list will be closed. Candidates who are over the regulated limit of age at the date of the examination will be permitted to deduct from their actual age any period of service in the field after October 1st, 1909, that they could reckon towards retired pay and gratuity, if such deduction will bring them within the age limit. The presence of candidates will be required in London from July 26th.

Hospitals and Asylums.

THE CANTON CONVALESCENT HOME, LIMPSPFIELD. The fourteenth annual report of the Canton Convalescent Home, which caters for the printing and allied trades and has its habitation at Limpfield, shows that last year 154 patients were admitted, the average duration of their stay being 19.75 days. During this period they gained in weight an average of 5.75 lb., and with few exceptions showed other evidence also of having derived substantial benefit, shaking off the effects of more or less severe illness and returning to their occupation with renewed vigour. The committee is endeavouring to make arrangements for the admission of cases regarded as tuberculous to some sanatorium at the expense of the funds of the home. Its honorary medical officers, whose services are warmly acknowledged in the report, decline, it appears, to pass such cases for the home itself, and in this they are no doubt right. The home is mainly supported by those engaged in the printing trade, and is justly proud of this fact, but nevertheless it would be better that its financial statements should conform with the revised system of hospital accounts.

DEWSBURY INFIRMARY.

THE corner stone of a new nurses' home, which is being erected in connexion with the Dewsbury and District General Infirmary, was laid by Dr. Jane Walker in the presence of a distinguished company, including Mr. Walter Runciman, M.P., President of the Board of Education. The home is being erected in the north-east corner of the infirmary grounds. It will be a substantial stone building, two stories in height, and will contain a large sitting room, kitchen, and separate bedrooms for ten nurses. There will also be a bathroom, lavatory, and housemaid's room on each floor, store rooms and a room in the basement for heating apparatus. The estimated cost is about £2,000, and the building is expected to be ready for occupation in September next.

ILKLEY CORONATION COTTAGE HOSPITAL.

TWO new wings to this hospital were formally opened on January 30th. Each wing contains eight beds for male patients and female patients respectively. The Chairman of the Hospital Committee stated that since the hospital had been opened in April, 1905, 265 cases had been treated. The total cost of site, buildings, and equipment had been about £4,000, of which sum the portion recently erected represented £1,250.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

IN seventy-six of the largest English towns, including London, 9,203 births and 4,385 deaths were registered during the week ending Saturday last, April 24th. The annuity-rate of mortality in these towns, which had been 17.9, 17.0, and 17.1 per 1,000 in the three preceding weeks, declined last week to 15.8 per 1,000. The rates in the several towns ranged from 7.1 in Horsey, 7.5 in Reading, 7.7 in Ipswich, 8.5 in Willesden, 8.8 in Walsley, and 9.5 in Walthamstow, to 22.9 in Ruddesfield, 21.4 in Preston, 21.4 in Plymouth, 22.4 in Wigan, 24.3 in Middlesbrough, and 26.5 in Swansea. In London the rate of mortality was 15.0 per 1,000. The annuity-rate of mortality in the seventy-five other large towns. The death-rate from the principal infectious diseases averaged 1.6 per 1,000 in the seventy-six towns; in London also the death-rate from these diseases was equal to 1.6 per 1,000, while among the seventy-five

other large towns the rates ranged upwards to 3.4 in Plymouth, 3.5 in East Ham, 4.0 in Walthamstow, and 5.8 in Stockport, 5.7 in Swansea, 5.9 in Wigan, and 7.1 in St. Helens. Measles caused a death-rate of 0.21 in East Ham, 2.2 in Middlesbrough, 2.3 in Sunderland, 2.4 in Derby, 2.5 in Devonport and in Wolverhampton, 2.9 in Plymouth, 3.8 in St. Helens, and 4.0 in Wigan; diphtheria of 1.31 in West Ham, 1.4 in Walsley, 1.5 in Wigan, 1.2 in Wigan, 1.8 in Preston, 2.7 in St. Helens, and 3.2 in Swansea. The mortality from scarlet fever, from enteric fever, and from diarrhoea showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The number of scarlet fever patients under treatment in the Metropolitan Asylum Hospitals and the London Fever Hospital, which had been 2,462, 2,418, and 2,294 at the end of the three preceding weeks, had further declined to 2,219 at the end of last week; 265 new cases were admitted during the week, against 275, 256, and 244 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

DURING the week ending Saturday, April 24th, 1,050 births and 620 deaths were registered in eight of the principal Scottish towns. The annual rate of mortality in these towns, which had been 17.7 and 18.4 per 1,000 in the two preceding weeks, declined again to 17.4 per 1,000 last week, but was 1.6 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scottish towns the death-rates ranged from 14.1 in Leith and 14.1 in Aberdeen, to 18.5 in Edinburgh and 21.0 in Paisley. The death-rate from the principal infectious diseases averaged 2.4 per 1,000 in the eight Scottish towns, the highest rates being recorded in Aberdeen and Paisley. The 230 deaths registered in Glasgow included 2 which were referred to scarlet fever, 3 to diphtheria, 22 to whooping-cough, 4 to enteric fever, and 6 to diarrhoea. Nine fatal cases of whooping-cough and 3 of diarrhoea were recorded in Edinburgh; 3 of whooping-cough and 4 of diarrhoea in Dundee; 7 of whooping-cough and 2 of diarrhoea in Aberdeen; 5 of measles and 2 of whooping-cough in Paisley; 2 of diarrhoea in Leith; and 3 of whooping-cough in Greenock.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, April 24th, 723 births and 524 deaths were registered in the twenty-two principal urban districts of Ireland as against 650 births and 580 deaths in the preceding period. The annual death-rate in these districts, which had been 24.2, 24.4, and 26.5 per 1,000 in the three preceding weeks, fell to 23.9 per 1,000 in the week under notice, this figure being 8.1 per 1,000 higher than the mean annual death-rate in the seventy-six English towns for the corresponding period. The figures in Dublin and Belfast were 24.5 and 23.2 respectively, those in other districts ranging from 4.1 in Drogheda and 9.6 in Ballymena to 40.9 in Lisburn and 48.1 in Antrim, while Cork was 27.4 and 27.4 in Limerick and 15.9 in Limerick. The death-rate as 35.1. The zymotic death-rate in the twenty-two districts averaged 1.3 per 1,000, as against 1.6 per 1,000 in the preceding period.

Vacancies and Appointments.

This list of vacancies is compiled from our advertisement columns where full particulars will be found. To ensure notice in this column, advertisements must be received not later than the first post on Wednesday morning.

VACANCIES.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

THE British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the BRITISH MEDICAL JOURNAL is supplied weekly, post free, to every member of the British Medical Association, wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent

by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three Members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the BRITISH MEDICAL JOURNAL for non-members is £1 8s. 0d. for the United Kingdom, and £1 15s. 0d. for abroad.

SPECIAL NOTICE TO MEMBERS.

Every member is requested to preserve this "Supplement," which contains matters specially referred to Divisions, until the subjects have been discussed by the Division to which he belongs. BY ORDER.

British Medical Association.

MATTERS REFERRED TO DIVISIONS.

OPHTHALMIA NEONATORUM COMMITTEE REPORT.

The following report was approved by the Central Council at its meeting on April 28th, and the conclusions and recommendations referred to the Divisions for their consideration:—

INTRODUCTORY.

The Section of Ophthalmology at the Annual Meeting of 1907, at Exeter, having considered a paper on an enquiry into the cause of blindness in 350 inmates of a blind school, by Mr. Simeon Snell, then President-elect of the British Medical Association, passed the following resolution:—

That in the opinion of the Section of Ophthalmology, the time has come for the British Medical Association to take action for the prevention of Ophthalmia Neonatorum.

This resolution having been considered by the Council of the Association, a Committee was appointed to investigate and report upon the subject, and subsequently, upon the recommendation of the Committee, the following Societies were invited to appoint additional members:—

The Royal Society of Medicine (Obstetrical and Gynaecological Section and Diseases of Children Section).

The Ophthalmological Society.

Incorporated Society of Medical Officers of Health.

The co-operation of the Central Midwives Board was also invited.

The Committee, thus constituted, has consisted of the following:—

- Sydney Stephenson, F.R.C.S., Ophthal. Surg.
Evelina Hosp., Queen's Hosp. for Children and Queen Charlotte's Hosp. (Chairman of the Committee).
- R. C. Buist, M.D., Gynaecologist, Dundee Hosp. (Vice-Chairman).
- Simeon Snell, D.Sc. (Hon.), F.R.C.S. Edin., Ophthal. Surg. Sheffield Royal Infirmary and to School for Blind, Prof. of Ophthal. Univ. Sheffield, Cons. Ophthal. Surg. Moxhoro' Hosp., President of the British Medical Association.
- J. A. Macdonald, M.D., Phys. Taunton and Somerset Hosp., Chairman of Representative Meetings of the British Medical Association.
- Edmund Owen, LL.D., F.R.C.S., Surg. French Hosp., Cons. Surg. St. Mary's Hosp. and Hosp. for Children, Chairman of Council of British Medical Association.
- Edwin Rayner, M.D., F.R.C.S., Cons. Surg. Stockport Infirmary, Treasurer of the British Medical Association.
- C. J. Martin, M.D., F.R.S., Director Lister Inst. Preventive Medicine, Chairman of Science Committee of British Medical Association.
- C. E. Shaw, M.D., Asst. Surg. Belfast Ophthal. Hosp., Lect. Ophthal. Queen's Coll. Belfast.
- T. Arthur Helme, M.D., Hon. Phys. Northern Hosp. for Women and Children, Manchester.
- Henry Russell Andrews, M.D., Asst. Obstet. Phys. London Hosp., Lect. Midw. and Dis. Wom. and Teacher Pract. Midw. London Hosp. (representing the Royal Society of Medicine (Obstetrical and Gynaecological Section)).
- George Carpenter, M.D., Phys. Queen's Hosp. for Children, Medical Officer of Health of Beckenham (representing the Royal Society of Medicine (Diseases of Children Section)).
- Arnold Lawson, F.R.C.S., Surg. Royal London Ophthal. Hosp., Moorfields (representing the Ophthalmological Society).
- Edward Sergeant, M.R.C.S., M.O.H. Lancs. County Council (representing the Incorporated Society of Medical Officers of Health).

Upon the consideration of its reference the necessity was apparent to the Committee of having before it a full statement of the known facts affecting the subject, and the Chairman kindly undertook the preparation of a Memorandum for this purpose.

The Memorandum so prepared is printed as an Appendix to this Report, and to it are added suggestions furnished to the Chairman by members of the Committee, and documents issued by responsible bodies containing evidence upon the subject.

The Committee must express its sense of the great value of the work done by Mr. Sydney Stephenson for the Association and the profession in the preparation of his Memorandum.

The Conclusions of the Committee as to the prevalence of Ophthalmia Neonatorum are stated in Section I. of the following Report, and Section II. contains the Recommendations of the Committee as to preventive methods. These include instructions which it is considered might with advantage be issued to midwives and nurses, and suggestions which the Committee thinks should be submitted for the assistance of medical practitioners.

Before action is taken to carry out the recommendations of the Report, it appears to the Committee desirable that it should be referred for the consideration, both of the Divisions of the Association and of the Sections of Ophthalmology and Obstetrics, at the Annual Meeting at Belfast, and the Council of the Association is being advised accordingly.

Conclusions and Recommendations.

I. Prevalence.

(Pars. 2-28.)

1. Ophthalmia Neonatorum accounts for upwards of 10 per cent. of all cases of blindness.

2. Cases of ophthalmia show a slight but steady decrease so far as can be judged by returns from British Lying-in Hospitals and Departments, and Eye Hospitals.

3. Ophthalmia Neonatorum is still (as it has been for many years) the cause of at least one-third of the blindness in inmates of British Blind Schools.

4. Cases of ophthalmia without adequate treatment have been found to occur amongst cases attended by medical practitioners, as well as amongst those attended by midwives.

II. Prevention.

(Pars. 29-88.)

A. Administrative and Educative Measures.

(a) *Notification.*—It is advisable to urge upon the Local Government Board that notification of Ophthalmia Neonatorum should be compulsory.

(b) *Inspection and Treatment.*—It should be the duty of the Local Sanitary Authority, upon receipt of notification, to enquire as to the facilities for treatment, and, if these be deficient, to arrange for the efficient treatment of the disease. The treatment of infantile Ophthalmia should not involve separation of mother from child if this can be avoided.

(c) *Bacteriological examinations.*—It is suggested that the bacteriologic examination of vaginal or conjunctival discharges should be undertaken, free of charge, by the Local Sanitary Authority, when such a request is made by a qualified medical practitioner.

(d) *Educative measures.*—Notices regarding the dangers of Ophthalmia Neonatorum should be issued by Local Sanitary Authorities. They should also be exhibited in Post Offices and other public places. Such notices should be periodically distributed by the Local Supervising Authority to every midwife whose name appears on the roll of midwives for the particular area concerned.

(e) *Central Midwives Board.*—The presence of purulent vaginal discharges should be included by the Rules of the Midwives Board among the conditions for which medical help should be summoned.

(f) *Maternity Hospitals.*—It is recommended that among the members of the medical staff every Maternity Hospital should include an ophthalmic surgeon. The maintenance of accurate records concerning Ophthalmia Neonatorum is suggested as a means of keeping the disease constantly under the notice of all concerned.

B. Medical Measures.

DIRECTIONS TO MIDWIVES AND NURSES.

1.—Treatment of Cases presumably normal as regards danger of Ophthalmia Neonatorum.

Child.—In every case in which a medical practitioner is not in attendance the midwife or nurse should adopt the following routine procedure:—

- (i) Directly the head is born, and before the eyes are opened the lids and the surrounding skin should be wiped clean on each side with a separate piece of sterilized wool.
- (ii) Nothing should be dropped into the baby's eyes.
- (iii) The face and the body should not be washed in the same water. Fresh water should be taken for each.

II.—Treatment of Cases in which the Mother suffers from a purulent vaginal discharge.

(a) *Mother.*—If there is a purulent vaginal discharge, whether in pregnancy or labour, medical help must be obtained.

(b) *Child.*—If a doctor is not already present when the child is born, he should be sent for immediately, in order that any necessary application to the child's eyes may be made.

III.—Procedure where an affection of the child's eyes is observed.

If there is any inflammation of the baby's eyes, however slight, shown by redness, swelling, or discharge, the midwife or nurse must explain that the case is one in which the attendance of a registered medical practitioner is required, and medical help must be obtained in accordance with the Rules of the Central Midwives Board.

SUGGESTIONS TO MEDICAL PRACTITIONERS.

In view of the conflicting opinions regarding the precautions that should be observed by practitioners for the prevention of ophthalmia neonatorum, the adoption is advised of the following simple measures, which, it is believed, are in accordance with our most recent knowledge and experience:—

A.—Presumably non-infected Confinements.

(a) *Mother.*—A policy of non-interference.

(b) *Child.*—The practitioner should make it his business to see that as soon as possible after the head is born, and before the eyes are opened, the eyelids are cleansed with sterilized wool, and that separate water is used to wash the baby's face and body.

B.—Confinements where infection is known or suspected to exist.

a. *Mother.*—Steps should be taken to examine bacteriologically any morbid discharge from the genito-urinary passages, and appropriate treatment should be adopted for the underlying condition.

b. *Child.*—The baby's eyelids should be carefully wiped free from secretion with sterilized wool, and a single drop of a one per cent. solution of silver nitrate should be placed in each of the baby's eyes. The two per cent. solution of silver nitrate, originally recommended by Professor Credé, although most efficient in preventing ophthalmia, has been shown to be of a more irritating nature than the liquid now recommended for use. There is some evidence to prove that silver vitelline (known commercially as "Argyrol") used as a twenty-five per cent. solution, is a non-irritating and efficient preventive of ophthalmia. But so far it has not been employed on a sufficiently extensive scale to justify a more dogmatic statement with regard to its value.

The foregoing suggestions deal only with the prevention of ophthalmia neonatorum. When once the disease has broken out, it is impossible to exaggerate the importance of prompt and efficient curative treatment.

APPENDIX.

MEMORANDUM ON OPHTHALMIA NEONATORUM.

1. In accordance with the request of the Committee, the writer has prepared and now begs to present a Memorandum on Ophthalmia Neonatorum. Two aspects of this many-sided subject only need be discussed in this place, viz., I., the prevalence; and II., the prevention of the malady.

I. Prevalence.

2. Most of the stock figures that deal with the incidence of ophthalmia are derived from the Continent of Europe, and date from pre-antiseptic days. Although they are interesting, especially for purposes of comparison, yet these statistics are now a matter of more or less ancient history. It has accordingly seemed to the writer that the purposes of the Committee might perhaps be better served if his Memorandum dealt, in the main, with British figures, of which a sufficiency has been placed on record during the last few years.

3. The British figures have been derived from several sources, of which the most important are:—

- (a) Census Returns and Official Reports.
- (b) Lying-in Hospitals.
- (c) Poor Law Infirmarys and Workhouses.
- (d) Ophthalmic Hospitals.
- (e) Blind Schools and Asylums.

(a) Census Returns and Official Reports.

4. Ophthalmia neonatorum is by far the most frequent cause of blindness in children.

5. The Royal Commission on the Blind, the Deaf, and the Dumb, which reported to both Houses of Parliament in the year 1889, estimated that about 7,000 persons in the United Kingdom had lost their sight from ophthalmia neonatorum. It has been estimated by Mr. Stephen Mayou (*Medical Press and Circular*, December 16, 1908), from the census statistics for England and Wales that there are now about 3,000 children under the age of fifteen years blind from ophthalmia neonatorum.

6. It was shown by the United States census for the blind and deaf (1900), that of the totally or partially blind, 7,369 had become so before the completion of the first year of life. Of this number, ophthalmia neonatorum was probably the cause of the blindness in 25.02 per cent. (*Journal American Medical Association*, June 15, 1907). In the census taken by the Commission for the Blind in the State of New York in 1906, there were found to be 6,200 persons. Of this number, 509 were under one year of age. Of the 3,306 blind in Massachusetts, more than 20 per cent. had lost their sight before their fifth year. It was estimated that nearly one-half of the whole number had become blind as the result of ophthalmia neonatorum.

7. The most trustworthy means of estimating the prevalence of ophthalmia neonatorum (apart from its results) would obviously be by comparing the number of cases with the total number of births. In Great Britain, an accurate estimate of the kind would be possible only if ophthalmia neonatorum were included in the list of notifiable diseases, which is not, as yet, the case. A few figures from foreign countries may not be out of place in this connection. According to Cohn (*Centralbl. f. prakt. Augenheilkunde*, April and May, 1895), during the year 1804, 12,000 births were registered in the city of Breslau, and of that number at least 250 infants, or 2.35 per cent., were attacked by ophthalmia. Widmark (*ibidem*, September, 1895) showed nearly the same incidence (2.27 per cent.) among the babies born in Stockholm during the year 1884. In Mecklenburg-Schwerin, according to Schatz (*Deutsche med. Wochenschrift*, 1884, No. 1), among 18,000 babies born in the year 1882, 90, or 0.5 per cent. were affected. As regards Switzerland, Heim reports (*Inaug.-Dissert. Universität Bern*, 1895) that in the year 1892, ophthalmia attacked 0.45 per cent. of the 83,596 babies born alive. Alvarado (*Oftalmia Purulenta de los Recien Nacidos*, 1904), tells us that in the year 1897, there were 2,292 births in Valladolid, Spain, and 67 cases of ophthalmia, that is, 2.933 per cent. Alvarado calculated that the prevalence for the whole of Spain in the year 1892 amounted to 1.236 per cent. of the total births.

8. With respect to London, Mr. N. B. Harman (*Preventable Blindness*, 1907) has calculated that "amongst every 100 children born, one child suffers from purulent inflammation of the eyes in the first few days of life, and that of every 2,000 children born, one child is blinded or partially blinded by this disease."

9. Dr. Edward Sergeant, who represents the Society of Medical Officers of Health on our Committee, sends the following information:—

"The occurrence of the disease under consideration seems to be very limited in the County Palatine of Lancaster as shown by information collected under the Midwives Act. The midwives under supervision in my district attend something like 20,000 births per annum, and during the last two years—1907 and 1908—very few cases have come to our knowledge where inflammation of the eyes has been noticed during the ten days during which the midwives remain in attendance. The inspectors of midwives inform me that during the two years they have personally examined about 400 newly-born babies, and in only eight cases has inflammation of the eyes been noticed.* As the result of supervision and instruction the majority of the midwives now take the greatest care in this matter, and the inspectors specially impress upon the women the necessity of at once obtaining medical assistance if the eyes are in any way affected."

(b) Lying-in Hospitals.

10. The figures quoted below were collected by the writer in the year 1907, from six British lying-in charities:—

Institution.	Observer.	Period.	Births.	Ophthalmia neonatorum.	Ophthalmia percentage of
Queen Charlotte's Hospital, London.	—	1896-1906	12,644	42	0.33%
Rotunda Hospital, Dublin.	Dr. E. Hastings Tweedy.	1903-06	5,158	8	0.15%
City of London Hospital.	Dr. Clement Goulson.	1901-06	3,582	4	0.11%
British Lying-in Hospital, London.	Dr. G. Drummond Robinson	1898-1906	7,090	3	0.04%
Maternity Hospital, Glasgow.	Dr. R. Jardine.	1906	574	4	0.69%
Maternity Hospital, Clapham, London.	Dr. Annie M. Call.	1889-1906	5,817	18	0.30%
Totals			35,815	79	0.22%

The figures given above amount in the aggregate to 35,815 births, and of that number, 79 (or 0.22 per cent.) developed ophthalmia. This low proportion is due partly to the aseptic and antiseptic precautions with which modern medicine has surrounded childbed, and partly to the universal adoption of some more or less efficient method of prophylaxis. The figures obviously can convey no idea as to the prevalence of ophthalmia in the outside population. They rather show that by the universal adoption of suitable measures the percentage of ophthalmia neonatorum could be reduced practically to the vanishing point.

11. Mr. Stephen Mayou (*Practitioner*, 1908, p. 131) managed to obtain returns from two hospitals not included in the above table, namely, the Birmingham Lying-in Charity, and the General Lying-in Hospital, York Road, London. In the former, among 1,361 births, the morbidity of ophthalmia was 0.07 per cent., and in the latter, among 10,369 births, 0.39 per cent.

(c) Poor Law Infirmarys and Workhouses.

12. Statistics from Poor Law institutions resemble to some extent those from lying-in hospitals, although the parochial patients, as a rule, belong to a lower social class,

* This 2 per cent., however, calculated on the 2,318,529 births registered in the United Kingdom during 1896 and 1907 would mean 46,370 cases of ophthalmia neonatorum. Assuming damage to the cornea in one-fifth of the patients, the disease would be responsible for partial or complete blindness in no fewer than 9,274 children.

and the parochial arrangements, especially in the provinces, are in certain instances not so good as those of the average lying-in hospital. At the same time the Poor Law wards are under medical control, and the labours are attended by qualified nurses.

13. Two sets of figures are given below. The first was obtained by the writer in the year 1896 from the maternity wards of the London infirmaries and workhouses, and dealt with the two years 1894-1895. The second, constructed in 1907 from returns from 33 provincial institutions, included almost all the English and Welsh cities of which the population exceeded 100,000. They dealt with various periods, but were in every instance brought up to the year 1906. The chief value of the figures is in showing the improvement that has taken place in the prevalence of ophthalmia during a period that does not exceed eleven years:—

	Births.	Ophthalmia neonatorum.	Percentage.
London (30 returns) ...	4,884	176	3.605
Provinces (53 returns) ...	17,579	128	0.72

(d) Ophthalmic Hospitals.

14. Figures showing the proportion borne by cases of ophthalmia neonatorum to other disease of the eye have a restricted value only, inasmuch as they apply only to the so-called "hospital class," and as a rule, deal only with the more severe types of disease.

15. Mr. Stephen Mayou (*Practitioner*, 1908, p. 128) has collected statistics from the Moorfields Hospital, London, and also from the Central London Ophthalmic Hospital, with results given in the following table:—

Hospital.	Period.	Total patients.	Ophthalmia neonatorum.	Percentage.
Moorfields ...	1890-1906	301,458	502	0.166
C.L.O.H. ...	1904-06 (August)	26,409	57	0.15
Totals ...		327,867	559	—

16. It may be stated that amongst 5,995 cases of ophthalmia neonatorum applying for relief to eye hospitals at home and abroad, the percentage of lost or damaged eyes was 22.85.

17. The figures given below regarding the Manchester Eye Hospital show that between the years 1876 and 1885 there was a reduction in the cases of ophthalmia amounting to about two-thirds. Figures from the Glasgow Eye Infirmary, compiled by Dr. Thomas Reid, covering the ten years 1887-1896, point to a similar diminution in the disease:—

Manchester.			Glasgow.		
Period.	Patients.	Ophthalmia.	Period.	Patients.	Ophthalmia.
1876 ...	7,477	293	1887 ...	9,774	99
1877 ...	8,203	313	1888 ...	10,281	82
1878 ...	8,391	413	1889 ...	11,324	83
1879 ...	8,573	270	1890 ...	11,753	83
1880 ...	10,262	423	1891 ...	12,061	61
1881 ...	10,919	400	1892 ...	12,261	60
1882 ...	12,061	339	1893 ...	13,438	93
1883 ...	14,702	358	1894 ...	15,267	76
1884 ...	15,427	310	1895 ...	16,292	125
1885 ...	15,184	198	1896 ...	18,111	113
Totals ...	112,421	3,517	Totals ...	130,532	911

18. Dr. Leslie Buchanan (*Scottish Medical and Surgical Journal*, November, 1902) has compared the percentage-incidence of ophthalmia at the Glasgow Eye Infirmary over the several decades from the year 1860. His figures are as follows:—1860-1869, ophthalmia formed 1.3 per cent. of all eye diseases; 1870-1879, 1.01 per cent.; 1880-1889, 0.76 per cent.; while the last decade to 1899 showed a further decrease to 0.5 per cent. Curiously enough, by means of figures drawn from the same hospital, Dr. Ernest Thomson (*Ophthalmoscope*, 1908, p. 8) had endeavoured to show that ophthalmia cases are not diminishing to any marked extent in Glasgow. His figures, which covered the thirteen years 1894 to 1906 inclusive, showed a mean percentage for the first six years of 0.568, and for the last seven years of 0.497. On the other hand, Dr. John Wharton (*Ophthalmoscope*, January, 1909), has re-examined the statistics from the Manchester Royal Eye Hospital, and he concludes as the result of an elaborate analysis covering the years 1870 to 1907, "that so far as the Manchester Royal Eye Hospital is concerned, ophthalmia neonatorum cases are diminishing in frequency." Wharton's figures show that of 7,108 cases of ophthalmia neonatorum, the cornea of one or both eyes was involved in 1,257 instances, or 17.6 per cent.

(e) Blind Schools and Asylums.

19. Practically all the figures so far brought forward tend to show a diminution in the morbidity of ophthalmia neonatorum. The same conclusion, unfortunately, does not apply to the frequency of blindness, partial or complete, as the result of the disease. A glance at the following figures, collected by various writers from British schools and asylums for the blind, will attest the truth of this generalization.

20. (1) Dr. Emrys-Jones (*The Ophthalmia Neonatorum*, 1881) among 72 candidates presented for admission to Henshaw's Blind Asylum, Manchester, traced blindness to ophthalmia in 75 per cent.

21. (2) In answer to questions about ophthalmia neonatorum the Ophthalmological Society of the United Kingdom received replies from 23 institutions for the blind (*Transactions*, vol. IV, 1884). Returns from four of the asylums, the answers from which could be depended on, showed ophthalmia to be responsible for blindness in from 30 per cent. to 41 per cent. of the inmates (average, 34 per cent.).

22. (3) Mr. Simeon Snell (*British Medical Journal*, November 2nd, 1907) enquired into the causes of blindness in 321 inmates of the Sheffield School for the Blind, who are almost without exception below the age of 16 years, and found that ophthalmia neonatorum accounted for by far the largest number, namely, 136, or 42.36 per cent. of the total. The conclusion was, that "a careful consideration of the records for successive years does not even point to a diminution in more recent times." "The ravages of this disease," continued Mr. Snell, "are therefore clearly shown to be still rampant."

23. (4) Between the years 1903 and 1906, Mr. N. B. Harman (*Preventable Blindness*, 1907) examined 363 children in the schools for the blind maintained by the London County Council. Of the total number he found that 132, or 36.36 per cent., owed their condition to infantile ophthalmia. Mr. Harman declared that if certain fallacies were given due weight "the percentage of blindness from ophthalmia neonatorum would exceed 40 per cent."

24. (5) Mr. Stephen Mayou (*Practitioner*, 1908, p. 130) ascertained by enquiry from the medical officers attached to British Blind Schools (whether residential or otherwise is not stated) that of 2,569 inmates, all below the age of eighteen years, 706, or 27.48 per cent., were blind from ophthalmia neonatorum.

25. The figures quoted above may be tabulated as follows:—

Name.	Number.	Blinded by Ophthalmia.
(1) Emrys-Jones ...	72	75.0 per cent.
(2) Ophthalmological Society ...	—	34.0 ..
(3) Snell ...	321	42.36 ..
(4) Harman ...	363	36.36 ..
(5) Mayou ...	2,569	27.48 ..

26. To the foregoing list may be added some recent figures given by the Committee on Ophthalmia neonatorum of the American Medical Association (*Ophthalmoscope*, 1908, p. 427). Returns from ten blind schools, representing eight States with the Province of Ontario, showed that of new admissions (242) during the autumn of 1907, ophthalmia neonatorum accounted for 24·38 per cent. Again, figures from the Pennsylvania School for the Blind for the eight years, 1900 to 1907 inclusive, brought out the fact that of 303 admissions, 101, or 33·3 per cent., had been blinded by ophthalmia neonatorum.

The following extract from an address on "The Prevention of Early Blindness," by Dr. George Foggia (Principal Medical Officer, Newcastle-upon-Tyne Education Committee, and Ophthalmic Surgeon, Royal Victoria School for the Blind), further illustrates the same point:—"It was only seven years ago that the Committee appointed an honorary ophthalmic surgeon to the institution, and invited me to accept the position. Not till then had it been possible to give any detailed analysis of the causes of the blindness which so unfortunately made the institution necessary. For the past six years I have returned an annual summary of the cases and, as far as ascertainable, their causes, and the first thing to strike anyone in glancing at these records is the melancholy parallel found here with the experience of other similar institutions, viz., the extraordinary number of cases in which blindness has supervened in the earliest days of infancy. Thus in the successive years ophthalmia of the newborn claimed the following percentages of all our cases:—

1902	34·6
1903	39·1
1904	37·1
1905	35·8
1906	36·4
1907	31·6

or an average of 36·1 per cent."

27. While disclaiming the least desire to underrate the value of the figures just quoted, the writer would remark that certain more or less obvious fallacies should be borne in mind when attempting to estimate their true value. First, we have to consider the trustworthiness or the reverse of the returns upon which the figures are based. Mr. Snell's figures are almost free from objection on this score, since practically all the inmates of the Seafie institution were examined by Mr. Snell himself. On the other hand, the relatively small percentage given by Mr. Mayou can probably best be explained not by an actual diminution in the results of the disease, but by laxity in some of the medical returns furnished by various blind schools, and, indeed, Mr. Mayou himself comments upon the great variations in the statistics. Secondly, it is obvious that the blind schools, which are intended for young people, cannot give information as to the proportion borne by blindness caused by ophthalmia neonatorum to blindness in general. Again, a correction may possibly be found necessary when the results of the operations in recent years of the Midwives' Act are ascertainable. In Manchester, at least, there is evidence that the system of notification by registered midwives has already secured earlier attention to cases (see Schedule). Lastly, there are statistical fallacies that must always surround the ratio borne by the number of pupils to the total population of a given locality.

Conclusions.

28. The following conclusions appear to be justified by the facts adduced in the foregoing pages:—

1. That ophthalmia neonatorum accounts for upwards of 10 per cent. of all cases of blindness.
2. That ophthalmia causes more or less damage to sight in about one-fifth of the cases brought to hospital for treatment.
3. That so far as can be gathered from Lying-in Hospitals and Departments and from Eye Hospitals in this country, the number of cases of ophthalmia shows a slight but steady decrease.
4. That blindness due to ophthalmia, as estimated by returns from British blind schools and asylums, manifests no particular diminution during the last few years. Ophthalmia neonatorum is still, as it has been for many years, the cause of at least one-third of the blindness in all inmates below the age of sixteen or eighteen years.

II. Prevention.

29. The various means that have been suggested or
SUPP. 2

adopted for the prevention of infantile ophthalmia may be considered under two heads:—

1. Administrative measures.
2. Medical measures.

Whatever steps be adopted, co-operation between obstetricians, medical officers of health, ophthalmic surgeons, and general practitioners is of the utmost importance.

1. Administrative Measures.

30. (a) *Notification*.—The obligatory notification of ophthalmia neonatorum is a measure that has often been advocated. It has been adopted in Switzerland, Germany, Austria, and France. Moreover, in consequence of the action taken some twenty years ago by the American Ophthalmological Society, the notification of ophthalmia has been made obligatory in at least fifteen States, the population of which amounts to upwards of 38,000,000 (*Transactions American Ophthalmological Society*, 1908, p. 742).

31. The outstanding advantages of notification are: (1) the arousing of the public interest in a disease believed by the authorities to be important enough to call for notification; (2) the possibility of securing proper treatment for the baby's eyes at the earliest moment; (3) the safeguarding of others from infection; and (4) the compilation of exact statistics with regard to the prevalence and results of infantile ophthalmia.

32. In the United Kingdom the machinery for notification already exists, and ophthalmia could probably be scheduled among the so-called "infectious diseases" by a simple stroke of the administrative pen. Section 7 of the Infectious Disease (Notification) Act, 1889, provides that "the Local Authority of any district to which the Act extends, may, from time to time, by a resolution passed at a meeting of such Authority . . . order that this Act shall apply in their district to any infectious disease other than a disease specifically mentioned in this Act." The approval of the Local Government Board is necessary to such an order of the Local Authority. The adoption of notification was rendered compulsory on every urban, rural, and port Sanitary Authority throughout England and Wales by the Infectious Disease (Notification) Extension Act, 1899.

33. The writer ventures to suggest that it would be a most desirable thing to render ophthalmia neonatorum notifiable under the Infectious Disease (Notification) Acts, 1889 and 1899. It may be noted that Lord Robert Cecil, speaking in the House of Commons on March 17th, 1908, suggested that ophthalmia neonatorum might be rendered notifiable, by circular or otherwise, by the Local Government Board.

34. Notification should be carried out within a certain number of hours after the baby's eyes have been observed to be red or to run with matter, and the responsibility of reporting the disease should devolve upon the medical man, midwife, nurse, or other person in attendance upon the mother.* Any failure to comply with the law should entail an adequate penalty, monetary or otherwise.

35. The Local Sanitary Authority is clearly indicated as the body to which the disease should be notified. Under the Midwives Act, 1902, "Every council of a county or county borough throughout England and Wales shall be the local supervising authority over midwives within the area of the said county or county borough." From the present standpoint, the convenience of this arrangement is obvious.

36. Mr. J. Jameson Evans (*Birmingham Medical Review*, December, 1907, p. 291) has suggested that the Local Authority should be prepared to conduct bacteriological examinations of vaginal or conjunctival discharges, free of charge, when requested to do so by a medical practitioner. The suggestion has been endorsed by the Committee on ophthalmia neonatorum of the American Medical Association, which reported in June, 1908. In England such bacteriological work is already undertaken by many Local Sanitary Authorities as regards diphtheria, tubercle, and typhoid fever, so there would probably be no great difficulty in getting ophthalmia, and, possibly, purulent vaginitis, included in the list.

37. In a case where damage to sight followed neglect to notify, or to treat, ophthalmia, there would probably be no difficulty in getting the National Society for the Prevention of Cruelty to Children to undertake a prosecution under the

* Onus now thrown by law upon the medical practitioner, head of family, nearest relative, any person in charge of patient, or, in default of those, the occupier of the building.

Children Act, 1908, in addition to any legal action that might be taken by the Local Sanitary Authority under the Infectious Diseases (Notification) Act, 1889.

38. The objection has been raised that notification would imply a slur upon the parents' morality. Such an argument (if it amounts to as much) might carry greater weight if ophthalmia neonatorum resulted exclusively from a gonococcal infection, but everybody now recognizes that such is not the case. According to statistics compiled by the writer from the practice of 41 observers, amounting, in all, to 1,658 cases of ophthalmia neonatorum, gonococci were found in the discharge from the eyes of 67.14 per cent. In 171 personal cases, the organism in question was present in 106, or 61.98 per cent. In view of these figures, it may be stated, roughly, that about two-thirds of all cases of ophthalmia neonatorum brought to hospital are associated with and due to the gonococcus. There need be no publicity in notification as it is now carried out by the Health Authorities.

39. Another more tangible objection is that notification would lead to no beneficial results unless accompanied by provision for treatment of the babies. It has been suggested by Mr. N. B. Harman (*Preventable Blindness*, 1907) that a small special hospital, with adequate nursing staff, should be provided in each county for the treatment of cases, the number of which would not be great.* Another measure (and a very admirable one) has been carried out in the City of Liverpool, where by co-operation between the Health Authority and the St. Paul's Eye and Ear Hospital, arrangements have been made to admit both mother and child into a ward set aside for the purpose in the latter institution (*Lancet*, May 2nd, 1908). The Health Authority sends an ambulance, whenever required, to effect removal of mother and baby to the hospital.† Action is taken under the Notification of Births Act, 1907 and the Midwives Act, 1902. In Manchester, a Conference was held on March 5th, 1908, between representatives of the Royal Eye Hospital and the Midwives Supervising Medical Sub-Committee to consider what action could be taken to prevent the occurrence of ophthalmia neonatorum. As a result, the authorities of the Royal Eye Hospital undertook to notify to the Committee all such cases presented at the Hospital for treatment. The number of cases of ophthalmia neonatorum notified by the midwives in Manchester since the Midwives Act came into operation have been 1905—13, 1906—15, 1907—42, 1908 (January to June) 27. The number of births attended by midwives approximately 1905—10,233, 1906—11,299, 1907—11,128. At Moorfields, Queen's Jubilee Nurses receive training in simple ophthalmic work and some are always attending a course of instruction there. The services of these nurses are utilized by the hospital when requested, though they are not used in any straightforward case of ophthalmia. The third House Surgeon has charge of cases of ophthalmia, which he sees as often as he thinks necessary, referring them to members of the surgical staff only if complications arise.

40. The Liverpool plan affords an almost ideal method of grappling with a large proportion of the cases of infantile ophthalmia, and affords an excellent instance of what may be accomplished by co-operation between health authorities, on the one hand, and local hospitals, on the other. The writer does not hesitate to suggest that what has been successfully initiated in Liverpool might well be initiated in London and other large cities.

41. Apart from this, there would probably be no great difficulty in the case of poor people, amongst whom ophthalmia is especially prevalent and destructive, in transferring mother and child to the temporary care of the Poor Law authorities, which might reasonably be asked to make provision for such cases. Mothers of rather better social class, unable to provide adequate medical and nursing attendance for the baby, might still be transferred, as in the case of zymotic ailments in London, to the parochial authorities, as represented by the Asylums Board.‡ The

writer, however, regards the Liverpool plan as the better one, if only because specialist medical treatment would thereby be assured.

42. Another plan suggests itself, namely, that the Local Sanitary Authorities of the smaller towns, where no special ophthalmic hospital exists and no suitable infirmary is available, should set aside a ward for the reception of ophthalmia cases in the local isolation hospital. In rural districts the joint isolation hospital would naturally be used for the purpose.

43. In brief, the writer would urge upon the Committee the advantages of the notification of cases of ophthalmia neonatorum, as well as its practicability under the Infectious Diseases (Notification) Acts, 1889 and 1899. Dr. George Carpenter's letter (1), appended to this memorandum, should be referred to in this connection.

44. It would be interesting to know what provision is made by ophthalmic hospitals in London and elsewhere for the treatment of ophthalmia neonatorum. Are such cases ever admitted to the general wards, or are special wards provided, and if not, what plan is adopted for their treatment as out-patients?

45. (b) *Education of medical men, students, midwives, and the public.*—It can scarcely be too strongly insisted on that the occurrence of a case of ophthalmia neonatorum implies, almost of necessity, that somebody is to blame, be it medical practitioner or midwife, who has failed to secure effective preventive treatment at the proper time. The occasion appears to the writer to have come for perfectly plain speaking on this somewhat delicate point.

46. Theoretically, every medical practitioner is acquainted with the measures that should be adopted to prevent the disease, as well as with those that should be taken to cure ophthalmia when it has once broken out. What do we actually find to be the case? Here are a few figures and statements which deal with the point.

47. Mr. Stephen Mayou (*Practitioner*, 1908, p. 359) investigated 162 confinements complicated with ophthalmia, and ascertained that 90 had been attended by medical men, and 72 by midwives. The present writer found that of 62 cases of ophthalmia neonatorum a medical man had been in attendance upon the mother in 37, or upwards of one-half (*Ophthalmia neonatorum*, 1907).

48. Neither is the medical profession, speaking broadly, as familiar as it should be with the treatment of the affection. The writer has had babies blinded by ophthalmia brought to him with the history that the infant had been under medical treatment of some inefficient kind. To quote from a communication by Mr. E. Treacher Collins (*Practitioner*, 1902, Part 1, p. 440): "sad to relate, cases in which delay in the application of appropriate treatment has resulted in permanent damage, are met with where the mothers have been attended by a duly qualified medical man, and not by an ignorant midwife."

49. As regards maternity nurses, who appear to attend at least one-half of the confinements in England, the rigid application of the Midwives Act, 1902, should simplify matters considerably.* The present regulation (Rules framed by the Central Midwives Board under section 31 of the Midwives Act, 1902) allows the women under the control of that body—i.e., all certified midwives in England and Wales—practically a free hand. It reads as follows:—"As soon as the child's head is born, and, if possible, before the eyes are opened, its eyelids should be carefully cleansed." The writer does not know whether action has yet been taken against a midwife for disregarding this clause. "Inflammation of the eyes, however slight," is scheduled as a condition, which when present in the child constitutes a state of things in which medical help must be sent for by the midwife. The Board has taken action in several instances where midwives have failed to summon medical assistance in such cases.

50. Notwithstanding all this, the writer has known of instances where supposedly qualified midwives have not only dissuaded parents from sending a case of ophthalmia to hospital, but have even attempted to treat the disease themselves. His experience is not altogether singular. Dr. Adolph Bromer (*Medical Press and Circular*, September 4th, 1907) states that "last year at the Bradford Royal Eye and Ear Hospital I saw no less than five cases of purulent ophthalmia, in which the midwife had treated the eye for

* Such a scheme has been urged by Mr. H. H. Folker, Ophthalmic Surgeon to the North Staffordshire Infirmary, at a conference of public bodies held recently at Stoke-on-Trent. The steps suggested by Mr. Folker included—notification, verification, and removal of mother and child to a small house set aside and staffed for the treatment of such cases, and maintained from the rates.

† Under the Public Health Act, 1875, any Local Authority may make provision for the conveyance to a hospital, or other place of destination, of persons suffering under any infectious disorder.

‡ Under the Infectious Disease (Notification) Act, 1889, the Local Authority may pay the expenses of a person in hospital, even although such person may not be a pauper, and may provide nursing attendance on patients who cannot be removed to hospital.

* On and after April 1st, 1910, it will be illegal for any woman to attend women in childbirth for gain, unless she be on the roll of midwives under the charge of the Central Midwives Board.

several days and not sent for a doctor. Three of these children are now hopelessly blind."

51. The Central Midwives Board represents many interests, as, for example, the College of Physicians, the College of Surgeons, the Society of Apothecaries, the Incorporated Midwives Institute, the Association of County Councils, Queen Victoria's Jubilee Institute for Nurses, and the Royal British Nurses Association, as well as two members nominated by the Lord President of the Privy Council. It might be worth the while of the Committee to discuss whether a place upon the Board should not be assigned to a representative of the Ophthalmological Society of the United Kingdom. The interests at stake appear to justify such a proposal.

52. Be that as it may, it seems plain that so far as they have not already done so, the Central Midwives Board should adopt four measures with regard to ophthalmia:—(1) To give plain directions for the preventive treatment of the baby's eyes in (a) normal and (b) abnormal confinements; (2) to insist upon the notification of cases to the proper quarter, be it the Sanitary or the Local Supervising Authority; (3) to punish all midwives who fail to summon medical help on the appearance of a case of ophthalmia; and (4) to make it a penal offence for a midwife to undertake, except under medical supervision, the treatment of a case of ophthalmia neonatorum.

53. Lastly, it has been proposed that the Central Midwives Board should include purulent vaginitis in the mother among the conditions in which medical help should be sent for by the midwife (N. B. Harman).

54. It goes without saying that students in their hospitals, and midwives in their maternities, should be given practical instruction as regards the means of preventing ophthalmia neonatorum. Every text-book of midwifery, whether for practitioners, students, or midwives, should include an account of the disease, together with clear instructions as to prophylaxis.

55. The education of the public opens up large questions, but is, nevertheless, most desirable.

56. Such a step was urged by the Ophthalmological Society in 1885 (*Transactions*, Vol. V., p. 31), but nothing tangible came of the recommendation, nor did the Society press the matter further. The Society suggested that the information should be embodied in a brief circular (for copy see Appendix 2 to this memorandum) to be read over and presented by the Registrar to each person who registered the birth of a baby. Since registration may be effected within forty-two days of the birth, and not necessarily by the mother or father of the infant, it is obvious that the step suggested by the Society could not save the infant whose birth was registered, and might be useless even as regards later children of the same parents.

57. The Royal Commission on the Blind, &c. (1889) recommended that information about ophthalmia neonatorum should be circulated by the Sanitary Authorities or through the Post Office.

58. The situation has materially changed within the last year or so. The Notification of Births Act, 1907, the adoption of which, unfortunately, is optional as regards any Local Authority, provides that notice of birth shall be conveyed in writing to the Medical Officer of Health of the district in which the child was born within thirty-six hours after the birth. The onus of making the notification is thrown upon "the father of the child, if he is actually residing in the house where the birth takes place at the time of its occurrence, and of any person in attendance upon the mother at the time of, or within six hours after, the birth." The Local Government Board may by order declare that the Act be in force in the area of any Local Authority which has power to adopt the Act, although it has failed to do so. The Notification of Births Act, 1907, applies to Scotland and to Ireland, as well as to England and Wales.

59. Under existing conditions, on receiving an official intimation of a birth, the Medical Officer of Health might readily post or deliver to the parents a slip regarding the dangers of ophthalmia neonatorum, such as that drawn up by the Ophthalmological Society nearly twenty-five years ago. As a matter of fact, this has already been done in some instances. For example, in the Metropolitan Borough of Marylebone, on registration of a birth, the house is visited by a lady sanitary inspector from the office of the Medical Officer of Health. She leaves with the parents a printed card headed "Children's Eyes and how to care for

them," a copy of which will be found in the schedule (4) attached to this memorandum. The greatest importance must be attached to such dissemination of knowledge concerning ophthalmia neonatorum, and the rapidly extending system of employment of lady health visitors appears well adapted for the purpose.

60. It should be pointed out that some corporations, as, for example, those of Glasgow and Bradford, have for some time distributed through the registrars notices regarding ophthalmia to all who register the birth of a baby. The circulars are printed at the expense of the corporation, and are distributed by the registrars without charge or fee. Such notices, moreover, have for the last year or so been distributed by the Health Department of some metropolitan boroughs, as that of Marylebone, and of some urban councils, as that of Beckenham, Kent (see Dr. Carpenter's communication No. 1 in the Schedule).

61. Certain hospitals, as the Sheffield Royal Infirmary and the Bradford Royal Eye and Ear Hospital,* have adopted a similar plan. The forms adopted by those progressive institutions will be found in the Appendix. It may be noted that warnings have also been issued by the Committee of Gardner's Trust for the Blind, 53, Victoria Street, London, S.W. Mr. Henry J. Wilson, the secretary, informs the writer that over 70,000 of the circulars have been distributed in recent years through Boards of Guardians, mothers' unions, district visitors, societies for the blind, and other agencies. Finally, the North of England Union for the Blind issues leaflets dealing specially with the prevention of ophthalmia in babies.

62. In the writer's opinion, the time has come when sporadic action, such as that noted above, should be replaced by concerted action for the purpose of warning the public of the manifold dangers of neglected infantile ophthalmia.

63. (c) *Appointment of ophthalmic surgeons to Maternity Hospitals.*—This recommendation, for which we are indebted to Dr. A. Pinard (*Ann. de Gynéc. et d'Obstét.*, January, 1902), has been endorsed by Mr. E. Treacher Collins and other writers. In the United Kingdom such appointments have been made in a few instances, viz., at Queen Charlotte's Hospital, London, the Rotunda Hospital, Dublin, and the Maternity Hospital, Glasgow.

64. The appointment should be made with a serious purpose, and not be looked upon as a merely ornamental one. The preventive treatment should be under the control of the special officer, and without his knowledge and consent no change should be made in the methods employed. Under the present somewhat haphazard system the methods of prophylaxis are apt to change with each successive resident medical officer. The ophthalmic surgeon should be responsible for seeing that proper records concerning ophthalmia are kept up. It should devolve upon him to instruct pupils as to the methods of preventing the disorder. He should be called immediately to any baby whose eyes showed signs of inflammation; and, lastly, he should conduct any treatment that might be deemed necessary for the condition.

65. (d) *The Keeping of Records.*—While the records of ophthalmia at some lying-in hospitals leave little to be desired, the reverse is true of some others. It would be advisable, in the writer's opinion, to insist that proper records should be kept at every such public institution.[†] In the case of the Poor Law lying-in wards, this desirable end has already been secured by the Local Government Board Circular Letter of 1896.

66. Indeed the action of the Local Government Board in the year 1896 was the main factor in reducing the prevalence of ophthalmia in the London Poor Law Institutions by more than one-half in the course of a single decade. As already shown, in 1894–1895, the morbidity of ophthalmia was 3.60 per cent. of all babies born alive. In the same Institutions (according to information furnished to the present writer by Dr. Arthur Downes, Local Government Board Inspector) during the three years 1903–04–05 there were 125 cases in 8,889 births, or 1.406 per cent. The diminution was really greater than is shown by the figures, inasmuch as the 125 cases included many examples of trivial inflammation of the conjunctiva, and no distinction was made between "early" and "late" infections.

* The Bradford notices are sent to the registered midwives every year.

† The Committee on ophthalmia neonatorum of the American Medical Association, which reported on June, 1908, recommended the maintenance of proper records in all maternity institutions and other hospitals in which children are born.

67. It does not admit of doubt that the maintenance of accurate records would be an effectual way of keeping the subject of ophthalmia neonatorum under the notice of all concerned. Finally, the necessity of securing exact data must be apparent to anybody who is interested in what has been called the "sociological aspect" of ophthalmia neonatorum.

2. Medical Measures.

68. (a) *Management of the parturient woman.*—Attention to the condition of the mother is important, since she is the source, direct or indirect, of the infection in practically every case of ophthalmia neonatorum. One obvious precaution was recommended by Dr. Benjamin Gibson (*Edinburgh Medical and Surgical Journal*, 1807, p. 160) more than a century ago, and that was to cure, if possible, fluor albus during pregnancy.

69. Gibson's second aphorism—"To remove artificially as much of the discharge as possible from the vagina at the time of delivery"—embodies an equally evident precaution. In normal labour the routine employment of vaginal douches, antiseptic or otherwise, is deprecated by many good authorities, since douches are credited with destruction of the normal germicidal action of the maternal secretions. There can, however, be no objection to their use when infection is known or suspected to exist, either from the history of the case or from the presence of clinical signs. The writer does not venture to suggest how such cases may best be treated, but would refer the Committee for information on this and cognate points to the able memorandum drafted by Dr. Russell Andrews and Mr. Arnold Lawson (see No. 9 in Schedule). His technical knowledge, too, is not sufficient to allow him to express an opinion as to the value or otherwise of Döderlein's suggestion—namely, to place a tampon of wool soaked in lactic acid in the vagina for twenty to thirty minutes before the os dilates, for the purpose of restoring to some extent the normal acidity of the vaginal secretion lost during childbirth or uterine catarrh (*The Ophthalmoscope*, 1908, p. 2). He would, however, urge the desirability of one precaution, viz., the necessity of careful cleansing of the vulva whether infection is or is not believed to exist.

70. (b) *Management of the Baby.*—Last, but not least, we come to the management of the baby's eyes, a point about which there is likely to be some divergence of opinion. Upon this point it must be conceded that the opinion of the obstetrician is likely to carry more weight than that of the ophthalmic surgeon.

71. The methods in use may be classified as *Aseptic* and *Antiseptic*, the former essentially consisting in preventing micro-organisms from reaching the baby's eyes, and the latter in destroying them after they have reached the conjunctival sac.

72. It may be accepted as proved that the careful adoption of very simple measures will reduce the incidence of ophthalmia neonatorum to a very low point. For example, the mere wiping of the infant's eyes free from adherent secretion as soon as possible after the head is born, a procedure to which no possible objection could be raised by the most fastidious parent or exacting relative, reduced the cases of ophthalmia in Korn's experience to 0·3 per cent. (*Arch. f. Gynäk.*, Band XXXI, 2, p. 240), and in Snell's to zero (*Lancet*, September 1, 1888). Korn made the significant statement that the offspring even of mothers suffering from granular vaginitis or other evidences of gonorrhoea, remained free from ophthalmia when this simple expedient was adopted.

73. The aseptic plan, of course, must fail when gonococci or other pathogenic micro-organisms have reached the conjunctival sac, either prior to the onset of labour or during the passage of the head through the maternal parts. At the same time, the above figures (and more could readily be quoted) show that, in general, simple cleanliness may be depended on to prevent the disease. If that point be conceded, it follows that so simple a plan has much to commend it for adoption in all normal lying-in cases. It is to be noted, however, that no British Lying-in Hospital from which returns are at hand depends upon the plan, for in every single instance some chemical agent, as silver nitrate or corrosive sublimate, is used as well.

74. Elsässer (Schmidt's *Jahrbücher*, 1835) appears to have been the first obstetrician to attempt to prevent ophthalmia by the use of a chemical agent, namely, chlorine water. In the year 1873, Kehler dropped into the infant's eyes a 1 per

cent. solution of silver nitrate. It will be apparent, therefore, that the antiseptic preventive treatment of ophthalmia had been adopted in individual cases for many years prior to 1881, when Crédé published the first (*Archiv f. Gynäk.*, Band XVII, p. 50) of his three memorable communications. At the same time, to Crédé unquestionably belongs the credit of having devised and systematized the most practical means of preventing ophthalmia neonatorum, which before his discovery had been a veritable scourge in maternity hospitals. As everybody knows, Crédé advised the application of a single drop of a 2 per cent. solution of silver nitrate, placed in the baby's eyes as soon as convenient after birth. During a period of about three years, Crédé adopted the plan in 1,160 babies born alive, and amongst that number had one case, or at most two cases, of ophthalmia. Vaginal douches, at first employed by Crédé, were abandoned as soon as it was found how successful the new method was.

75. The following figures, collected respectively by Haab, Köstlin, and the writer, will show at a glance what results have been obtained by the Crédé method:—

Name.	Year.	Reference.	Births.	Per-centage.
Haab	1886	<i>Corr.-Blatt. f. Schw. Aerzte</i> , XV, 1886, p. 7	10,521	1·0
Köstlin	1895	<i>Arch. f. Gynäk.</i> , 1895 ...	24,724	0·655
Stephenson	1907	<i>Ophthalmia Neonatorum</i> , 1907	51,728	0·751

76. In order to appreciate the full significance of the figures just given, it should be stated that prior to Crédé's discovery, the incidence of ophthalmia neonatorum in fifteen Continental maternity hospitals ranged from 12·52 per cent. to 0·3 per cent., and averaged 4·05 per cent. The number of babies born in those institutions during the period covered by the figures amounted to 118,489 (see Haussmann's *Die Bräuhautinfektion der Neugeborenen*, 1882). A glance at the table will show that amongst 86,973 births the adoption of the Crédé method reduced the incidence of ophthalmia to 0·802 per cent. In face of such figures it becomes difficult to see how it can be urged, as it apparently still is in some quarters, that the plan is inefficient. It may be inexpedient but it assuredly is not inefficient.

77. The main objections urged against the adoption of Crédé's method are:—(1) conjunctival catarrh; (2) conjunctival hemorrhage; (3) corneal opacities; and to these must be added perhaps the most important of all (4) considerations of expediency.

78. (1) Crédé himself (*loco citato*) recognized that slight hyperemia was not uncommon after the use of the silver drops, and that for the first twenty-four hours a rather marked secretion from the eye was sometimes present. Babies born at term, however, showed practically no reaction.

79. Much has been made of the reaction by certain writers, more especially by H. Cramer (*Archiv f. Gynäk.*, LIX, Heft 1, 1899, p. 165), whose observations have not been confirmed by independent evidence, and who, by the way, departed very far indeed from Crédé's instructions as to how the silver should be applied. To judge from observations made under the direction of the present writer at Queen Charlotte's Hospital, London, it seems that some slight reaction occurs in most of the babies to whose eyes silver has been applied.* But a really severe reaction was not found once among 272 infants kept under close observation. Even in the most pronounced cases discharge did not persist for longer than 24 days.

80. Although the writer is not convinced in his own mind that the silver has ever set up actual inflammation of the conjunctiva, yet he is constrained to admit that it may possibly predispose to such inflammation by lowering the resisting powers of the eye.

81. It is worth noting that Zweifel (*Centrabl. f. Gynäk.*, December 22nd, 1900) has shown that the reaction is probably due to the absence of saline tears from the baby's eye, and consequently that it may for all practical purposes be abrogated if neutralization after the application be carried out with a weak saline solution. The process recommended

* It is to be carefully noted that in these experiences a 1·5 per cent. solution, and not the 2 per cent. one as recommended by Crédé, was used and that a single drop only was applied to each eye.

up a memorandum of instructions relating to ophthalmia neonatorum, which will be delivered to those parents who notify a birth to the Public Health Department.

It runs as follows:—

NEW-BORN INFANTS AND OPHTHALMIA.

If Baby's eyelids become red or swollen, or the eye begins to run with matter within the first fortnight of birth, it is to be seen by a doctor without a moment's delay. The disease, called ophthalmia, is very dangerous, and if not treated, may destroy the sight of both eyes.

For those patients requiring hospital treatment (and hospital treatment is essential in all cases that cannot employ skilled medical supervision and efficient nursing), it is of importance that the mother and child be not separated. Therefore, provision for the admission into hospital of the mother as well as the infant must be made.

In Beckenham it appears to me that there are two institutions that could be made available for such a purpose should the occasion arise, viz., the Cottage Hospital, or a special ward at the Infectious Diseases Hospital. To prevent blindness, the aims must be early recognition, followed by prompt and efficient treatment. The Notification of Births Act affords the ideal channel by which early recognition of ophthalmia neonatorum can be obtained—the machinery is at hand for the purpose. I do not know if the Council possess powers to make a slight but necessary addition, or should they not possess them, if the necessary powers can be obtained to enable them to make the notification of ophthalmia neonatorum compulsory. But whether or not, I have no doubt that if such powers could be exercised it would be to the advantage of the Public Health. I have therefore urged my Council to take the necessary steps to obtain such powers forthwith.

In my opinion, the Public Health Department is the best machinery for obtaining early information of cases of ophthalmia neonatorum, and also for making the necessary arrangements for prompt isolation and treatment of the disorder.

GEORGE CARPENTER, M.D. (Representing the Section for the Study of Disease in Children of the Royal Society of Medicine), Medical Officer of Health for Beckenham: Vice-President of the Royal Society of Medicine.

February 6th, 1909.

2. Notice drafted by the Ophthalmological Society in 1884—

INSTRUCTIONS REGARDING NEW-BORN INFANTS.

If the child's eyelids become red and swollen, or begin to run with matter, within a few days after birth, it is to be taken without a day's delay to a doctor. The disease is very dangerous, and, if not at once treated, may destroy the sight of both eyes. (*Transactions*, Vol. IV, 1884, p. 34.)

3. Glasgow Notice—

HINTS ABOUT THE MANAGEMENT OF CHILDREN.

(Given to Parents at time of Registration of Birth.)

Eyes.—At birth, cleanse the eyelids and thereabouts carefully with clean warm water. If the eyes look red, or run with matter a few days after birth, let the doctor see them at once. The eyes may be destroyed if not treated immediately. The discharge is infectious.

A. K. CHALMERS,
Medical Officer of Health.

4. Marglebone Notice—

Extract from Notice issued by the Public Health Department of the Borough of Marglebone.

CHILDREN'S EYES AND HOW TO CARE FOR THEM.

Inflammation of the eyes of the new-born child is a very dangerous and infectious illness, and if prompt measures are not taken may entirely destroy the sight.

1. When a child is born, it is wise to thoroughly wash out its eyes with water. The baby's eyes should be examined daily for a week after birth, and if there is the slightest discharge send for the doctor at once.

2. Remember that this disease is very catching if the discharge should get into the eye of another person.

MEREDITH YOUNG.

5. Sheffield Royal Infirmary Notice—

IMPORTANT.

If a baby's eyes run with matter and look red, a few days after birth, take it at once to a doctor. Delay is dangerous, and one or both eyes may be destroyed if not treated immediately.

6. Bradford Royal Eye and Ear Hospital Notice—

INSTRUCTIONS REGARDING NEW-BORN INFANTS.

If the child's eyelids become red and swollen, or begin to run with matter within a few days after birth, it is to be taken immediately to a doctor. The disease is very dangerous, and if not at once treated, may destroy the sight of both eyes.

7. Leaflet issued by Gardner's Trust for the Blind—

PREVENTION OF BLINDNESS IN INFANCY.

One of the most frequent causes of blindness "is the inflammation of the eyes of new-born infants, which can be prevented, and, if taken in time, cured. . . . about 7,000 persons in the United Kingdom have lost their sight from that cause."—*Extract from the Report of the Royal Commission on the Blind, the Deaf and Dumb, &c.* It has been found that over 30 per cent. of the inmates of the schools for the blind are blinded by the neglect and unsuitable treatment of this disease.

The following precautions are, therefore, most essential:—

1. Immediately after the birth of a baby, and before anything else is done, wipe the eyelids and all parts surrounding the eyes with a soft dry linen rag; soon afterwards wash these parts with tepid water before any other part is touched.
2. Avoid exposing the baby to cold air; do not take it into the open air in cold weather; dress the infant warmly, and cover its head, because cold is also one of the causes of this eye-disease.

When the disease appears it is easily and at once recognized by the redness, swelling, and heat of the eyelids, and by the discharge of yellowish-white matter from the eye. Immediately on the appearance of these signs seek the advice of a medical man; but in the meantime proceed at once to keep the eyes as clean as possible by very frequently cleansing away the discharge. It is the discharge which does the mischief.

The cleansing of the eye is best done in this way:—

1. Separate the eyelids with the finger and thumb, and wash out the matter by allowing a gentle stream of luke-warm water to run between them from a piece of rag or cotton wool held to or three inches above the eyes.
2. Then move the eyelids up and down and from side to side in a gentle, rubbing way, to bring out the matter from below them; then wipe it or wash it off in the same manner. The cleansing will take three or four minutes, and it is to be repeated regularly every half-hour at first, and later, if there is less discharge, every hour.
3. The saving of the sight depends entirely on the greatest care and attention to cleanliness. Small pieces of clean rag are better than a sponge, as each rag is to be used once only, and then burnt immediately; sponges should never be used except they are burnt after each washing.
4. A little vaseline or lanoline should be smeared along the edges of the eyelids occasionally, to prevent them from sticking.

SPECIAL WARNING.

As many mistaken practices are often resorted to in these cases, such as the application of poultices, tea-leaves, and sugar of lead lotions, and medical advice postponed or neglected, such applications by themselves are strongly to be condemned as not in accordance with the proper methods of treatment.

8. Notice issued by the North of England Union for the Blind—

PREVENTION OF BLINDNESS.

Reprinted from the *American Journal*, "The Outlook for the Blind."

"In the opinion of those well qualified to judge, ophthalmia neonatorum is the cause of more blindness than any other local disease, excepting, perhaps, atrophy of the optic nerve.

"It has been proved to demonstration that in ninety-nine cases out of a hundred this disease is preventable, and that it may be prevented, moreover, by the use of a few simple precautions."

SYDNEY STEPHENSON, M.B.C.M., Ophthalmic Surgeon to Queen Charlotte's Hospital, London.

"The probable annual cost to the State of New York for the support of the victims of ophthalmia neonatorum is over \$110,000."

L. HOWE, M.D. (Address of the President of the Seventy-seventh Annual Meeting of the Medical Society of the County of Erie, 1898).

"Infantile ophthalmia can and must be wiped out of every civilized country."

DR. HERMANN COHN, Breslau.

"The most important of the causes of blindness with which we have to do, however, is that resulting from an infection of the eyes of the child at birth. Important, first, because it is the most common cause of blindness; second, because it affects the young child, and a long lifetime of blindness may follow; and third, because it is preventable and curable in practically every case receiving proper care. This is one of the most dangerous of maladies to vision when treatment is neglected or delayed. It is a veritable world plague. It occurs everywhere, and no country has yet succeeded in getting it under control. So widespread is blindness resulting from it, that Magnus, who has made careful statistical studies concerning it, says that out of 2,528 cases of all ages of complete blindness in Germany, 10 88/100 per cent. were due to this cause.

"In institutions the proportion is much larger. A committee of the Ophthalmological Society of the United Kingdom in 1885 estimated that about 30 per cent. of the persons concerned had lost their sight through the ophthalmia of the new-born, while in Mexico, ophthalmia neonatorum is said by Ramos to be the common cause of blindness, and 4,500, or 30 per cent. of the whole number, are blind as a result of this preventable disease.

"In the New York State School for the Blind, 39 of 150 pupils, or 26 per cent., have lost their eyes from ophthalmia neonatorum, which is a rather smaller proportion than that found in institutions elsewhere. In the State of New York more than 600 now hopelessly blind from this cause might have been spared this dreadful calamity had simple prophylactic measures been employed at the day of their birth, while in the United States are between 6,000 and 7,000 people who have been blinded by this disease.

"The eyelids of a babe are closed at birth, and the infecting material is only likely to gain access within the lids if they are separated by the finger of the accoucheur or by instruments. 'Vaginal secretion readily adheres to the eyelashes and margins of the lids, and may easily gain entrance to the eyes when first the child begins to open and shut them, or be conveyed in by insufficient care in the subsequent ablutions and wiping of the eyes. There can be no doubt that in a majority of cases infection occurs in this way.'

"As soon as the newborn child has filled its lungs with a cry announcing its individuality as an independent being, its eyes, in a certain number of cases, are threatened with blindness. After its first bath the eyes look all right, but soon the eyelids swell, becoming red, and a white, slimy liquid oozes through the fissure of the lids. On the first day little or no discharge is perceptible, and the eyes are bright, clear, and intact, but from day to day the disease grows worse. The swollen scarlet lids are smeared with white paste and liquid or creamy pus. When cleaned and opened they discharge a small stream of pap-like secretion. Now the cornea (the hard and transparent coat) is dull, and the iris and pupils are clouded. The conjunctiva (the soft mucous coat lining the inner surface of the lids and the outer

of the ball) is thickened and covered with creamy pus. In this stage the eyes can still be saved. The next stage shows ulcers on the cornea, which are apt to perforate it, and then the poisonous discharge may creep into the interior of the eye and damage the delicate structures to such a degree that sight is forever more or less destroyed, and the eyes are so disfigured that the parents ask to have them removed and artificial ones inserted.

"When it is borne in mind that all of this could be prevented by the simplest prophylactic care, the continued blinding of babies in a civilized community becomes a crime.

"Since these facts are no longer subjects of discussion, but are universally accepted by all educated medical men, the natural enquiry follows: Why, as a common sense proposition, are not these simple, harmless, preventive measures invariably employed, and why, in consequence of this neglect, does a nation sit quietly and indifferently by, making no attempt to prevent the enormous and needless waste of human eyes?

"If, as an economic proposition, it were realized how vitally it concerns the State that not one child shall needlessly become blind, thereby in many instances increasing the public financial burden, there is no doubt that early and effective measures would be instituted to protect the State from this unnecessary and extravagant expenditure of public funds.

"The part which the midwife plays in the tragedy of infantile blindness is often a leading one.

"Every women's club, every charitable society, must interest itself in protecting the babies, 'for of all ignorance which needs to be dispelled by the spirit of regeneration among us, none is more intolerable than that which wantonly permits children to be plunged into the abyss of blindness.'

"Two points must be emphasized: First, that it is the duty of the State to protect its infant citizen as a minor from the danger of blindness with which he is threatened. Second, that it is the duty of the State to protect itself from the burden of caring for the unnecessary blind.

"If the right of personal property of a minor child and the more especially of an infant be put in jeopardy, the law, representing the state, takes upon itself to stand between that child and the danger with which he is threatened. His parents or guardians may not maltreat, or starve, or otherwise abuse him. They may not misappropriate his estate if he has one. He is not permitted even to labour while of school age lest he be deprived of the privileges of education while still a child and lose thereby a right to which the state considers him entitled. Neither should negligence, nor indifference, nor ignorance rob him of one of his most precious possessions by putting out his eyes while still too helpless to protect himself. The child is entitled to the right of protection, in his weakness, by the state."

Dr. Simon Snell describes a very simple but efficacious method that had been in use by the Jessop Hospital for Women in Sheffield.

"The patients are among the poorest; some are inmates of the hospital, but the great majority are confined at their own homes. The midwives have received instructions that immediately after the head is born attention must be directed to the baby's eyes. Then with little pieces of lint, moistened in tepid water, the eyes are carefully washed, as well as the eyelid and parts adjoining. Subsequently, in washing the child, care is taken to regard against re-infection. During the last few years there have been 2,242 labours among the in-patients and out-patients. In the first 200 there were a few cases of purulent ophthalmia, but in the last 2,000, since the method has been systematically adopted, not a single case occurred. Directions were also given to the nurses that if the child's eyes looked red it was to be taken at once to the hospital, for a drop of nitrate of silver solution to be dropped into the eye. The plan depends for its efficacy on simple cleansing, and its success seems to be well worthy of note. In every suspected case, however, the consensus of medical opinion is that the prophylactic, which is harmless, should be invariably employed. Every case developing should be reported, and the final result made a matter of public record, with the midwives the use of the prophylactic should be made a routine of part of the baby's toilet, and the development of ophthalmia within five days after the birth of the child, when the birth certificate fails to record the use of the prophylactic, should result in the withdrawal of the midwife's permit to engage in the practice of obstetrics.

"The cost to the state of thus protecting a large number of

yet unborn children from certain blindness would be infinitesimal: the gain immeasurable."

9. By Dr. H. Russell Andrews and Mr. Arnold Lawson—

OPHTHALMIA NEONATORUM. GENERAL PRINCIPLES.
PREVENTIVE TREATMENT.

Although it is obvious that a certain routine should always be observed in the treatment of the eyes of all newly born infants, it is nevertheless impossible for such a routine to meet the necessities of all cases. For whilst it is of urgent importance for the most energetic steps to be taken when there is the probability of infection by gonococcus, or such like virulent organism, it is nevertheless most undesirable to submit a young baby to drastic treatment of the conjunctival sacs when the probability of such infection is remote. The wisest plan is to pay the closest attention to the condition of the mother, as being the chief origin of infection, and to adopt such a line of treatment as may be indicated by the probability, or otherwise, of infection from this source.

There can be no doubt that the treatment of Créde has been of the greatest service, but we do not think that the treatment is one to be adopted in all cases, because:—

1. The instillation of strong caustic into a healthy conjunctival sac is a proceeding to be very strongly deprecated.
2. Such treatment undoubtedly, in perfectly healthy sacs, frequently sets up a muco-purulent discharge, which would not otherwise have occurred.
3. It is apt, in the hands of midwives, to lead to undue confidence, with the disregard of other treatment, which is quite, or even more, important.

N.E.—With regard to this point, we feel that if a midwife treats every infant with silver nitrate, she will get a considerable number of cases which she will regard as ophthalmia neonatorum. Many of these being simply cases of muco-purulent discharge, the result of irritation, will clear up rapidly with simple treatment, and may lead her to minimize the danger of a true case of ophthalmia neonatorum.

We are, therefore, desirous of suggesting a few rules, which may serve as guides to the practitioner and midwife, and if any case should, in spite of these precautions, assume the appearance of an acute purulent conjunctival inflammation, we are of opinion that expert advice should be sought at once.

RULES AS REGARDS THE MOTHER, IF A PURULENT VAGINAL DISCHARGE IS PRESENT.

1. If a purulent vaginal discharge is present during pregnancy, the patient should be treated by a doctor.
2. If she is in labour when seen for the first time, a vaginal douche should be given in the first stage of labour, and repeated if possible shortly before the birth. The douche should be given with the idea of cleansing, not of disinfecting the vaginal passage, and all strong germicides, such as 1:2000 mercuric chloride are undesirable.
3. In any case of vaginal discharge, it would be advisable to secure a bacteriological report of its nature, if possible. Such a report might prove of some value with regard to the subsequent condition of the baby's eyes.

We quite realize that this, in most cases, is a counsel of perfection.

RULES AS REGARDS THE CHILD.

Rules for the treatment of the child's eyes in all cases where there is no vaginal discharge.

1. Directly the head is born, and before the eyes are opened, the lids and the surrounding skin should be bathed with 1:5000 perchloride of mercury.
2. The child's eyes should be most carefully treated, when the first bath takes place, by freely inundating the conjunctival sacs with saturated solution of boric acid. Although such washing will not prevent gonorrhoeal ophthalmia, we believe that it will prevent the mild degree of ophthalmia which is often present for the first few days after birth.
3. The conjunctival sacs should be thus washed out at least twice in the 24 hours for the first three days. We think that this precaution is one that is apt to be neglected.
4. If there is no discharge, and the eyes are freely opened at the end of this time, the danger may be regarded as over.

Rules for cases where there is a vaginal discharge.

1. In all cases of maternal discharge rather stronger measures are advisable.
2. A 1 per cent. solution of silver nitrate, or a 25 per cent. solution of argyrol or protargol should be dropped between the lids after the first washing, and this should be repeated once daily for at least three days.
3. The daily washing of the conjunctival sacs should be performed with a weak astringent such as a $\frac{1}{2}$ per cent. solution of zinc sulphate or a 1:12000 solution of mercuric chloride, and the greatest care and thoroughness should characterize the douching. Strong antiseptics, such as 1:2000 mercuric chloride, are certainly harmful, as tending to destroy the inherent resistant power of the conjunctiva.
4. The frequency of the douching should be increased to three times daily for the first three days, and on any purulent discharge appearing in spite of these measures, expert advice at a hospital, or elsewhere, should at once be sought. It would be advisable to obtain a bacteriological examination of the discharge if possible.

With regard to the notification of ophthalmia neonatorum, there is no doubt that compulsory notification would act as a deterrent in the prevention of carelessness or inefficiency, and the statistics thus compiled might have some scientific value. At the same time, it must be remembered, that the term ophthalmia neonatorum is a general expression of an inflammation which may be set up by a variety of organisms of varying virulence, and it is only in a certain proportion of cases that the vision is ever seriously threatened.

The scientific value of notification of inflammation of the eyes of the newly born is very much modified by this fact unless the notification is followed or accompanied by a bacteriological report of the nature of the infecting organism.

H. RUSSELL ANDREWS, M.D.

(Representing the Gynaecological Section of the Royal Society of Medicine).

ARNOLD LAWSON, F.R.C.S.

(Representing the Ophthalmological Society).

10. Co-operation between Queen's Jubilee Institute and Moorfield's Hospital.

The following is a brief account of the connection between the Queen's Jubilee Institute and Moorfield's Hospital:—

The question of co-operation between the district nurses and the Hospital was first suggested nearly two years ago, but the Hospital, in the first instance, felt unable to fall in with any arrangement, on account of the fact that district nurses, as a rule, had not received any special training in eye nursing.

An arrangement was then made, by which every nurse on joining the Queen's Jubilee Institute was given an opportunity of attending Moorfields for a period of Ophthalmic training free of charge, and also of attending a course of lectures given by a member of the Staff to the nurses of the Hospital.

This arrangement has been very successful, and during the last eighteen months a large number of district nurses have in this way obtained some competent knowledge of Ophthalmic nursing, and the Staff now feel able to make use of their services, which before this training was undertaken they did not think advisable in the interests of the patients. Fifty-three nurses last year were thus trained.

By the present arrangement, application for a nurse is made in the usual way to the Superintendent of the district in which the patient lives, and a nurse is sent if possible.

A certain difficulty not removed is the fact that all nurses are not members of the Queen's Jubilee Institute, and consequently it is not possible at the present time to ensure the attendance of a nurse versed in Ophthalmic work at every case where it would be required.

The only satisfactory solution that I can see would be that all district nurses should be required to produce a certificate of Ophthalmic training before undertaking the post of district nurse. All nurses that have gone through a Moorfield's training are given such a certificate, and that it is appreciated is shown by the fact that a large number of nurses have already taken the opportunity offered them.

ARNOLD LAWSON.

March 26th, 1909.

British Medical Association.

ANNUAL MEETING AT BELFAST.

SECTION OF MEDICINE.

THE Honorary Secretaries of the Section of Medicine have issued an amended notice stating that the following subjects have been chosen for the principal discussions and demonstration in the Section:

1. Wednesday, July 28th—Angina Pectoris. To be opened by Sir T. Clifford Allbutt, K.C.B.

2. Thursday, July 29th.—The Medical Aspects of Athleticism. To be opened by Dr. Tyrrell Brooks (Oxford), Dr. Clement Dukes (Rugby).

3. Friday, July 30th.—Demonstration on Gastric Illumination by Dr. Theodore Thompson.

The Honorary Secretaries of the Section are: Dr. John S. Morrow, Eia House, Antrim Road, Belfast; Dr. Lewis A. Smith, 25, Queen Anne Street, London, W.; and Dr. John E. MacIlwaine, 55, University Road, Belfast.

Meetings of Branches & Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

BATH AND BRISTOL BRANCH.

THE sixth ordinary meeting of the session was held at Bath on April 28th. The chair was taken by Mr. R. J. H. Scott, and there were twenty-six members and visitors present.

Papers and Cases.—Dr. W. P. KENNEDY read a paper on cancer treatments, which was discussed by Mr. PAGAN LOWE, Dr. MUNRO, Dr. SYMES, Dr. EDGEWORTH. Professor RUSHTON PARKER, and Dr. NEWMAN NEILD. Dr. MUNRO described a case of early Addison's disease treated with tuberculin, and remarks upon it were made by Dr. EDGEWORTH and Dr. CAREY COOMBS. Dr. F. G. THOMSON brought forward the subject of referred cardiac pain, and, in the discussion which ensued, Mr. PAGAN LOWE and Dr. EDGEWORTH joined.

CAPE OF GOOD HOPE—WESTERN PROVINCE BRANCH.

THE inaugural meeting of the session 1909 was held on April 2nd at Queen Victoria Street, Capetown. Dr. JASPER ANDERSON, President, was in the chair, and seventeen members were present.

Confirmation of Minutes.—The minutes of meetings of September 25th, 1908; October 30th, 1908; November 28th, 1908; and February 27th, 1909, were read and confirmed.

Treasurer's Account.—The TREASURER'S statement and report for 1908 were read and adopted.

President's Address.—The presidential address was delivered. Dr. J. ANDERSON urged the importance of united effort on the part of members of the profession, and showed the advantages of the Association, which would be what the members chose to make it.

Vote of Thanks.—A hearty vote of thanks to the President was carried by acclamation.

DUNDEE BRANCH.

AN ordinary meeting of this Branch was held in the Students' Union, Dundee, on March 26th, at 8.30 p.m., Professor MARSHALL in the chair. Eighteen members were present.

Confirmation of Minutes.—The minutes of the last meeting were read, approved, and signed.

Annual Representative Meeting at Sheffield.—Dr. R. C. BUIST reported on the proceedings at the Annual Representative Meeting at Sheffield.

Central Council.—On the motion of Dr. BUIST, seconded by Dr. FRASER, it was resolved:

That the Branch give notice for the Annual Representative Meeting of the following motion: That the present By-laws dealing with the Council of the Association—namely,

No. 39 et seq.—be amended by the substitution of the corresponding clauses in the By-laws attached to the Draft Charter—namely, Section VI.

Registration of Nurses Bill (Scotland).—In regard to this matter it was resolved:

That the Branch urge the amendment of the bill in the following respects: (1) That provision be made for a supplementary register of obstetric nurses. (2) That a direct representative of the obstetric nurses be added to the council. (3) That three registered medical practitioners resident in Scotland, to be appointed by the British Medical Association, be added to the council. (4) That the election of the direct representatives of the nurses be by ballot with a single transferable vote. (5) That Clause 25 of the Nurses' Registration Bill No. 2 be included as follows: This Act shall not be construed to affect or apply to any person attending the sick for hire who does not in any way assume the title of a registered nurse under the Act, and nothing contained in this Act shall be construed as conferring any authority to practise medicine or surgery or to undertake the treatment of disease. (6) That the representatives of the universities and corporations in E, F, and G be registered medical practitioners in actual practice.

Whole-time Medical Officers of Health.—The Branch approved of the proposition that medical officers of health be debarred from engaging in private practice.

Medical Certification of Patients Suitable for Hospital Treatment.—The Branch approved of the propositions:

That a medical certificate of suitability for hospital treatment be required as a condition of hospital treatment, except in case of casualties.

With a rider:

That the hospitals be supplemented by the establishment of dispensaries, free or provident, as required.

Subscribers' Lines for Admission to Dundee Royal Infirmary.—Dr. BUIST proposed and Dr. MACKIE WHITE seconded the following resolution:

That the Branch represent strongly to the directors and governors of the Dundee Royal Infirmary the inadvisability of enforcing the system of admission by subscribers' lines, which is generally recognized as unsuitable for a large general hospital, and that the system involves injurious delay in the admission of patients and causes needless sacrifice of work to the relatives who have to search for a subscriber, and that it is unequal in practice between the hospital staff and other practitioners, and is not the best method of achieving the financial success of the institution.

After a lengthy discussion, the motion was withdrawn.

Fresh Medical Institutions.—The Branch supported the resolution of the Representative Meeting on the opening of fresh public medical institutions.

Medical Inspection of Schools.—It was resolved to issue a circular to candidates for election to the Dundee School Board as to the reception by the Board of a deputation from the Branch on the appointment of medical inspectors.

EAST ANGLIAN BRANCH.

THE general meeting of the East Anglian Branch was held at the West Suffolk Hospital, Bury St. Edmunds, on Thursday, April 15th. The following gentlemen were present: D. G. Thomson, M.D., President (Norwich); W. H. Simon, M.D., President-elect (Clacton); Drs. J. S. Holden (Sudbury), Arthur Cross (Norwich), H. A. Ballance (Norwich), Sir Alan Reeve Manby (East Rudham), N. H. Lucas (Bury St. Edmunds), A. Mayo (Great Yarmouth), H. J. Thorp (Ipswich), W. Milner Burgess (Frinton-on-Sea), J. S. Hinnell (Bury St. Edmunds), H. F. Everett (Hadleigh), F. Hudson (Lavenham), A. W. Paterson (Ipswich), S. J. Given Johnston (Ipswich), H. Watson (Norwich), E. G. Archer (Feltwell), C. S. Kilner (Bury St. Edmunds), H. F. Steele (Stoke Ferry), R. McKelvie (Blasfield), J. Gutch (Ipswich), S. Johnson Taylor (Norwich), W. T. Caie (Bury St. Edmunds), E. Stock (Bury St. Edmunds), H. H. Still (Bury St. Edmunds), H. H. Brown, and B. H. Nicholson. Luncheon was partaken of at 1 o'clock, about thirty members being present. The general meeting was held at 2 o'clock, Dr. D. G. Thomson, the President of the Branch, in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Papers.—Dr. H. H. Brown (Ipswich) read a paper on the prevention and treatment of surgical shock, and the paper was afterwards discussed by Mr. BALLANCE and Dr. SIMON. Dr. C. SCOTT KILNER (Bury St. Edmunds) read notes on a case of thrombosis of the mesentery; and,

secondly, notes on a case of volvulus; and, thirdly, notes on a case of prostatectomy. Dr. CAIE (Bury St. Edmunds) read notes on a case of hydrannus.

Cases.—Dr. HINNELL (Bury St. Edmunds) showed a case of foreign body on the iris, retained for years without any symptom; a case of congenital deformity of hands and legs; and read notes on hydrocephalus impeding labour.

Tea.—At 4.30 o'clock afternoon tea was kindly provided by Mrs. Scott Kilner of York House, and Mrs. Caie.

Exhibits.—Instruments and drugs, etc., were shown by Messrs. Maw and Sons, Messrs. Burroughs, Wellcome, and Co., and Seabury, Johnson, and Co.

New Members.—At a meeting of the Council held before the general meeting, the following gentlemen were unanimously elected members: Dr. H. A. Gaitskell, M.D. (Southend), Dr. J. C. Howie, M.D. (Southend).

Election of Officers.—The following officers were nominated for the year 1909-10:—*President*, Dr. W. H. Slimon (Clacton-on-Sea); *Vice-Presidents*, Dr. Waters (Southend), Dr. Brogden (Ipswich), and Dr. Thomson (Thorpe, Norwich); *Honorary Secretary for Essex*, Dr. B. H. Nicholson; *Honorary Secretary for Norfolk*, Mr. H. A. Ballance; *Honorary Secretary for Suffolk*, Dr. Gutch; *General Secretary and Treasurer of the Branch*, Dr. B. H. Nicholson. It was unanimously resolved to confer the honour of President-elect on Dr. P. Minns of Thetford, and the Secretary for Suffolk was empowered to ask him whether he would undertake the duties. [Dr. P. Minns, in a letter to Dr. Gutch, accepted the office.]

Date of Annual Meeting.—It was resolved to hold the annual meeting at Clacton-on-Sea on Thursday, July 1st.

GLASGOW AND WEST OF SCOTLAND BRANCH: EASTERN DIVISION.

A MEETING of the Division was held in the Religious Institution Rooms, 200, Buchanan Street, Glasgow, on April 7th, 1909. Dr. MILLER SEMPLE, Chairman of the Division, presided over an attendance of fourteen members.

Confirmation of Minutes.—The minutes of the last meeting, April 13th, 1909, were read, approved, and signed by the CHAIRMAN.

Secretary's Report.—The SECRETARY read his report for the year 1908, and gave a statement of the financial position of the Division. The membership of the Division stood at 78, an increase of two over last year. The Divisional expenses amounted only to £1 12s., the balance, consisting of £4 5s., having been returned to the treasurer of the Branch. The Secretary further reported that he had acted as local treasurer to the Lynn Thomas and Skyrme Fund, and was able to send subscriptions from members of the profession in the Division amounting to £4 7s. 6d. Some conversation followed the Secretary's report, the main trend of which was in favour of more meetings of the Division being held, and, if possible, that statutory meetings be held every three months.

Early Appointment of Representative.—The SECRETARY read the recommendation by the Council of the Association in favour of early appointment of Representative to Representative Meeting, with an explanation of the necessity for altering the rules of the Division to permit this change. A motion to allow the matter to lie on the table was lost in favour of an amendment to bring the matter up for discussion at the annual meeting of the Division.

Whole-time Medical Officers of Health.—The Division, by a large majority, rejected the previous question when put against the recommendation of the Health Committee of the Association that it was desirable for medical officers of health to be entirely debarred from engaging in private practice. Dr. WISHART KERR moved, in accordance with the recommendation, that medical officers of health should be wholly engaged in that work and should not be private practitioners. Dr. SERVICE seconded. Dr. W. L. MUIR moved as an amendment that medical officers of health in cities and populous places should be whole-time officers and debarred from private practice, but in sparsely-populated districts other arrangement was necessary as it was not practicable for the medical officer of health to be a whole-time official. Dr. P. S. BUCHANAN seconded. On a vote the motion was carried by 7 to 6.

Medical Certification of Suitability of Patients for Hospital Treatment.—The SECRETARY read the report from the Hospitals Committee of the Association on the medical

certification of the suitability of patients for hospital treatment. On a vote the Division agreed to the recommendations of the Hospitals Committee.

Contributions to Hospitals by Employers and Employees.

—The Division unanimously agreed to the principle contained in the first paragraph—namely, that contributors to hospital funds (employers and employees) are not entitled to regard the use of the hospital as their right, but simply that contributions are to be regarded as a premium for proportionate insurance against liability for accident and sudden illness. The second paragraph, relating to the general acceptance of this principle with a view to the elaboration of a scheme by which such contributions should be paid to insurance companies, was rejected on a vote.

Fresh Medical Institutions.—On the motion of Dr. GRANGER, the resolution of the Hospitals Committee on the desirability of consultation with the local medical profession, as represented by the Division of the British Medical Association, before opening any new medical institution, was carried unanimously. A verbal alteration was accepted without dissent—namely, instead of (in last line of recommendation) "dealing with hospital questions" to read "dealing with such questions" as having a wider application.

Resolution from Chelsea and Fulham Division.—The SECRETARY read the resolution communicated by the Secretary of the Chelsea and Fulham Division on some alleged high-handed action of the Council of the Royal College of Surgeons of England. The letter was allowed to lie on the table.

Resignation of Honorary Secretary.—The HONORARY SECRETARY intimated that he was desirous of relinquishing his office, and asked to be relieved of his duties. The CHAIRMAN regretted that Dr. Patrick should resign, but recognized that the Division had no alternative but to accept the resignation. On the motion of the CHAIRMAN, a vote of thanks was passed to Dr. Patrick for his services as Honorary Secretary during the past six years.

Election of Honorary Secretary.—Dr. PATRICK moved that Dr. Wm. Bryce be elected Honorary Secretary for the remainder of the current year. This was agreed to unanimously.

Branch Council and its Work.—Dr. BRYCE reported on the work done on the Branch Council during the past year. The report referred to three matters of interest to the Division: (1) The alteration in the *personnel* of the Ethical Committee of the Branch so as to include representatives from the various Divisions. (Dr. Service is the Representative from this Division.) (2) The matter of the Referendum by postal vote, and the proposed alteration of the Charter to permit such a vote. (3) The payment of practitioners attending street accidents. (This matter is in the hands of the Secretary and Chairman of the Branch, who were instructed to collect information.)

The Representative Meeting.—Dr. W. L. MUIR reported on the work of the Representative Meeting at Sheffield.

Vacancy in Executive Committee.—The SECRETARY intimated that a vacancy in the Executive Committee had occurred in consequence of Dr. McKail's resignation of membership of the Association.

LANCASHIRE AND CHESHIRE BRANCH:

ASHTON-UNDER-LYNE DIVISION.

A MEETING of this Division was held on Friday, April 30th, at the Ashton-under-Lyne Infirmary. There were eighteen members present, Dr. P. N. TWOMEY being in the chair.

Nominations for Central Council.—The Division decided to nominate Messrs. Garstang, Larkin, Macfie, and Taylor as Branch candidates for election on the Central Council.

The Representative Meeting at Sheffield.—Dr. CLARKE, the Representative of the Division at the Annual Meeting, gave an account of the Representative Meeting held at Sheffield. He was thanked for his report and his services as Representative.

Medical Certificates of Suitability for Hospital Treatment.—In regard to the question of medical certificates of suitability for hospital treatment it was decided that a medical certificate should be the essential condition for treatment at a hospital except in case of casualties, in which case such a certificate should be obtained before the second attendance.

Representation of Local Profession on Hospital Boards.—It was decided that the local medical profession should be represented on the board of management of all hospitals supported by voluntary subscriptions.

Contributions to Hospitals by Employers and Employees.—It was decided that the principle expressed in the two resolutions re contributions to hospitals by employers and employees were undesirable.

Whole-time Medical Officers of Health.—In regard to this matter the Division, whilst recognizing the necessity for part-time medical officers of health in small districts, considered that whole-time medical officers of health are desirable where the principle can be carried out without imposing an undue burden on the rates.

Resolutions.—The Secretary was instructed to forward notice of the two following resolutions for discussion at the Representative Meeting in Belfast:

- (a) That immediate steps be taken by the British Medical Association to secure the return of a Parliamentary candidate pledged to represent the views of the British Medical Association, and that such Representative shall be paid an adequate salary out of the funds of the Association.
- (b) That the British Medical Association take steps to convince the Government of the advisability of amending the Workmen's Compensation Act with a view to securing payment to medical men by employers and insurance companies for emergency and other services rendered to workmen for injuries as defined by that Act.

BLACKBURN DIVISION.

A MEETING of this Division was held at the Old Bull Hotel, Blackburn, on Thursday, April 29th. There were present: Dr. MACLEIN (Chairman), Drs. Taylor, Henry, Jones, Bowen, Prebble, Bannister, and Greenwood.

Address.—Dr. GARSTANG of Altrincham, a member of the Central Council, addressed the Division on Some Questions in Medical Politics.

Nominations for Central Council.—At the close of the meeting, it was unanimously decided to support the nomination of Drs. Garstang, Larkin, Macfie, and Taylor for the four vacancies on the Central Council from the Lancashire and Cheshire Branch.

MANCHESTER (SOUTH) DIVISION.

A MEETING of the Division was held at the house of Dr. Sawers Scott, 57, Wilmslow Road, Withington, at 5.30 p.m. on Friday, April 30th, Dr. McDougall in the chair. There were nine members present: Drs. Boyd, Vipont Brown, Grant Davie, Edlin, Gregory, Chrichion Hood, Sawers Scott, and Stocks.

Apologies for Non-attendance.—Regrets for absence were received from Drs. Carnwath and Russen Rhodes.

Confirmation of Minutes.—The minutes of the last meeting were read and signed.

Joint Committee of Manchester and Salford Divisions.—Arising out of the minutes, a letter was read from Dr. Taylor stating that the Joint Committee of the Manchester and Salford Divisions had again considered the question of obtaining official recognition of the Committee as the chief representative body of the medical profession in these districts, and it had resolved to write to local authorities with that object.

Care and Control of the Feeble-minded under the Poor Law.—On this subject a letter was read from a layman, Mr. H. P. Douglas, who concluded:

My object in asking you to bring this matter before your Division is to suggest that you pass a resolution calling upon the Local Government Board to carry out the recommendations of the Royal Commission on the Care and Control of the Feeble-minded, and also the Royal Commission on the Poor Laws in so far as they concern the mentally defective; and that copies of this resolution should be sent to the President of the Local Government Board and the local members of Parliament. Such an expression of expert opinion could not but have an influence in the direction of facilitating this much-needed reform.

After due consideration the following resolution, proposed by Dr. VIFONT BROWN, seconded by Dr. SAWERS SCOTT, was unanimously adopted:

We, the members of the Manchester (South) Division of the British Medical Association, hereby urge upon the Local Government Board the desirability of carrying into effect the recommendations of the Royal Commission on the Care

and Control of the Feeble-minded, and also of the Royal Commission on the Poor Laws (both majority and minority) in so far as they concern the mentally defective. Both of these important Commissions recommend that all grades of the mentally deficient should at all ages be withdrawn from the charge of the guardians and education authorities, and be committed to the charge of a committee of the borough and county councils with which the Asylum Committees should be merged, and that supervision and control should be concentrated in one fully-equipped office under whatsoever department of Government which should deal solely with the mentally defective. We consider it of the highest importance that all imbeciles should be removed from workhouses, as recommended by a Select Committee of the House of Commons so long ago as 1899, and by the Royal Commission on the Care and Control of the Feeble-minded last year, as well as by the recent Royal Commission on the Poor Laws.

It was resolved to forward this resolution to the Local Government Board and to the Joint Committee.

Nominations for Central Council.—The following were unanimously nominated as candidates for election to be supported by the Division: Mr. Larkin (Liverpool), Dr. Taylor (Salford), Dr. Garstang (Altrincham), and Dr. Macfie (Bolton).

Paper.—Dr. GRANT DAVIE then read a paper on diphtheria, with details of an unusually early case of post-diphtheritic paralysis. This was followed by an interesting discussion in which every member present took part. The opinion was unanimous that negative bacteriological tests, in cases where signs and symptoms on the whole pointed to diphtheria, were non-reliable as an aid to diagnosis, and were to be disregarded in so far as delaying antitoxin treatment. The opinion was also given that swabs for bacteriological examination should be taken from the tissues around the pellicle, and not from the surface of the membrane itself, as was frequently done, owing to the membrane being largely composed, on its surface at any rate, of dead debris.

PRESTON DIVISION.

THE annual general meeting of this Division was held on Thursday, April 29th, Dr. R. C. BROWN in the chair.

Confirmation of Minutes.—The minutes of the last annual meeting, and of a special meeting held on January 27th, were confirmed.

Election of Officers.—The following were elected: Chairman, Dr. R. C. BROWN; Vice-Chairman, Dr. J. E. Garner; Honorary Secretary and Treasurer, Dr. W. Sykes; Representative for Division, Dr. Garner; Representative for Branch Council, Dr. Harris; Executive Committee, Drs. Petyt, Rayner, Sellers, Turnbull Smith.

Matters Referred to Divisions.

The following questions, referred to Divisions, were discussed:—Medical certificates for suitability for hospital treatment: agreed to. Contributions to hospitals: agreed to (a), not agreed to (b). Fresh medical institutions: agreed to. Sanatoriums for tuberculosis: agreed to. Medical representation on lay boards of hospitals: agreed to.

Whole-time Medical Officers of Health.—Dr. SELLERS proposed and Dr. GARNER seconded the following resolution:

That in districts where salary is adequate whole-time officers be appointed, that in other districts part-time officers.

Letter from Chelsea and Fulham Division.—A letter was read from the Chelsea and Fulham Division.

Unqualified Practice.—A letter was read from the Public Health Department re unqualified practice: its increase and effect on the public. It was answered at length.

Nominations for Central Council.—Drs. Garstang, Larkin, Macfie, and Taylor were unanimously nominated by the Division for the Central Council.

Vote of Thanks.—A vote of thanks was passed to Dr. Brown for presiding.

ROCHDALE DIVISION.

THE annual meeting was held in the Wellington Hotel, Rochdale, on Thursday, April 22nd. In the absence of the Chairman and Vice-Chairman, Dr. THORP (Todmorden) was voted to the chair.

Confirmation of Minutes.—The minutes of last annual meeting were read and confirmed.

Election of Officers.—The following officers were unanimously elected for the ensuing year: *Chairman*, Dr. Thorp (Todmorden); *Vice-Chairman*, Dr. Menzies (Rochdale); *Secretary*, James Melvin (Rochdale); *Representative on Branch Council*, Dr. Brown (Bacup).

Executive Committee.—It was moved by the SECRETARY, and seconded by Dr. BROWN:

That the following, along with the officers, form the Executive Committee: Drs. Dickson, Kerr, Walker, and Wallace (all of Rochdale).

Annual Report.—The SECRETARY read the annual report as follows: Meeting on December 31st, 1907, 48; increase, none; losses through resignation and change of address, 3; nett membership on December 31st, 1908, 45. The balance sheet showed a balance to the good of £6 7s. 2d.

Lynn Thomas and Skyrme Fund.—A donation of two guineas was voted to the Lynn Thomas and Skyrme Fund. It was moved and seconded:

That the members be asked to subscribe a shilling to liquidate this donation.

Instruction to Representative at Representative Meeting.—Dr. WALKER moved, Dr. BROWN seconded, and it was carried unanimously:

That it be an instruction to the Representative at the Representative Meeting to bring forward the following resolution: That there be two grades of subscription, one as at present to include membership of Association and JOURNAL, and one—say at 10s. 6d. annually—to include membership of Association and the SUPPLEMENT of the JOURNAL only.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.

A MEETING was held (conjointly with the Walthamstow Division) at Brooke House, Clapton (by the kind invitation of Dr. J. O. Adams and Mr. G. H. Johnston), on Thursday, April 22nd, at 8.30 p.m. Dr. GOODALL presided, and there were 23 members and visitors present.

Demonstration of Skin Diseases.—A demonstration of skin diseases by Dr. J. H. SEQUEIRA was held. The following interesting cases were shown, amongst others: (1) A case of recurring whitlows and blisters of the hands and wrists, in a woman. Thought to be due to some trophic changes. (2) A case of lichen planus, with marked pigmentation of the sites of the spots, due to arsenical treatment. (3) A case of lupus erythematosus, much improved by increasing doses of quinine internally and decolorized tincture of iodine externally. (4) A case of syphilis of the nose and lips, in which some doubt in the diagnosis was cleared up by means of Wassermann's test. (5) A case of extensive lupus of face, successfully treated by x rays, in which the appearance of the patient had been much improved by a plastic operation. A hearty vote of thanks was accorded to Dr. Sequeira at the conclusion of the demonstration, and to Dr. Adams and Mr. Johnston for their hospitality.

General Meeting.

A general meeting of the Division then followed.

Confirmation of Minutes.—The minutes of the previous general and clinical meetings were taken as read, and signed by the Chairman.

Letter from Fulham and Chelsea Division.—A letter was read from the Fulham and Chelsea Division re the action of the College of Surgeons re the admission of women, and a reply was sent that this Division did not consider that it was within its province to discuss the matter.

Proposed Federated Societies' Medical Provident Fund.—A letter was read from the Medical Secretary re the proposed Federated Societies' Medical Provident Fund.

Annual General Meeting of Division.—It was agreed that the annual meeting of the Division be held on May 20th instead of May 27th, as the latter date clashed with the Branch Council meeting.

Entertainment Fund.—It was unanimously agreed that an "entertainment fund" for the Division be formed by an annual subscription of 1s. per member per annum.

Medical Certificates of Suitability for Hospital Treatment.—The meeting instructed their Representative to support the recommendation "that a medical certificate of

suitability for hospital treatment be required as a condition of hospital treatment, except in case of casualties."

Contributions to Hospitals by Employers and Employees.—A reply was also sent to the Secretary of the Hospitals Committee saying that this Division agreed with the recommendations of the Representative Meeting re contributions to hospitals by employers of labour and employees, and also re the formation of fresh public medical institutions.

Letter to Mr. H. E. Powell.—A letter was to be sent to Mr. H. E. Powell regretting that he was leaving the Division and wishing him success in his new sphere of labour.

The meeting then terminated.

WALTHAMSTOW DIVISION.

An ordinary meeting of the Division was held at the residence of the Chairman (The Hollies, Wanstead) on Tuesday, March 2nd, at 4 p.m. Eight members and two visitors were present. Dr. HICKMAN presided.

Confirmation of Minutes.—The minutes of the two previous meetings were read and confirmed.

Paper.—The CHAIRMAN then introduced Dr. T. G. STEVENS, who read an instructive paper on Dysmenorrhœa. A discussion followed, in which Drs. WARNER, WARD, HARFORD, MACGREGOR, HICKMAN, and ELDERED took part. Dr. STEVENS replied to the questions.

Vote of Thanks.—A vote of thanks to Dr. T. G. Stevens was proposed by Dr. HARFORD and seconded by Dr. HICKMAN. This was unanimously accorded.

Medical Inspection of Schools.—The consideration of the medical inspection of school children was postponed until next meeting.

An ordinary meeting of the Division was held at the Walthamstow Hospital on Tuesday, April 6th, at 4 p.m. Eight members and one visitor were present. In the absence of the Chairman and Vice-Chairman, Dr. C. J. HORNER was voted to the chair.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Letter from Chelsea and Fulham Division.—A letter from the Chelsea and Fulham Division was read and considered. The Secretary was instructed to forward the reply of this Division.

Letter from Medico-Political Committee.—A letter from the Medico-Political Committee was read and postponed for further consideration at the business meeting.

Medical Inspection of School Children.—The medical inspection of school children was then dealt with, and the secretary instructed to forward the views of this Division to the Medical Secretary.

Papers and Cases.—Dr. HOLTHUSEN read a paper on 4 cases of gunshot wounds, the result of the Tottenham anarchist outrage, admitted on January 23rd to the Walthamstow Hospital. Three of the cases were shown, together with the bullet extracted from one of the injured. The paper was much appreciated by all present. The meeting then terminated.

WALTHAMSTOW AND STRATFORD DIVISIONS.

A CONJOINT meeting with the Stratford Division was held on December 1st, 1908, at the Grove Hall, Wanstead, at 4 p.m. Thirteen members and two visitors were present. Dr. HICKMAN presided.

Paper.—The CHAIRMAN introduced the lecturer in a few well-chosen words, and Mr. McADAM ECCLES proceeded to read a most interesting paper, entitled, *The Non-operative Treatment of Inguinal Hernia*. For over an hour, in the most able manner, Mr. Eccles spoke on the use and abuse of trusses, illustrating his paper with about forty lantern slides, which indicated very clearly the points he wished to emphasize. At the conclusion of the paper questions were asked by Drs. HICKMAN, ROSE, WARD, ELDERED, HORNER and MACGREGOR, to which suitable replies were given.

Vote of Thanks.—A vote of thanks to Mr. Eccles was proposed by Dr. ROSE (Stratford Division), and seconded by Dr. MACGREGOR. This was accorded with acclamation. Mr. ECCLES thanked those present in appropriate terms, and the meeting ended.

LIVERPOOL AND BIRKENHEAD COMBINED DIVISIONS.

The following documents have been sent to us by the Honorary Secretary of the Liverpool and Birkenhead Combined Divisions for publication:

March 24th, 1909.

Dear Sir,

The Report of the Medico-Political Committee on certain points arising in connexion with the medical inspection of school children and the treatment of those found defective has been carefully considered, first by the Joint Committee of the Liverpool and Birkenhead Divisions, and then by two general meetings of the Liverpool and Birkenhead Combined Divisions, and I am instructed to inform you:

1. That the Report was generally approved, and to send you the following commentary and answers to questions.
2. Many points have been noted for future guidance, especially Paragraphs 1 and 2.

3. As regards Paragraph 3 (iii b), the Divisions were unable to pass an opinion on the Hertfordshire and Derbyshire schemes on account of insufficient information as to how they work out in practice.

4. There are no special systems of payment of school medical officers (inspectors) in our area.

5. A complete list of the appointments made in this district, with salaries, is added as an appendix.

It appears to the Divisions that—

6. Parliament having assumed almost parental responsibility for the health and education of the children, it cannot logically avoid providing for its cost. If the parents do not feed the children, the community now is obliged to do so, and the cost must be met by voluntary subscription or by the imposition of a rate. Similarly, if the children have physical defects or diseases, these must, if possible, be remedied, and the cost of the treatment, if not defrayed by the parents, must likewise be borne by the community.

The Combined Divisions agree with the classification of the children into the three groups: (9) Children in Class 1 should be compelled to go for treatment to a private doctor. Children in Class 2 are already provided for by the Poor Law. Children in Class 3 belong to parents who cannot afford to pay for adequate treatment, but whose position is such that public opinion will not allow them to be compelled to seek the aid of the Poor Law.

The Combined Divisions do not think sufficient consideration has been given to the differentiation of these classes, and believe that without great vigilance on the part of the profession Class 3 will be found in time to have entirely, or almost entirely, absorbed the other two classes.

If good and cheap or free attendance can be got by Class 3, the parents of Class 1 will, unless prevented, gradually avail themselves of it in increasing numbers.

The interests of the parish doctors, who are mostly paid fixed salaries, will, it is thought, tend to make Class 2 as small as possible.

It seems to the Divisions urgently necessary that the Medico-Political Committee should indicate the machinery whereby this classification could be carried out and enforced in practice. The Divisions believe that the questions of cost and convenience are the only ones that can be relied upon to appeal to the authorities, and suggest that the Education Authority should therefore have powers similar to those which it is understood are already possessed by Poor Law guardians and health authorities to recover from the parents or guardians of children the whole or part of the cost of their attendance, including medical fees, in all cases where those responsible can afford it and have neglected to provide it, and in the case of Class 2 they should be allowed similarly to recover from the guardians.

The medical fees so recovered should be the ordinary medical fees of the district, and should be paid to the medical officer with, in the case of an officer paid by time or salary, such deduction as may be agreed upon for the time so taken up, and in the case of an officer paid a fee per head, with the deduction of that fee.

7. The Divisions consider, with regard to No. 10, that from the professional point of view the reference of the children to a doctor of the parents' choosing is the most

satisfactory arrangement, but where the attendance is undertaken on a certificate from the medical school officer, the education authority should be responsible to the practitioner for a standard fee, unless the parents voluntarily pay him. The authority would have power to recover as stated above.

8. The Divisions endorse in the strongest way they can the views of the Medico-Political Committee in Paragraph 13 regarding treatment at hospitals, etc. The profession should set its face absolutely against any such arrangement.

If made without payments to the staff the hospital ceases to be a charity and becomes a medical aid, a commercial undertaking, running a business in opposition to legitimate practice.

If the staff is paid they cease to be "honorary" medical officers, but become holders of positions of emolument, and would have to be considered as such.

9. As regards Paragraph 14, the Divisions note that the Board of Education (Memorandum 596, 7a) intends to compel the local education authority to use hospitals as much as it can. They must, therefore, use them unless the profession prevents it. The Combined Divisions are determined to present a united face against this encroachment. It is thought that the establishment of school clinics is not necessary in this locality, but, as they have already been established in many districts, and in connexion with some schools under the Defective and Epileptic Children's Act even in our own area, the Divisions strongly urge all members carefully to watch developments and to be prepared for united action if professional interests become endangered.

ANSWERS TO QUESTIONS.

Inspection.

(a) The Divisions, while generally disapproving of contract work, and believing that the best way of paying a professional man is by a proper fee per case for work actually done, consider that in most of this area payment per case would not be practical, and therefore favour payment of a fixed salary in accordance with the principles already laid down by the Association.

(b), (c), and (d). The answer to (a) being in the negative, no answer is required.

*Treatment.*2 and 3.—*Size of the School Clinic.*

The Divisions have no data on which to give an answer, but will carefully watch developments.

Selection of Staff.

The most probable development in our city areas will be, in the event of clinics being formed, that the authority will appoint whole-time officers. In the rural areas it is thought that clinics are not likely to be established, and if any special arrangements are made it will be on the lines of "recognized surgeries."

Remuneration.

The Divisions are of opinion that in the town areas the most practical method would be as stated above, by the appointment of full-time medical officers, and that their payment should be on a scale at least equal to that of inspectors.

In our suburban areas the officers will probably be part-time officers, and should be remunerated on at least the same scale as part-time inspectors.

In our rural areas it is thought the amount of work will be small, and payment per case would be the best method, and the people should choose their own attendant.

In all areas where operations have to be performed or specialists called in, special arrangements, approved by the Joint Committee and by the Divisions concerned, should be made.

Faithfully yours,

(Signed), K. GROSSMANN,
Honorary Secretary, Liverpool and Birkenhead
Combined Divisions (70, Rodney Street, Liverpool)

The Chairman,
Medico-Political Committee,
British Medical Association.

70, Rodney Street,
Liverpool,
March 24th, 1909.

Dear Sir,

I am instructed by the Joint Committee of the Liverpool and Birkenhead Divisions to reply to your letter of November 27th, 1908, asking on behalf of the Central Ethical Committee for help in constructing a definition of the term "hospital."

The letter was considered by the Joint Committee, and then brought before a meeting of the combined Liverpool and Birkenhead Divisions, and the decision came to was unanimous. At both meetings the Liverpool Western Division was well represented, but so far the Division itself has not met to consider the matter. Since the formation of the Joint Committee and the combined meetings, it is found to be exceedingly difficult to get separate Divisional meetings.

In the first place the Joint Committee wishes to assure the Central Ethical Committee of its desire to help it in every way in its power, and hopes the Central Ethical Committee will not consider its action obstructive.

If the Joint Committee knew the exact reasons and for what purposes the Central Ethical Committee desired to make such a definition, it is possible that it might be able to help, but with the information before it it can only adhere to its already expressed view, and inform the Central Ethical Committee that the meeting of the combined Divisions called among other things for the purpose of considering the matter unanimously adhered to its opinion that the proposed definition is useless, inadequate, and dangerous.

In support of this position, I am instructed to make the following remarks on the memorandum published on the subject, and circulated to Divisions last year.¹

The Memorandum first states that the definition is made in the public interest with the authority of the British Medical Association, but it goes on to say the definition must be considered as a purely domestic definition to guide members and Committees of the Association.

The Joint Committee and the Divisions think that any definition made by the British Medical Association cannot remain entirely domestic, but will become known to persons outside the Association, both medical and lay, and will be used by them against the profession and the Association whenever it suits them to do so.

The Joint Committee and the Divisions are persuaded that the greatest problem before the profession to-day is the problem of hospital abuse and the tyranny of lay committees and the subordination of the medical staffs, and that while the lay committees are getting greater and greater control they are actually ceasing largely to be the actual people who subscribe the money that supports the hospital. They are largely irresponsible manipulators of funds obtained from various sources—endowments, funds like the King's Hospital, Saturday and Sunday collections, street collections, collecting boxes in public places, benefit performances, football matches, contributions from patients, etc., and now there is a decided tendency to make actual contracts with public and private bodies to do work at a price. This latter method of getting money the recent memorandum of the Board of Education suggests to all hospitals. It is therefore necessary, in our opinion, that the greatest care should be exercised in stating anything that may even suggest that the Association considers that lay committees have any rights connected with hospitals that medical men have not without them, or that lay committees in conjunction with medical men can do anything which individual medical men cannot do. It should be driven home to medical men that they will be held responsible for improper acts of the lay committees of the hospitals to which they are attached. Such pronouncement would enormously strengthen the hands of the staffs of hospitals.

The Joint Committee is not informed as to the exact way in which improper use has been made of the term "hospital," but it holds that, whatever it may be, the

making of an authoritative definition will not remove the abuse as long as a synonym remains in the English language.

In the North the term "infirmary" is more commonly used than "hospital," and if both these are condemned, those who have improperly used them will put up "institution for the treatment of" so and so, or will use the word "clinic," which is rapidly coming into the popular vocabulary.

But supposing all terms are included at last, and the gentleman who runs the hospital to advertise himself, finds he must comply with the definition, there is not much difficulty in the way.

He complies with (a) in the following manner:

He takes in and attends all sorts, and makes every one of them pay sufficient to more than cover expenses, and he only refuses to see those people who are likely to go and see him privately and pay him good fees. During the course of the year, though, he takes good care to take in and carefully record all about two necessitous persons. He gets two friends or relatives to partially support his hospital by giving each a guinea or, indeed, each a shilling a year.

(b) These two friends act with him as a committee and control the hospital and appoint the staff.

(c) Will be complied with if he can show he does not pocket any money himself, for he can say that the patients his reputation brings him is exactly the same way as the patients that come to the physicians and surgeons of other "hospitals."

It would be a calamity for any definition such as the one proposed to go out to the public.

What the Central Ethical Committee, in conjunction with the Hospitals Committee, should do is to insist that all institutions for the treatment of disease should be divided into the charitable and the non-charitable, and should set its face against their being mixed up.

The non-charitable may be supported by public or private funds, or by the payments of patients, and the medical men connected with them must be paid.

The charitable institutions should receive only necessitous patients, and be maintained wholly (not wholly or partially) by charitable contributions.

No charitable contribution should be deemed charitable if accompanied by conditions of the nature of a contract.

There are in large towns few hospitals whose committees are appointed by and responsible to those who provide the funds. An increasingly large part of the funds is derived from (1) endowments and funds the actual providers of which are dead, or at any rate have no voice in their management; (2) collections made in the streets, churches, works, etc., or by collecting boxes; (3) contributions of patients. Of the remaining subscribers we hold there is not the least doubt a large number subscribe for a direct return. Railway companies, large works, and employers of labour subscribe to hospitals to avoid the necessity and expense of otherwise providing for those injured in their employ.

We hold that if the present definition is accepted it will appear to acknowledge principles that the Association should use all its powers to oppose: that if used logically it would take the name "hospital" from almost every large hospital that at present exists.

We urge that the Central Ethical Committee cannot proceed by definition to remove the abuses it desires to attack, and its only way is to deal with the acts of people individually.

If any definition is demanded it should be on the lines that no hospital, infirmary, or similar institution should be recognized unless it is approved by the Divisions in which it is situated, always giving it the right of appeal to higher tribunals of the Association in the usual way.

Yours faithfully,

(Signed) K. GROSSMANN,
Honorary Secretary,
Liverpool and Birkenhead Combined Divisions.

For the Central Ethical Committee.
To the Medical Secretary.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

ABERDEEN BRANCH.—*Election of Representative of the Branch on the Council of the Association.*—Nominations of candidates must be sent in writing on or before May 22nd to Dr. J. F. Christie, 7, Alfred Place, Aberdeen.

BATH AND BRISTOL BRANCH.—*Election of Representatives of the Branch upon the Central Council.*—Nominations of candidates for election to the Central Council must be forwarded to the Honorary Secretaries not later than May 8th. The Branch is entitled to elect one member.—**NEWMAN NIELD**, Richmond Hill, Clifton; **W. M. BEAUMONT**, 4, Gay Street, Bath.

BIRMINGHAM BRANCH.—*Election of Representatives of the Branch on the Council of the Association.*—Nominations of candidates must be sent in writing on or before May 19th next to Albert Lucas, F.R.C.S., Branch Secretary, 9, Easy Row, Birmingham. The Branch is entitled to elect two members.—**ALBERT LUCAS**, Honorary Secretary.

BORDER COUNTIES BRANCH.—The next meeting of this Branch will be held at the Lochmaben Combination Hospital for Infectious Diseases, Lochmaben, on Friday, May 21st. Opportunities will also be given to members to inspect the Lochmaben Sewage Works and the Lockerbie Sewage Works. The meeting will be preceded by a meeting of Council, at which the Council's nominees for office in the Branch for the ensuing year will be chosen. Further details will be sent to each member by post, and will convey information as to trains, motors, etc. A good attendance is specially requested.—**FRANCIS R. HILL**, Honorary Secretary, Carlisle.

DUNDEE, PERTH, AND STIRLING BRANCHES.—*Election of Representative Member of Central Council.*—Nominations, in accordance with the regulations of the Association, must be sent to me on or before Saturday, May 22nd.—**R. C. BUIST**, M.D., 166, Nethergate, Dundee, Returning Officer.

EAST ANGLIAN BRANCH.—The annual meeting of the Branch will be held at the Grand Hotel, Clacton-on-Sea, on Thursday, July 1st.—**B. H. NICHOLSON**, East Lodge, Colchester, Honorary Secretary.

EAST ANGLIAN BRANCH.—Nominations for the election of Representative Members of Central Council must be forwarded to me not later than June 1st next.—**B. H. NICHOLSON**, East Lodge, Colchester, Honorary Secretary.

GLASGOW AND WEST OF SCOTLAND BRANCH.—*Election of Members of the Central Council.*—In accordance with Association By-law 25, Branch Rule 5, nominations for Representatives on the Central Council, each signed by at least three electors, are requested to be sent to me on or before Wednesday, May 26th. The Branch is entitled to return two Representatives. The present Representatives, Mr. James Grant Andrew and Dr. D. J. Mackintosh, M.V.O., are eligible, and seek re-election.—**WM. D. MACFARLANE**, Jun., 17, Woodside Crescent, Honorary Secretary.

LANCASHIRE AND CHESHIRE BRANCH.—*Election of Representatives of the Branch on the Council of the Association.*—Nominations of candidates must be sent in writing on or before May 8th next to **F. CHARLES LARKIN**, Branch Secretary, 54, Rodney Street, Liverpool.

LANCASHIRE AND CHESHIRE BRANCH.—A general meeting of the Branch will be held on Wednesday, May 12th, at the New Manchester Royal Infirmary (by kind invitation of the Committee and Medical Board). Details will be published later.—**F. CHARLES LARKIN**, Branch Secretary.

LANCASHIRE AND CHESHIRE BRANCH: WARRINGTON DIVISION.—The annual meeting of this Division will be held at the Infirmary, Warrington, on Tuesday, May 11th, at 4.30 p.m.—**T. A. MURRAY**, Honorary Secretary.

METROPOLITAN COUNTIES BRANCH.—*Nominations of Branch Officers.*—Pursuant to By-law 25, notice is hereby given that nominations for all the officers of the Branch—namely, President-elect, Vice-Presidents, Secretary members of the Branch on the Central Council of the Association—must be sent in to the Honorary Secretary of the Branch on or before May 29th. Voting papers will be sent out on or before June 5th, and must be returned to the Secretary on or before June 12th.—**ATWOOD THORNE**, E. W. GOODALL, Honorary Secretaries.

METROPOLITAN COUNTIES BRANCH: RICHMOND DIVISION.—The annual meeting will be held at the Royal Hospital, Richmond, on Wednesday, May 12th, at 8.30 p.m. Business: Election of officers, Executive Committee's report, Balance-sheet for 1908. Matters referred to the Division.—**G. CARDNO STILL**, Honorary Secretary, Twickenham.

MIDLAND BRANCH.—The annual meeting of this Branch will be held at the Leicester Infirmary on Thursday, June 10th. (1) The President-elect, Dr. R. Pratt, will give an address. (2) Election of Branch officers. (3) Annual report of the Branch. (4) Any other business. In accordance with the By-laws, notice is hereby given that nominations for the election of two Representatives of this Branch on the Central Council must be sent to the Honorary Secretary of the Branch not later than May 24th.—**ROBERT SEVESTRE**, Honorary Secretary, London Road, Leicester.

MIDLAND BRANCH: LINCOLN DIVISION.—The annual meeting of this Division will be held in the Guildhall, Lincoln, on Thursday, May 20th, at 3.30 p.m. Agenda: (a) To elect a Vice-President of the Midland Branch. (b) To elect officers, the Representative on the Branch Council, and the ordinary members of the Executive Committee. (c) To elect the Representative in Representative Meetings of the Association. (d) To consider the advisability or otherwise of the earlier appointment of the Representative in Representative Meetings. (e) To deal with certain matters referred by the Hospitals and Medico-Political Committees to the Divisions—namely: (1) Report on medical certification of suitability of patients for hospital treatment; (2) report on contributions to hospitals by employers of labour and employers; (3) statement as to fresh medical institutions; (4) statement as to sanatoriums for workers suffering from tuberculosis. (f) To answer certain questions relating to the medical inspection of school children and the treatment of those found defective. (g) To reply to the question: Should health officers give their whole time to the work? (see SUPPLEMENT TO BRITISH MEDICAL JOURNAL, January 23rd). (h) Other business. Members desiring to read papers or show cases or specimens are asked to communicate with the Honorary Secretary, **J. S. CHATER**, Honorary Secretary, 10, Steep Hill, Lincoln.

NORTHERN COUNTIES OF SCOTLAND BRANCH.—*Election of Representative of the Branch on the Central Council of the Association.*—Nominations of candidates for election to the Central Council must be forwarded to the Honorary Secretary on or before May 29th.—**J. MUNRO MOIR**, M.D., 4, Ardross Terrace, Inverness, Honorary Secretary.

SOUTH-EASTERN BRANCH.—The annual meeting of this Branch will be held at Crovdon on Wednesday, June 23rd, Dr. J. J. Macan, President-elect, in the chair. The following will be the agenda:—(a) To elect the officers of the Branch—nominations by three members for the offices of President-elect, Vice-Presidents, and Secretary, may be sent to the Honorary Secretary on or before May 21st. (2) To receive the annual report of the Branch. (3) To transact any business that may be transacted by an ordinary meeting. Three members to represent the Branch on the Central Council will also be elected by voting papers. Nominations for these three members in writing should be sent to the Honorary Secretary on or before May 21st.—**H. M. STEWART**, Honorary Secretary, Dulwich.

SOUTH-EASTERN BRANCH: MAIDSTONE DIVISION.—A meeting of this Division will be held at the West Kent General Hospital on Thursday, May 13th, at 3 o'clock prompt. Business: Minutes of last meeting. Cases will be shown by Mr. Travers, Dr. Ryan, and others. Dr. Peyton will read a paper on Menière's disease and show a case of same. Dr. Joyce will move: "That this meeting is of opinion that it should be considered disgraceful conduct in a professional sense for any registered practitioner to supplant another who has been compelled to vacate any appointment on the ground that it is inadequately paid for. Where such a statement of unremuneration has been found by the Medical Council to be well founded, an investigation should take place." Dr. Parr-Dudley will move: "That the letter of warning issued by the Maidstone Division to the head masters of schools in this Division with reference to medical practice shall be issued by this Division to the head masters of schools in Kent."—**G. POTTS**, F.R.C.S. Edin., Honorary Secretary, Kent County Ophthalmic Hospital, Maidstone.

SOUTH MIDLAND BRANCH.—In accordance with By-law 25, notice is hereby given that nominations for the election of a Representative of this Branch on the Central Council must be sent to me not later than May 22nd next.—**E. HARRIS-JONES**, 16, Castilian Street, Northampton.

SOUTH WALES AND MONMOUTHSHIRE BRANCH.—*Election of Two Representatives on the Central Council of the Association.*—In accordance with By-law 25 of the Association, nomination of candidates must be sent to me in writing on or before Saturday, May 22nd next.—**ALFRED HANSON**, Swansea, Honorary Secretary, South Wales and Monmouthshire Branch.

SOUTH-WESTERN BRANCH.—*Election to Central Council.*—This Branch is entitled to return two members. Nominations should be sent to the undersigned so as to reach him not later than May 24th.—**RUSSELL COOMBE**, Branch Secretary, 5, Barnfield Crescent, Exeter.

STAFFORDSHIRE AND SHROPSHIRE AND MID-WALES BRANCHES.
—Nominations for the office of Representative on the Central Council of the Association should be sent to the undersigned on or before Saturday, May 15th, in accordance with By-law 25.—
G. PETGRAVE JOHNSON, Honorary Secretary, Staffordshire Branch, Brook Street, Stoke-on-Trent. C. G. RUSS WOOD, Honorary Secretary, Shropshire and Mid-Wales Branch, Shrewsbury.

ULSTER BRANCH.—The spring meeting of this Branch will be held in Londonderry on Saturday, May 8th.—CECIL SHAW, Honorary Secretary, 29, University Square, Belfast.

British Medical Association.

GRANTS AND SCHOLARSHIPS FOR SCIENTIFIC RESEARCH.

GRANTS.

THE Council of the British Medical Association is prepared to receive applications from members of the Medical Profession for Grants in aid of Researches for the Advancement of Medicine and the Allied Sciences.

The Grants are made subject to the following conditions:

1. That the work of the Grantee shall be subject to inspection by the Science Committee of the Association.

2. That each Grantee shall furnish to the Science Committee, on or before May 15th following the allotment of the grant, a report 'or, if the object of the grant be not then attained, an interim report, to be renewed not later than the same date in each subsequent year until the final report is presented) containing:

(a) A statement, in a form satisfactory to the Science Committee, of the results arrived at, or the stage which the inquiry has reached;

(b) A statement of expenditure incurred, accompanied by vouchers as far as possible;

(c) A reference to any Transactions, Journals, or other publications in which the results of the research have been announced.

SCHOLARSHIPS.

The Council of the British Medical Association is also prepared to receive applications for Research Scholarships, as follows:

1. An ERNEST HART MEMORIAL SCHOLARSHIP, of the value of £200 per annum, for the study of some subject in the department of State Medicine.

2. THREE RESEARCH SCHOLARSHIPS, each of the value of £150 per annum, for research in Anatomy, Physiology, Pathology, Bacteriology, State Medicine, Clinical Medicine, or Clinical Surgery.

Each Scholarship is tenable for one year, but is renewable by the Council, provided that the whole period of tenure shall not exceed three years.

The Scholarships are awarded subject to the following conditions:

1. That the work of the Scholar shall be subject to inspection by the Science Committee of the Association.

2. That he shall furnish the Science Committee, on or before May 15th following the grant of the Scholarship, with a statement of the work done by him.

3. That he sign an undertaking to abide by the above and other regulations affecting Scholarships, a copy of which will be supplied to him.

Applications.

Applications for Grants and Scholarships for the year 1909-10 must be made, not later than May 27th, 1909, in the prescribed form, a copy of which will be supplied on application to the Medical Secretary, 429, Strand, London, W.C.

Each application should be accompanied by a recommendation from the head of the laboratory in which the applicant proposes to work, setting out the fitness of the candidate to conduct such work and the probable value of the work to be undertaken. This is not intended, however, to prevent applications for Grants in aid of work which need not be performed in a recognized laboratory.

J. SMITH WHITAKER, Medical Secretary.

429, Strand, W.C., March, 1909.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

FLYING SURGEON A. F. HARPER has been appointed to the *Torpischoer*, May 3rd.

TERRITORIAL FORCE.

ROYAL FIELD ARTILLERY.

SECOND LIEUTENANT P. J. S. BIRD, M.D., 2nd Hampshire Battery 1st Wessex Brigade, to be Lieutenant March 30th, 1909.

ROYAL ARMY MEDICAL CORPS.

First London (City of London) Field Ambulance.—Lieutenant R. OLLERRENSHAW resigns his commission, March 4th, 1909.

Sixth London Field Ambulance.—WALTER B. PARKSON to be Lieutenant, March 16th, 1909.

Third Northampton Field Ambulance.—ABRAM C. BARBER, M.B., to be Lieutenant, March 17th, 1909; MERVYN A. ARCHDALE, M.B., to be Lieutenant, March 24th, 1909.

Third West Riding Field Ambulance.—Lieutenant H. G. M. HENRY resigns his commission, March 31st, 1909.

Second Wessex Field Ambulance.—Lieutenant F. C. WHITMORE to be Captain, March 3rd, 1909.

Second London (City of London) General Hospital.—Captain (Honorary Captain in the Army) E. J. G. BEEKLEY to be Major, April 5th, 1909.

For Attachment to Units other than Medical Units.—Surgeon-Major C. L. FRASER, from the Unattached List, to be Major, February 21st, 1909; CLARENCE I. ELLIS, M.D., to be Lieutenant, March 30th, 1909.

Vital Statistics.

ENGLISH URBAN MORTALITY IN THE FIRST QUARTER OF 1909.

SPECIALLY REPORTED FOR THE BRITISH MEDICAL JOURNAL.

In the accompanying table will be found summarized the vital statistics for seventy-six of the largest English towns, based upon the Registrar-General's weekly returns for the first quarter of the year. The 109,285 births recorded in these towns in the first quarter of the year were equal to an annual rate of 26.7 per 1,000 of the population, estimated at 16,445,281 persons in the middle of the year; in the corresponding quarters of the three preceding years the rates were 26.7, 26.0, and 26.2 respectively. In London the birth-rate in the first quarter was equal to 25.3 per 1,000, while it averaged 27.2 in the seventy-five other large towns, and ranged from 14.5 in Hastings, 14.6 in Hornsey, 15.5 in Bournemouth, 16.1 in Halifax, 18.5 in Bradford, and 19.3 in Northampton, to 35.7 in St. Helens, 34.2 in Tynemouth, 34.3 in Newport (Mon.) and in Swansea, 34.8 in Wigan, 36.0 in Merthyr Tydfil, and 41.5 in Rhondda.

The 75,580 deaths registered in these towns last quarter were equal to an annual rate of 18.7 per 1,000, the same rate in the three preceding first quarters having been 16.5, 19.0, and 17.9. The death rate in London last quarter was equal to 19.0 per 1,000, while among the seventy-five other large towns it averaged 18.6, and ranged from 10.2 in Hornsey, 11.1 in Walthamstow, 12.6 in East Ham, 12.7 in Harnsworth (Staffs.), 13.3 in Gateshead, and 13.4 in Harrow-in-Furness, 22 in Oldham, 22.2 in Manchester, 23.1 in Bury, 23.2 in Liverpool, 24.2 in Wigan, and 25.9 in St. Helens.

The deaths in the seventy-six towns last quarter included 7,149 which were referred to the principal infectious diseases; of these, 7 resulted from small-pox, 3,743 from measles, 566 from scarlet fever, 838 from diphtheria, 1,215 from whooping-cough, 299 from "fever" (principally enteric), and 529 from diarrhoea. These 7,149 deaths were equal to an annual rate of 1.74 per 1,000; the death-rates from the same diseases in the three preceding first quarters having been 1.38, 1.46, and 1.37. The death-rate in London last quarter from these principal infectious diseases was 1.72 per 1,000; in the seventy-five other towns the rate averaged 1.75, and ranged from 0.18 in Hastings, 0.21 in Hornsey and in Burton-on-Trent, 0.31 in Harrow-in-Furness, 0.41 in Newport (Mon.), and 0.45 in Northampton, to 3.56 in Sneathwell, 3.47 in Middlesbrough, 3.55 in Birmingham, 3.77 in Aston Manor, 4.23 in West Hartlepool, 6.17 in Warrington, and 8.22 in St. Helens.

The 3,743 deaths from measles were equal to an annual rate of 0.91 per 1,000; in London the death-rate from this disease was equal to 0.95, while it averaged 0.90 in the seventy-five other towns, and was highest in Birmingham, 1.24 in Stockport, 1.29 in Aston Manor, 1.30 in Warrington, 1.31 in Sheffield, 1.32 in Middlesbrough, 1.33 in West Hartlepool, and 1.34 in Sunderland. The 566 deaths from scarlet fever corresponded to a rate of 0.12 per 1,000; in London the mortality from this cause was 0.09 per 1,000, while the mean rate was 0.14 in the seventy-five other towns, among which this disease was proportionally most fatal in King's Norton, Liverpool, Bootle, St. Helens, Warrington, Manchester, Salford, Blackburn, and Merthyr Tydfil. The 858 fatal cases of diphtheria were equal to an annual rate of 0.21 per 1,000; in London the death-rate was 0.20, while this disease was 0.19 per 1,000, while among the seventy-five other large towns it averaged 0.22, and was highest in Brighton, Hailey, Derby, Stockport, St. Helens, Warrington, Salford, Rotherham, and Tynemouth. The 1,215 deaths from whooping-cough corresponded to a rate of 0.30 per 1,000; in London also the rate was 0.30; among the seventy-five other large towns the greatest proportional mortality from this disease was recorded in West Ham, Great Yarmouth, Wolverhampton, Nottingham, St. Helens, Wigan, and Bournemouth, Tynemouth, and Swansea. The 529 deaths referred to "fever" were equal to an annual rate of 0.07 per 1,000; in London the "fever" death-rate was 0.05 per 1,000, while it averaged 0.08 in the seventy-five other large towns, and was highest in Hailey, Grimsby, Warrington, Manchester, Salford, Bury, and Oldham. The 521 fatal cases of diarrhoea corresponded to a rate of 0.13 per 1,000; in London the rate was 0.14, while it averaged 0.12 in the seventy-five other towns, among which this disease was proportionally most fatal in Bournemouth, Sneathwell, Wallasey, Hurley, York, Middlesbrough, and Tynemouth. Of the 7 deaths from small-pox in these towns last quarter, 6 belonged to Bristol and 1 to London.

Infant mortality, measured by the proportion of deaths among children under 1 year of age to registered births, was equal to 123 per 1,000 last quarter, against 128, 136, and 124 in the corresponding period of the three preceding years. In London the rate of infant mortality in the quarter under notice was 112 per 1,000, while the rate in the seventy-five other large towns averaged 127, and ranged from 72 in

Barnrow-in-Furness, 74 in Handsworth (Staffs.), 75 in Hornsey, 77 in Hastings, 80 in Wallasey and 88 in Bootle, to 158 in Swansea, 160 in Blackburn, 163 in Burnley, 167 in Nottingham, 170 in St. Helens, and 181 in Wigan.

The causes of 708, or 0.9 per cent., of the deaths registered in the seventy-six towns last quarter were not certified either by a registered medical practitioner or by a coroner. All the causes of death were duly certified in Hornsey, Tottenham, West Ham, Leyton, Walthamstow, Brighton, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Derby, Birkenhead, Wigan, and York; among the other towns the proportion of uncertified deaths ranged upwards to 3.1 in King's Norton, 2.9 in South Shields, 3.5 in Liverpool, 3.4 in Bootle, 3.5 in Birmingham, 3.6 in West Bromwich, and 6.2 in Gateshead.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 8,423 births and 4,569 deaths were registered during the week ending Saturday last, May 1st. The annual rate of mortality in these towns, which had been 17.0, 17.1, and 15.8 per 1,000 in the three preceding weeks, further declined to 14.5 per 1,000 in the week under notice. The rates in the several towns ranged from 7.6 in Leyton and in Walthamstow, 7.7 in Burton-on-Trent, 7.8 in York, and 8.2 in Hornsey, and in Handsworth (Staffs.) to 19.6 in Oldham and in Tynemouth, 19.7 in Hanley, 19.8 in Wallasey, 20.2 in Preston, 20.6 in Sunderland, 23.3 in Middlesbrough, 24.9 in Bootle, and 25.0 in Glasgow. The rate of mortality was 14.0 per 1,000, while it averaged 14.7 in the seventy-five other large towns. The death-rate from the principal infectious diseases averaged 1.5 per 1,000 in the seventy-six large towns; in London the death-rate from these diseases was 1.7 per 1,000, while among the seventy-five other large towns it ranged upwards to 3.0 in Sunderland and in Glasgow, 3.3 in West Hartlepool, 3.5 in Stockport and in Middlesbrough, 3.7 in Wallasey, 3.8 in Bootle, 4.0 in Wigan, and 4.4 in Preston. Measles caused a death-rate of 1.5 in Wolverhampton, in Handsworth (Staffs.) in Birmingham, and in Stockport, 1.6 in St. Helens, 1.7 in Sealford, 1.9 in Tynemouth, 2.3 in Bootle, 2.9 in Wigan, and 3.3 in West Hartlepool; diphtheria of 1.5 in Wallasey and in Burnley; whooping-cough of 1.1 in Hornsey, 1.2 in Wigan, 1.3 in South Shields, 1.4 in East Ham, 1.5 in Southwick, 2.0 in Stockport, and 3.5 in Preston; "fever of 1.5 in Wallasey; and diarrhoea of 1.1 in St. Helens. The mortality from scarlet fever showed no marked excess in any of the large towns. One fatal case of small-pox was registered in Cardiff, but none in any other of the seventy-six large towns. The number of scarlet fever patients under treatment in the Metropolitan Asylum Hospitals and the London Fever Hospital, which had been 2,418, 2,294, and 2,219 at the end of the three preceding weeks, had further fallen to 2,181 at the end of last week; 305 new cases were admitted during the week, against 256, 244, and 265 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

During the week ending Saturday last, May 1st, 1,023 births and 605 deaths were registered in eight of the principal Scottish towns. The annual rate of mortality in these towns, which had been 18.4 and 17.4 per 1,000 in the two preceding weeks, further declined to last week to 16.9, but was 2.4 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scottish towns the death-rates ranged from 13.0 in Greenock and 14.8 in Dundee and in Paisley to 17.2 in Edinburgh and 18.2 in Glasgow. The death-rate from the principal infectious diseases averaged 2.6 per 1,000 in these towns, the highest rates being recorded in Glasgow and Paisley. The 303 deaths registered in Glasgow included 5 which were referred to scarlet fever, 4 to diphtheria, 24 to whooping-cough, 2 to enteric fever, 2 to cerebro-spinal meningitis, and 8 to diarrhoea. Eleven deaths from whooping-cough and 5 from diarrhoea were recorded in Edinburgh; 3 from whooping-cough in Dundee, in Aberdeen, and in Paisley; and 3 from diarrhoea in Aberdeen, and 2 each in Dundee and in Leith.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, May 1st, 612 births and 452 deaths were registered in the twenty-two principal urban districts of Ireland, as against 729 births and 524 deaths in the preceding period. The annual death-rate in these districts, which had been 15.5, and 15.5, and 15.9 per 1,000 in the three preceding weeks, fell to 20.6 per 1,000 in the week under notice, this figure being 6.1 per 1,000 higher than the mean annual death-rate in the seventy-six English towns for the corresponding period. The figures in Dublin and Belfast were 22.0 and 19.0 respectively, those in other districts ranging from 9.9 in Kilkenny and 5.7 in Newtownards to 3.9 in Clonmel and 47.6 in Tralee, while Cork stood at 21.9, Londonderry at 18.1, Limerick at 24.6, and Waterford at 15.6. The zymotic death-rate in the twenty-two districts averaged 1.4 per 1,000, as against 1.3 per 1,000 in the preceding period.

Hospitals and Asylums.

MOSELEY HALL CONVALESCENT HOSPITAL FOR CHILDREN.

THE annual report for 1908 shows that during the year 954 children were admitted, as compared with 893 in 1907. Of the children admitted, 468 were recommended by subscribers, 235 were transferred from the Birmingham Children's Hospital, and 251 from the General, the Queen's, the Orthopaedic, and other hospitals and charities in the city. The income was £2,261, and the expenditure £2,497, leaving a deficiency of £236 for the year, and an accumulated deficiency of £1,665.

SOUTH WIMBLEDON, MERTON, AND DISTRICT COTTAGE HOSPITAL.

THE ninth annual report, recently issued, states that, though the income and expenditure account showed only a slight deficit, this would have been more serious had the large total of patients treated in 1907 been maintained. For the first time since 1904 there had been a decrease in the number of cases treated. During the year 1908 231 in-patients had been treated, against 267 the previous year; 175 operations under anaesthetics were performed, and the results of the treatment generally were as follows: Patients in hospital on January 1, 1908, 6; admitted during the year, 231; discharged cured, 200; discharged relieved

and improved, 8; discharged in *statu quo*, 3; discharged incurable, 2; removed to infirmaries, 2; removed to the National Hospital for Epilepsy and Paralysis, 1; left against advice, 2; died, 12; remaining in hospital on December 31st, 1908, 7. Since the hospital opened in May, 1900, 1,639 patients had been admitted. The number of hospital days was 2,607, an average of 11 days' stay in hospital per patient against 2.911 days and the same average per patient in 1907. The report expresses gratitude to the Hospital Sunday Fund and the Hospital Saturday Fund for the grants received, the amounts being £61 l. 8s. 1d. and £27 l. 8s. respectively. The income and expenditure account showed that the ordinary income for the year was £664 5s. 11d., and the excess of expenditure over income was £3 16s. 10d.

INGHAM INFIRMARY, SOUTH SHIELDS.

THE thirty-sixth annual report of the Ingham Infirmary and South Shields and Westoe Dispensary shows that the year 1908 ended with a balance of some £300 on the wrong side. It was a year of trade depression, and subscriptions from workshops, on which the institution largely depends, fell off. Little, however, can be gathered from the financial statements, which are not rendered on any recognized system. In-patient work increased somewhat, but the out-patient department showed a decrease in attendance. A return made of the attendances at meetings of members of the Managing Committee reveals a notable percentage of absences.

Vacancies and Appointments.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column, advertisements must be received not later than the first post on Wednesday morning.

VACANCIES.

- BETHNAL GREEN INFIRMARY.—Assistant Medical Officer. Salary, £100 per annum.
BIRMINGHAM GENERAL DISPENSARY.—Resident Surgeon. Salary, £170 per annum.
BIRKENHEAD UNION.—Male Resident Assistant Medical Officer for the Infirmary and Sanatorium. Salary, £120 per annum.

DIARY FOR THE WEEK.

MONDAY.

MEDICAL SOCIETY OF LONDON. 11, Chandos Street, Cavendish Square, W., 8.30 p.m.—Papers: (1) Mr. J. D. Malcolm: The Pathology of Shock; (2) Mr. T. H. Malcolm: The Association of Appendicitis and Pyosalpinx.

TUESDAY.

ROYAL SOCIETY OF MEDICINE:

SURGICAL SECTION. 20, Hanover Square, W., 5.30 p.m.—Papers:—(1) Mr. J. Hutchingson: Autolysis and Reinfection of Syphilis; (2) Mr. Herbert J. Paterson: Jejunum and Gastro-jejunal Ulcer following Gastro-enterostomy, with notes of two cases, in one of which Gastric Analyses were made before and after Operation for Jejunum Ulcer: with an Abstract of fifty-nine recorded cases and Observations thereon.

WEDNESDAY.

ROYAL SANITARY INSTITUTE. Margaret Street, W., 8 p.m.—Discussion: The Passage of Excreta through House Drains.

UNITED SERVICES MEDICAL SOCIETY. Royal Army Medical College, Millbank, S.W., 8.30 p.m.—Paper:—Major H. W. Gratton and Captain D. O. Hyde, R.A.M.C.: Some Points on the Standardization of Typhoid Vaccine.

THURSDAY.

HARVEIAN SOCIETY. Stafford Rooms, Titchborne Street, Edeboro Road, W., 8.30 p.m.—Papers:—(1) Dr. H. G. Macveoy: Paroxysmal Pulmonary Oedema in Bright's Disease; (2) Dr. B. H. Spilbury: Some Practical Points in Clinical Bacteriology.

ROYAL SOCIETY OF MEDICINE:

OBSTETRICAL AND Gynaecological SECTION. 20, Hanover Square, W., 7.45 p.m.—(1) Papers:—(a) Dr. T. W. Eden: The Operative Treatment of Rupture of the Uterus; (b) Dr. Lionel Smith: The Treatment of Rupture of the Uterus. (2) Cases and Specimens.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:

CLINICAL SECTION. 20, Hanover Square, W.—8 p.m. Exhibition of Cases. Dr. F. Spicer: Paralysis of Spinal Accessory Nerve. Mr. W. G. Spencer: Reduction of an old Subcoracoid Dislocation of the Shoulder, Complicated by Fracture of Humerus, by Excavating the Glenoid Cavity. Dr. Finzi: (1) Inoperable Recurrent Carcinoma of Mammary Treated by Radium; (2) Epithelioma of Lip and Trepan by the Trepan; (3) Arthritis of the Knee Treated by Lithium Iodine Ionization. Mr. V. Warren Lou: Pneumococcal Cystitis and Arthritis. Mr. Sidney Boyd: A Patient with Sprengel's Deformity of the Shoulder and Hirschsprung's Disease (Definite Rectal Obstruction). Dr. McNalty: Aortic Aneurysm (?) in a Boy. Dr. Parkes Weber: Woman Three Years after Oophorectomy and Drainage for Chronic Pelvic Inflammation Complicated with Hepatic Cirrhosis. Dr. F. de Havilland Hall and Mr. W. G. Spencer: Splenectomy for Splenic Anaemia. 9 p.m., Demonstration by Dr. F. Stacey Wilson of the Anatomy of the Uterus by the use of the New Dissection. 9.45 p.m., Paper: Dr. Poynton and Mr. Trotter: A Case of Cardioidosis.

POST-GRADUATE COURSES AND LECTURES.

CENTRAL LONDON THROAT AND EAR HOSPITAL. Gray's Inn Road, W.C.—Lectures: Tuesday, 3.45 p.m., Pharynx, Nasopharynx; Friday, 3.45 p.m., External Ear.
HOSPITAL FOR SICK CHILDREN. Great Ormond Street W.C.—Thursday, 4 p.m., Selected Surgical Cases.

LONDON SCHOOL OF CLINICAL MEDICINE. Seamen's Hospital, Greenwich.—Daily attendance: Out-patient, Demonstration, 10 a.m.; Medical and Surgical Clinics, 2.15 p.m. and 3.15 p.m. respectively; Operations, 2 p.m. Special Clinics: Ear and Throat, at noon and 4 p.m., Monday, and noon, Thursday; Skin, at noon and 4 p.m., Thursday and noon, Friday; Eye, 11 a.m., Wednesday and Saturday; Radiography, 4 p.m., Thursday. Special Lectures: Monday, Tenuous Recovery from Illnesses; Thursday, The Moral Factor in Relation to the Treatment and Growth of Disease.

MEDICAL GRADUATES' COLLEGE AND POLYCLINIC. 22, Chancery Street, W.C.—The following clinical demonstrations have been arranged for next week at 4 p.m. each day: Monday, Skin. Tuesday, Medical. Wednesday, Surgical. Thursday, Surgical. Friday, Ear, Nose, and Throat. Lectures at 5.15 p.m. each day will be given as follows: Monday, Treatment of Neurasthenia. Tuesday, The Diagnosis and Treatment of Malignant Disease of the Bladder. Wednesday, The Scope and Purpose of the British Pharmacopoeia. Thursday, The Treatment of Chronic Heart Disease, especially by Mechanical Methods.

NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC. Queen Square, W.C.—Tuesday, 3.30 p.m., Acute Polyneuritis and Landry's Paralysis. Friday, 3.30 p.m., Aphasia.

NORTH-EAST LONDON POST-GRADUATE COLLEGE. Prince of Wales's General Hospital, Tottenham.—Monday, Clinics, 10 a.m., Surgical Out-patient, 2.30 p.m., Medical Out-patient: Nose, Throat, and Ear; X Rays, 4.30 p.m., Medical In-patient. Tuesday, Clinics, 10 a.m., Medical Out-patient; 2.30 p.m., Operation; Clinics: Surgical Out-patient, Gynaecological. Wednesday, Clinics, 2.30 p.m., Medical Out-patient, Skin and Eye. Thursday, 2.30 p.m., Gynaecological Operations; Clinics: Medical Out-patient; Surgical Out-patient; X Rays, 5 p.m., Medical In-patient; 4.30 p.m., Lecture, on Ligatures, and Sutures. Friday, Clinics, 10 a.m., Surgical Out-patient; 2.30 p.m., Operations; Clinics: Medical Out-patient, Eye; 5 p.m., Patient.

POST-GRADUATE COLLEGE. West London Hospital, Hammer Smith, London, W.—The following are the arrangements for next week: Daily, 2 p.m., Medical and Surgical Clinics, X Rays; 2.30 p.m., Operations. Monday and Thursday and Wednesday 2 p.m., Diseases of the Eye (start at 10 a.m.). Tuesday and Friday, 10 a.m., Gynaecological Operations; 2 p.m. (and Wednesday and Saturday 10 a.m.), Diseases of Throat, Nose, and Ear; 2.30 p.m., Diseases of Skin. Wednesday and Saturday, 10 a.m., Diseases of Children; 2.30 p.m., Diseases of Women. Lectures: At 10 a.m., Monday and Thursday, Demonstration by Surgical Registrar, Friday, Demonstration by Medical Registrar. At 12 noon, Monday, Pathological Demonstration; at 12.15 p.m., Practical Medicine. At 5 p.m., Monday and Thursday, Diseases of Throat, Nose, and Ear. Tuesday, Gynaecological Cases. Wednesday, Medicine. Friday, Plague.

BOOKS, ETC., RECEIVED.

Die Krankheiten der Leber, der Gallenwege und der Pfortader auf Grund eigener Beobachtungen. Bearbeitet von Prof. Dr. P. K. Pel. Haarlem: De Erven F. Rohn; und Jena: G. Fischer, 1909. M. 8.

ANNUAL MEETING, BRITISH MEDICAL ASSOCIATION, BELFAST, 1909.

THE Seventy-seventh Annual Meeting of the British Medical Association will be held at Belfast from July 23rd, to July 31st, 1909, under the Presidency of Sir William Whitla.

The Annual Representative Meeting commences in Belfast on July 23rd. The Presidential Address will be delivered on July 27th. The Sections will meet on July 28th, 29th, and 30th.

A preliminary programme of arrangements was published in the SUPPLEMENT of May 1st, p. 197. The Honorary Local Secretaries are: Henry Lawrence McKisack, M.D., M.R.C.P., 17, University Square, Belfast; and Cecil Edward Shaw, M.A., M.D., M.Ch., 29, University Square, Belfast; and Howard Stevenson, B.A., M.B., F.R.C.S.I., 2, College Square North, Belfast.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

THE British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the BRITISH MEDICAL JOURNAL is supplied weekly, post free, to every member of the British Medical Association, wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follows:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every

Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three Members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the BRITISH MEDICAL JOURNAL for non-members is £1 8s. 0d. for the United Kingdom, and £1 15s. 0d. for abroad.

SPECIAL NOTICE TO MEMBERS.

Every member is requested to preserve this "Supplement," which contains matters specially referred to Divisions, until the subjects have been discussed by the Division to which he belongs. BY ORDER.

British Medical Association.

MATTERS REFERRED TO DIVISIONS.

MEDICO-POLITICAL COMMITTEE.

REPORT TO THE DIVISIONS ON MEDICAL INSPECTION OF SCHOOL CHILDREN, AND TREATMENT OF THOSE FOUND DEFECTIVE, BASED UPON CONSIDERATION OF THE REPLIES OF DIVISIONS TO THE REPORT OF THE COMMITTEE, ISSUED ON DECEMBER 22ND, 1908.

For convenience, the Recommendations, upon which the Divisions are asked to instruct their Representatives, are collected at the commencement of the Report.

RECOMMENDATIONS.

Employment of Medical Inspectors of School Children under the guise of Assistant Medical Officers of Health.

Recommendation A.

That the duties of the office of Assistant Medical Officer of Health, and the general arrangements, should be such as would enable the holder to base a claim for an appointment elsewhere as Medical Officer of Health upon the experience gained in this appointment.

It would appear, *prima facie*, that one condition of this should be that he should be the officer, not merely of the Education Committee, but also of the Sanitary Committee of the Corporation.

Systems of Payment of School Medical Officers.

Recommendation B.

That the Representative Meeting approve the system of payment by fixed salary, or, in the case of part-time officers, payment for time devoted to the work.

Recommendation C.

That special systems of capitation payment, such as those adopted in Hertfordshire and Derbyshire, are satisfactory in sparsely populated districts.

Recommendation D.

That the system of payment per child examined should be opposed by the profession. If for any special reasons it is adopted in any district, the fee should be not less than 2s. 6d. per head.

Recommendation E.

That, if it be found desirable to appoint a class of School Medical Officer having supervising as well as inspecting duties, a rate of salary should be fixed above the minimum adopted by the Association for Officers engaged in Inspection only.

Duties of School Nurse in connection with Inspection and Treatment.

Recommendation F.

That, in inspection, the duty of the Nurse should be simply to assist the School Medical Officer.

Recommendation G.

That, in treatment, she should act under the instruction and supervision of the practitioner in charge of the patient and should, as far as possible, receive written instructions from him.

Recommendation H.

That the duties of the Nurse should be defined in written rules including the foregoing provisions.

*Treatment of School Children found Defective.**Recommendation I.*

That the Association should oppose the reference of school children found, upon medical inspection, to be defective to public medical charities for treatment.

Recommendation J.

That there is no objection to treatment by provident dispensaries or other contract practice organisations provided the remuneration of the practitioner is adequate for the work done, and that effect is given to the principles of the Contract Practice Report of the Association.

Recommendation K.

That the Association should oppose any scheme of provision for the treatment of school children found, upon medical inspection, to be defective which rests on the reference of such children to the Poor Law, pending such reforms as may result from the consideration of the Reports of the Royal Commission.

Recommendation L.

That, under existing conditions, the most satisfactory provision for the treatment of school children found, upon medical inspection, to be defective whose parents cannot afford to pay for such treatment, is by placing them under the care of private practitioners, who should be adequately remunerated out of public funds without intervention from the Poor Law.

Recommendation M.

That, in sparsely populated districts, such provision should be made by the "recognition" of the surgeries of private practitioners as places at which treatment may be obtained at the public expense.

Recommendation N.

That, in towns, the work should be similarly entrusted to private practitioners discharging their duties at convenient centres (designated "school clinics") situated in Schools or in independent buildings.

REPORT.

GENERAL STATEMENT BY MR. G. H. G. (INTRODUCTORY.)

1. The Medico-Political Committee has considered the replies of the Divisions to the questions submitted with the Report on Medical Inspection of School Children in December last (see Appendix A, page 254), and the comments of the Divisions on the Report. Guided by these indications of the present feelings of the Divisions upon the important questions arising in connection with the Medical Inspection of School Children and the Treatment of those found defective, the Committee has been enabled to prepare more definite conclusions and recommendations, which are now submitted by the Council to the Divisions with a view to pronouncement by the Annual Representative Meeting at Belfast, on behalf of the Association.

2. In addition to the questions appended to the Report issued in December for the purpose of eliciting expressions of the opinion of the Divisions, questions were also submitted to the Honorary Secretaries of Divisions on questions of fact. A Summary of the opinions of the Divisions as stated in their replies is contained in Appendix B to this Report. Analyses of the information obtained as to the method in which Medical Inspection and Treatment of School Children are at present being carried on will be found in Appendix C. The information contained in these Appendices is derived from replies of Divisions received up to and including Thursday, April 15th, 1909. The number of Divisions replying to some or all of the questions was 102, out of a possible 157.

INSPECTION OF SCHOOL CHILDREN.

CONCLUSIONS AND RECOMMENDATIONS.

3. In the Report of December, 1908, questions were dealt with affecting Medical Inspection of School Children, upon which there had been no previous pronouncement by the Association. These were as follows:—

Employment of Medical Inspectors of School Children under the guise of Assistant Medical Officers of Health.

4. The Committee recommends that the expression of opinion of the Public Health Committee stated in the former Report should be formally approved by the Representative Meeting:

"That the duties of the office and the general arrangements should be such as would enable the holder to have a claim for an appointment elsewhere as Medical Officer of Health upon the experience gained in this appointment.

It would appear, *prima facie*, that one condition of this should be that he should be the officer, not merely of the Education Committee, but also of the Sanitary Committee of the Corporation."

Systems of Payment for Medical Inspection.

5. The replies of the Divisions, stated in the Appendix, show a definite preference for the system of payment by time (which includes payment by fixed salary), rather than payment per head.

6. The system of payment per head, especially payment solely for the number of children examined, is objectionable as tending to hurry the actual work of inspection, as excluding general school hygiene from the work of the School Medical Officer, and as making no allowance for the time spent in travelling, clerical work, and other duties recognised to appertain to the office. Modified systems of capitation payment such as those adopted in Hertfordshire and Derbyshire, which make due allowance, have been found satisfactory in Rural Districts.

RECOMMENDATIONS.

7. The Committee recommends:

- (i.) That the Representative Meeting approve the system of payment by fixed salary, or, in the case of part-time officers, payment for time devoted to the work.
- (ii.) That special systems of capitation payment such as those adopted in Hertfordshire and Derbyshire are satisfactory in sparsely populated districts (see Appendix A, page 250).
- (iii.) That the system of payment per child examined should be opposed by the profession. If for any special reasons it is adopted in any district, the fee should be not less than 2s. 6d. per head.
- (iv.) That, if it be found desirable to appoint a class of School Medical Officer having supervising as well as inspecting duties, a rate of salary should be fixed above the minimum adopted by the Association for Officers engaged in Inspection only.

DUTIES OF SCHOOL NURSE IN REGARD TO THE INSPECTION AND TREATMENT.

8. The information furnished by Divisions shows that the system of employment of School Nurses has not yet been extensively adopted.

9. In the future development of the system it will be necessary for the Divisions to watch that the limits laid down by the Board of Education are not exceeded. (Circular No. 576, paragraph 8:—"It is essential, however, that the teacher, school nurse, or health visitor assisting in the administration of this Act, should act strictly under the instruction and supervision of medical authority.")

RECOMMENDATIONS.

Inspection.

10. (a) In the department of Inspection the duty of the nurse is simply that of assisting the School Medical Officer.

Treatment.

(b) In assisting in the treatment of children found defective the School Nurse must act under the instruction and supervision of the practitioner in charge of the patient, and should as far as possible receive written instructions from him.

(c) That the duties of the nurse should be defined in written Rules including the foregoing provisions:

TREATMENT OF SCHOOL CHILDREN FOUND
DEFECTIVE.*Matters requiring further consideration.*

11. The replies of the Divisions on the treatment of School children found defective, and especially the references to School Clinics, indicate the great difficulty which the Divisions have felt in dealing with problems as to which the previous experience of the profession affords so little guidance. A study of the reports of Division meetings which have appeared in the *BRITISH MEDICAL JOURNAL* also makes clear the difficulty which members of the Association have found in appreciating all the bearings of the subject, and the misconceptions which in the opinion of the Committee have consequently arisen. It appears to the Committee desirable, therefore, to enter into greater detail than in the previous Report as to certain matters which demand at the present juncture the serious attention of the profession.

Extent of provision necessary.

12. In order that a clear view of the subject may be attained, it is first necessary to form the most accurate estimate possible of the extent of the provision which public educational authorities will probably find themselves compelled to make within the next few years for the treatment of children found defective.

13. It would appear that the indications given by the Medico-Political Committee in its previous Reports on this subject have been to a considerable extent overlooked, and that many members of the profession have formed an exaggerated idea of the treatment which will be provided under arrangements made by local education authorities. It can be deduced from the evidence obtained that the chief defects, which have very largely escaped treatment, for which in future treatment will have to be provided are as follows:—

(1) Defective teeth, (2) visual defects, particularly errors of refraction, (3) ear diseases, specially chronic otitis media, (4) nasal obstructions, etc., (5) parasitic skin diseases, specially ringworm.

14. The public is beginning to recognise that not only the interests of the children themselves and motives of humanity demand that these defects should be properly treated, but also the interests of the community in general.

Reasons of past inattention.

15. The reasons for which these defects have to a great extent escaped treatment would seem to be—

(a) Parental ignorance and apathy. In the past such defects have been to a great extent overlooked by parents. If observed, their importance has not been recognised, and they have in a large number of cases not received adequate treatment.

(b) The treatment of such defects cannot be paid for by the majority of parents of those children who attend public elementary schools, at a rate which is remunerative to the private practitioner for the time and care necessary for a cure.

(c) There is no satisfactory organised State medical assistance available for many of those who are unable to pay for adequate treatment. Hospitals supported by voluntary contributions cannot afford the great drain on their resources which would be necessary to cope with the thorough treatment of such cases, even if it were desirable that such work should be undertaken by charity.

(d) There has in the past been no system in existence by which parents and guardians could be compelled either to obtain private treatment, or to apply to some State provided institution if unable to pay for it. The Children Act, 1908, now gives this power.*

16. As affecting ratepayers and taxpayers, it must be borne in mind, that the nation as well as the individual will reap the benefit of the improvement resulting from the effective treatment of such defects. The proper treatment

of defective teeth alone will prolong into advanced life the usefulness of many persons who now break down in middle life through gastric and other disorders due to defective nutrition. The benefits resulting from, and the dangers averted by, the proper treatment of ocular defects and nasal disease in children do not need emphasizing in a Report addressed to medical practitioners.

New Work for the Medical Profession.

17. This analysis of the nature of the cases, for the treatment of which provision should be made by the education authorities, has an important bearing upon the question as affecting the interests of private medical practitioners. Many of the statements that have been made appear to indicate a fear that work which hitherto has been done, or which could be done, by private practitioners is to be transferred to public officials. But, as the Committee has pointed out, one of the chief reasons for which public provision must now be made is that the work has not been done in the past by private practitioners. In other words, the greater part of the work now under consideration will be new work for the medical profession. It is not a case of making some new provision for that which has already been done, but of considering how new work shall be provided for consistently with the principle already laid down by the Association, namely, that the case must in the first instance be referred, if suitable, to the private medical practitioner.

Varieties of Arrangement Proposed.

18. The British Medical Association, on behalf of the profession, has now to consider what kind of arrangements for meeting this new demand for medical work will be at once most efficient from the public point of view, and most equitable as regards the medical profession. The various arrangements discussed in the replies of the Divisions may be grouped under four heads: (a) Reference of children to public charities such as hospitals, supported by voluntary contributions; (b) reference to provident dispensaries and other contract practice organisations; (c) reference of children in the first instance to the private medical attendant of the family for treatment at the parents' expense, and failing such treatment to the Poor Law Medical Officers; (d) reference to private practitioners, or to special officers, paid in either case out of public funds, otherwise than through the Poor Law Authorities.

(a) Treatment by Public Charities.

19. The Medico-Political Committee is unable to understand the reasons for which medical practitioners should advise the treatment of the children in question by public charities. As affecting the public there is abundant evidence that the hospitals are not equipped to cope with the work, and many have refused to do it. From the professional point of view the arrangement is open to the objection that it means a great increase of the amount of unpaid work done by the profession, and the Committee cannot realise for what reason any Division of the Association should desire an extension of the gratuitous work of the profession, in preference to arrangements by which medical practitioners would be paid by the community for work done for the community. In the opinion of the Committee the work of Hospitals should be confined to charitable relief.

(b) Treatment by Contract Practice Institutions.

20. To the second system, viz., reference to provident or other contract practice institutions, there can be no objection from the professional point of view provided that the remuneration is adequate, and that other details are suitably arranged. (For example, that appointments be thrown open to all practitioners, resident in the district and the other general principles laid down by the Association as regards Contract Practice given effect to.) The chief question affecting remuneration will be whether the medical officers to such institutions are to carry on the work as part of their ordinary contract, and if so, whether it is the opinion of the Divisions that the rates at present paid for such work afford reasonable remuneration to medical practitioners for the proper treatment of cases for example, of errors of refraction,

* Children Act, 1908, sect. 12 (1), " . . . a parent or other person legally liable to maintain a child or young person shall be deemed to have neglected him in a manner likely to cause injury to his health if he fails to provide adequate food, clothing, medical aid, or lodging for the child or young person, or if, being unable otherwise to provide such food, clothing, medical aid, or lodging, he fails to take steps to procure the same to be provided under the Acts relating to the relief of the poor."

of chronic otorrhoea, or ringworm. From the public point of view the question would be simply one of administration, whether it is more economical for any public funds devoted to the purpose to be expended in payment of other organisations, or for the Education Authority to organise the work itself. As regards the practicability of this system it is to be noted that many districts are without provident dispensaries, and in many others such dispensaries are not adapted to carry out the work in question.

(c) *Treatment under the Poor Law.*

21. The system of employment of private practitioners by the parents, with the alternative of reference to the Poor Law is open to the objection that, as already pointed out, past experience has shown that the majority of the parents of children attending public elementary schools cannot afford to pay such fees as would remunerate medical men for the proper treatment of tedious and prolonged cases.

22. Some Divisions support the procedure, as a means of putting pressure upon parents to provide necessary treatment for their children at their own expense, that children found defective should be excluded from school until treatment is afforded, and that parents should be prosecuted in default of providing treatment.

23. The Committee does not believe that public opinion will consent to the reference for treatment under the Poor Law, as at present organized, of all children, whose parents cannot afford payment. In the former Report of the Medico-Political Committee reference was made to the then expected Report of the Royal Commission on the Poor Law as likely to facilitate the consideration of this part of the subject. The Reports of the Majority and Minority of the Poor Law Commission have now appeared, and though differing considerably as to the nature of the organisation proposed for medical assistance, are agreed in proposing the practical abolition of the present Poor-Law System. Under the scheme formulated by either section of the Commission, the Poor-Law work would be placed under the control of Committees appointed largely or entirely by the County or Borough Councils, who are already the Education Authorities. In the Majority Report it is proposed that there should be a Public Assistance Committee administering a system of medical assistance on Contract Practice lines. In the Minority Report it is proposed that the Health Committee of the County or Borough Council shall administer medical assistance by a staff of whole time salaried officers. In either case the result, as affecting the matter now under consideration, would be in practice that the same local authority would deal with both medical assistance and educational work, and thus the provision for treatment of School Children found defective would form part of the general system of medical assistance of the district, the distinctions of the present Poor-Law System being practically abolished.

24. The Committee considers, therefore, that a serious mistake would be made by the Association at the present juncture if it threw all the weight of its influence in favour of a system of organisation which public opinion does not approve, and which is not practical in its working. The Committee is convinced, for the reasons stated in the Section at the commencement of this Report, that the attempt to cope with the requirements of children found upon medical inspection to be defective, by payment by the parents or in default through the present Poor Law, will fail, and that some kind of provision for such treatment at the public expense, otherwise than through the Poor Law, is inevitable. The Association, by frankly recognising this fundamental condition of the problem, may exercise such an influence on the nature of the arrangements made as will secure equitable treatment of the medical practitioners employed.

(d) *Treatment provided by Local Authority other than through the Poor Law.*

25. The objections offered by the Divisions to arrangements for the treatment of the children in question at the public expense otherwise than through the Poor Law, appear to the Committee to rest, either upon ordinary political considerations, with which the Association has nothing to do, or upon a misconception of the kind of arrangements which the public authorities would be likely to make. For the purpose of removing such misconceptions the Committee sets out in

detail a scheme of arrangements which in its opinion would be practical, economical, and efficient, from the public point of view, and at the same time equitable to the profession.

"Recognised" Surgeries.

26. For simplicity the case of sparsely populated districts is first considered. The machinery, in the opinion of the Committee, should be somewhat as follows:

The local authority will in the first instance "recognise" the surgeries of those medical practitioners of the district who are willing to undertake the work, as places for the treatment, at the public expense, of certain specified defects and diseases such as those referred to at the commencement of this Report.

27. The School Medical Officer having reported that a child suffers from such a defect or disorder, it will be brought to the notice of the parent by means of a form, such as that appended. (See Appendix A, page 252.) It will rest with the parent, in the first instance, to make such provision as he is able and willing to make for the treatment of the child. Failing any such provision by the parent, and assuming that the defect or disease is one of those specified by the Local Authority, the parent will be informed that treatment for the child may be obtained at one of the recognized surgeries, of which a list will be furnished.

School Clinics.

28. In the case of larger centres of population the general principles of the arrangements adopted would be identical with those above stated, though the organisation will naturally be more elaborate according to the size of the district to be served. In a large town it will probably be more economical for the patients to be seen at some recognised centre instead of at the houses of the individual doctors. This centre (designated a "School Clinic") may be simply a room in a school, or an independent building, according to the number of children to be provided for. It will be attended at stated times by those practitioners who are engaged for the work. These may be all the practitioners of the district, or a selected number serving on a rota (*vide infra*), or possibly, in the very largest centres, special officers. In the opinion of the Committee, there is no reason why, except as regards, of course, dental work, and, perhaps, as regards the more difficult eye cases, any others than private general practitioners should be employed.

29. The objection has been raised that if some practitioners are selected for the work, they may thereby acquire special experience and reputation at the expense of others. To obviate this objection, the principle which has been adopted by the London County Council for Medical Inspection is worthy of the consideration of the Divisions, namely, the establishment of a "rota" of practitioners with a limited term of service. In districts in which inspection is being carried out by private practitioners, arrangements might be made whereby each School Medical Officer should serve for a limited term of years, after which he should be eligible to carry out treatment for a limited period.

30. The Committee would take this opportunity of advertising to the previous decision of the Association that the treatment of children found defective should in no case be carried out by the Officers entrusted with the duty of inspection. This principle the Committee considers that the Association should rigidly adhere to. As affecting the profession the combination of both offices in one person is likely, in the opinion of the Committee, to lead to underpayment, and also to lead to throwing the work of treatment into the hands of whole-time officials instead of into those of private practitioners. The Association appears to be in favour, upon the whole, of the work of inspection being carried out by salaried whole-time officers. On the other hand, opinion is clearly in favour of treatment, if undertaken by the Education Authorities, being entrusted to general practitioners, and it will be gathered that in the view of the Committee this would be the most satisfactory arrangement for the purpose. From the public point of view the consideration is also likely to appeal to public authorities, that if the work of inspection and of treatment is carried out by different officers the one will act as, to some extent, a check upon the other.

31. Payment under any of the above schemes would be made on a scale agreed upon between the local profession, as represented by the local Division of the British Medical Association, and the local Education Authority.

32. By such a system the legitimate interests of the private practitioners of the district would be fully protected, and at the same time the public interests, as regards the provision of efficient and economical treatment, properly secured. The Committee being convinced that it is the only plan which will be found in the long run to satisfy all the conditions above stated, trusts that on further consideration it may find favour with the Divisions. If the profession commits itself to opposing the treatment of school children at the public expense except through the Poor Law as at present administered, it will in all probability find, as in so many cases in the past, that arrangements are made in which it has no voice, and in which its interests will be disregarded.

RECOMMENDATIONS AS REGARDS TREATMENT.

Treatment of School Children found Defective.

That the Association should oppose the reference of school children, found, upon medical inspection, to be defective, to public medical charities for treatment.

That there is no objection to treatment by provident dispensaries or other contract-practice organisations provided the remuneration of the practitioner is adequate for the work done, and that effect is given to the principles of the Contract-Practice Report of the Association.

That the Association should oppose any scheme of provision for the treatment of school children, found, upon medical inspection, to be defective, which rests on the reference of such children to the Poor Law, pending such reforms as may result from the consideration of the Reports of the Royal Commission.

That, under existing conditions, the most satisfactory provision for the treatment of school children, found, upon medical inspection, to be defective, whose parents cannot afford to pay for such treatment, is by placing them under the care of private practitioners, who should be adequately remunerated out of public funds without intervention from the Poor Law.

That, in sparsely populated districts, such provision should be made by the "recognition" of the surgeries of private practitioners as places at which treatment may be obtained at the public expense.

That, in towns, the work should be similarly entrusted to private practitioners discharging their duties at convenient centres (designated "school clinics") situated in Schools or in independent buildings.

APPENDIX A.

REPORT

ON CERTAIN POINTS ARISING IN CONNECTION WITH
THE MEDICAL INSPECTION OF SCHOOL CHILDREN
AND THE TREATMENT OF THOSE FOUND DEFECTIVE.

Issued to Secretaries of Divisions, December,
1908, and to Members of the Association
as a Confidential Document.

INTRODUCTORY.

The Annual Representative Meeting, 1908, had before it three reports of the Medico-Political Committee on Medical Inspection of School Children, which had been circulated from time to time to the Divisions, in accordance with the

instructions of the previous Representative Meeting. It had also before it a report on the treatment of school children found, upon examination, to be defective, which was prepared by the Committee, as a matter of urgency, shortly before the Annual Representative Meeting.

The Meeting passed Resolutions dealing with certain points in connection with appointments of medical inspectors of school children and their relation to Medical Officers of Health. It referred the subject of treatment to the Committee for further consideration, and gave instructions for a Memorandum on the whole question to be prepared and sent to the Divisions. The instructions of the Meeting are contained in Minutes 718, 720, 724, 725, 731, and 732 (*See Sub-Appendix "I"*).

The Medico-Political Committee has fully considered these instructions and, in conjunction therewith, an important Memorandum (No. 596, dated 17th August, 1908) issued by the Board of Education immediately after the Annual Representative Meeting. Various points thus arise for the further careful consideration of the Association, and are grouped in this Report under the heads of (i) Medical Inspection, and (ii) Treatment. (*For Section dealing with "Treatment," see p. 251 et seq.*)

I. MEDICAL INSPECTION OF SCHOOL CHILDREN.

PREVIOUS CONSIDERATION.

The Committee thinks it well first to report briefly on the present stage of development of the Medical Inspection of School Children. The Act providing for this came into operation on January 1st, 1908. The Central administration has been provided for by the establishment, as recommended by the British Medical Association, of a Medical Bureau in the Education Department, and the local authorities have appointed or are appointing School Medical Officers and Assistants to carry on the work.

The British Medical Association contributed, through the Medico-Political Committee, to the consideration of the subject by the issue of three Reports appearing in December, 1907, February and May, 1908, respectively.

The first Report (BRITISH MEDICAL JOURNAL, Supplement, December 21st, 1907) dealt with the whole matter as set out in the Memorandum of the Board of Education (No. 576, November 22nd, 1907). The Committee suggested a Schedule for the details of medical inspection, which was subsequently adopted with slight modifications by the Board of Education (Memorandum 582, January 23rd, 1908); the principle was also laid down that the work of inspection should be separated from that of (a) treatment and (b) visitation of the homes of children; concerning the relation of Medical Officers of Health to the work, the opinion was expressed that the duties of actual inspection could not be efficiently discharged by Medical Officers of Health personally, in view of the nature and extent of their existing duties: a pronouncement as to their duties in respect to supervision was deferred.

In the second Report (B.M.J., Supplement, February 8th, 1908), the questions of supervision of medical inspectors of school children, and of the relation of such work to that of the Medical Officer of Health, were specially dealt with. While recognising the obvious desirability of the administrative co-ordination of all Departments of the State Service concerned with public health, the Committee pointed out that at present such co-ordination does not exist in those Central Departments of the Government to which the Medical Officer of Health and the Officer supervising Medical Inspection of School Children* respectively report. Attention was drawn to the necessity, on the one hand, of not interfering with the efficiency of the exceedingly important present work of Medical Officers of Health, and on the other hand, of providing that medical inspection should not be conducted, as might be the case with an officer already overburdened with other work, in a perfunctory manner.

In the third Report (B.M.J., Supplement, May 9th, 1908), the question of terms of appointment of whole-time Medical Inspectors of School Children was dealt with and it was

* This Officer is now officially known and recognised by the Board of Education as the School Medical Officer of a given authority. Those working under him are referred to as his Assistants.

suggested that the minimum salary for junior officers should be from £250 to £300 per annum. The reason given for this opinion was that, from the nature of the work, medical inspectors would not have the same opportunities for gaining experience which would prove of value in their future career as would practitioners holding other junior appointments such as those of house surgeons or of assistants to general practitioners. Attention was also drawn to the principle of the Association that the salaries paid to medical women must not be less than those paid to medical men in respect of the same work. The above salary has been accepted as the standard by the Association, and the Association has been successful in securing the acceptance of it by many local authorities. Difficulties which have arisen are dealt with below, under the heading "*Employment of Medical Inspectors of School Children under the guise of Assistant Medical Officers of Health.*"

1913-1914 Annual Report

NEW QUESTIONS AFFECTING MEDICAL INSPECTION. 191

The new instructions of the Annual Representative Meeting, 1908, on the subject of medical inspection (see Sub-Appendix "I") refer to:—

- (i) The relation of Medical Officers of Health to the work (Minutes 724 and 725);
- (ii) The engagement of Medical Inspectors of Schools under the guise of assistants to Medical Officers of Health (Minute 720); and
- (iii) The system of remuneration for medical inspection by payment per head (Minute 718).

1. Position of Medical Officer of Health in Relation to Medical Inspection of School Children.

The opinion of the Annual Representative Meeting, 1908, that it is undesirable that a full-time Medical Officer of Health should have added to his duties those of medical inspector of school children, confirms the opinions expressed by the Medico-Political Committee in the Reports of December, 1907, and February, 1908, above referred to. It is, therefore, sufficient for the purpose of the present Report to take note and inform the Divisions of this confirmation.

The attention of the Divisions is drawn to the pronouncement by the Annual Representative Meeting, 1908 (Minute 724) that part-time Medical Officers of Health, to whose duties are added those connected with medical inspection of school children, should receive additional remuneration in respect thereof. It will be for the Divisions to take appropriate action accordingly in cases arising in their respective localities.

2. Employment of Medical Inspectors of School Children under the guise of Assistant Medical Officers of Health.

Some local authorities have sought to evade this action of the Association by designating their medical inspectors Assistant Medical Officers of Health, and Minute 720 of the Annual Representative Meeting deals particularly with this abuse. Upon consideration of that Minute the Public Health Committee of the Association, with the approval of the Council, has laid down the following statement of principle as to circumstances in which an appointment of Assistant Medical Officer of Health, whose duties would include Medical Inspection of School Children, could be accepted at a salary lower than the minimum fixed for medical inspectors of school children, namely $\text{£}250$ per annum.

"That the duties of the office and the general arrangements should be such as would enable the holder to base his claim for an appointment elsewhere as Medical Officer of Health upon the experience gained in this appointment."

This would appear, *prima facie*, that one condition of this should be that he should be the Officer, not merely *joint*, of the Education Committee, but also, of the Sanitary Committee of the Corporation.

To give effect to this principle it will be necessary for each appointment to be considered on its merits, and the questions for consideration in each case will be (i) what are the duties of such Assistant Medical Officer of Health apart from

medical inspection of school children, (ii) what will be the value, as affecting the professional prospects of the officer, of the experience gained in the discharge of such duties. It will be for the Divisions, giving due regard to such considerations, to take the appropriate action in individual cases.

3. Systems of Payment.

Upon consideration of Minute 718 of the Annual Representative Meeting, 1908, whereby the Medico-Political Committee was instructed to refer for the consideration of the Divisions the questions of the desirability of the system of payment per head and of the amount of such payments where such a system is adopted, the Committee thinks it desirable to review the various systems of payment found to be at present in operation. These are (i) by fixed salary, (ii) (for part-time officers) by salary based upon time spent in the work, and (iii) various methods of payment per head.

(i) By Fixed Salary.

On the subject of salaries the Association has already approved the suggestions of the Medico-Political Committee, namely, that for a fully experienced and thoroughly competent whole-time School Medical Officer the commencing salary should not be less than £500 per annum, and that for Junior or Assistant School Medical Officers the salary should not be less than £250 per annum. These sums are to be understood as exclusive of travelling expenses, clerical assistance, cost of stationery, postage, etc.

(ii) Salary based upon Time Spent in Work. Part-time Officers.

For part-time Officers the Association has already recommended a system of payment which is in operation in London, namely, that the salary should be based upon the time devoted to the work, and that the minimum should be £50 per annum in respect of each school session of two hours per week.

(iii a) Inclusive Payment per Head.

In some districts the system has been adopted of a simple payment per child inspected, to cover all duties and costs involved in such inspection, and the Divisions are asked to express their opinion, first, as to the desirability of such a system, and, secondly, as to the proposal that the minimum fee in such cases should be 2s. 6d.

(iii b) Special Systems of Capitation Payment, for Part-time Officers.

The Committee has information of systems of capitation payment for part-time officers adopted by certain County Councils, which are as follows:—

In Hertfordshire the whole work is supervised by the County Medical Officer of Health who is also School Medical Officer for the county, and each Assistant School Medical Officer is paid (i) a fee of 1s. 6d. for each child inspected, *plus* (ii) a capitation fee of 2d. per annum on the average number on the school books, *plus* (iii) an allowance (for travelling expenses) of 5s. per term, per school for each school visited outside the town in which the officer inspecting resides.

Another system, adopted by the Derbyshire County Council, is:—

1s. per inspection, *plus* £1 per school, *plus* £1 per 1,000 acres in area covered by the Medical Inspector: each item per annum.

On these various systems of payment the Committee would express the opinion that for whole-time officers payment by salary is essential, and that any system for payment of inspectors must be determined by the following requirements:—(i) of making the formal inspection, (ii) of travelling, and (iii) of extra duties such as making reports and fulfilling the additional requirements of paragraph 7 (a) of the Board of Education Circular, No. 596. That paragraph is as follows:—

"7 (a) Improvement of the School Arrangements.—The School Medical Officer will doubtless furnish the Local Education Authority with valuable advice as to im-

improvements which can be made in the use of old school premises and in the design of new school premises for improving the health of the children educated in them.

For instance, he will note and report to the Authority in cases in which the ventilation of schools is defective, either as regards the means provided or as regards the use and maintenance of those means, and, if necessary, he will supply them with the results of scientific tests. He will, of course, call attention to the physical effects of bad ventilation, such as the prevalence of headaches, lassitude, and debility among the scholars, when they come under his notice. He will observe and report instances of bad positions in sitting and unsuitable design of desks or benches. As regards cases of defective eyesight, he will indicate such measures as can be taken to remedy or mitigate the defects by altering the position of the children in the class, or improving the lighting of the school in amount or direction, and he will call attention to the strain imposed on eyesight by the use of too small type in text books, the teaching of very fine sewing, etc. He will also be able to estimate the effectiveness of lessons on the subject of personal hygiene given in the school, and may be able to suggest improvements in the curriculum or in the methods of giving such lessons, and bringing their importance home to the children. He may also be able to institute comparisons between school and school in respect of the effect of physical exercises, and, in the case of children of weakly physique, he may be able to indicate the kind and amount of physical exercises which are suitable for them. He will observe the effect of holding classes in the open air, and call attention to cases in which the adoption of this arrangement is desirable. He will also be able to suggest to what extent, and in respect of what children, advantage should be taken of the facilities afforded by Article 44 (g) of the Code of 1903 for improving the health and physical condition of the children, by means of open air schools, school camps, etc., and, in cases where facilities exist for baths and swimming, he will sometimes find occasion to recommend a more extensive use of such facilities. And the beneficial influence of the School Medical Officer will not be exhausted even when he has done everything included in this formidable catalogue. The mere fact that the services of a specially skilled officer and staff are devoted to all matters affecting the health of the children in their Public Elementary Schools gives to the whole question of school hygiene a dignity and importance which cannot but produce a considerable effect on the minds of teachers, parents and children alike. From this point of view, the School Medical Officer should be not merely a functionary charged with specific duties, but a pervading influence making, in the long run, for better hygienic conditions in the school and in the home.

With the expressions of opinion of the Divisions' on this part of the subject the Committee will be glad to receive information also as to any special systems of payment adopted in their respective districts.

4. Board of Education Memorandum, No. 596.—Questions of Medical Inspection.

The Committee has considered, as already stated, in connection with its references from the Annual Representative Meeting, 1908, the Memorandum of the Board of Education, No. 596, issued since that Meeting, and certain additional points affecting medical inspection arising out of that Memorandum as are here referred to.

5. Tenure of Office.

In view of the responsibilities of the School Medical Officer, particularly those arising in connection with the duties referred to in paragraph 7 (a) of the Memorandum of the Board of Education, above quoted, the Committee considers it essential that such officers should be appointed without reference to time and subject to a reasonable notice, and that the appointment should not be terminated without the consent of the Board of Education. The experience of the

Association with regard to the position of Medical Officers of Health who are appointed for limited periods shows the necessity for this.

6. Duties of School Medical Officers in connection with the Feeding of School Children.

The Board of Education draws attention in Memorandum No. 596, paragraph 7 (b), to a new question in National Hygiene arising out of the Education (Provision of Meals) Act, 1906. The Board expresses the opinion that medical inspection will "furnish the Local Education Authority with valuable information as to the necessity of exercising their powers under the Education (Provision of Meals) Act, 1906, and as to the best methods and effects of such exercise. It is extremely desirable that the School Medical Officer should be closely associated with this last mentioned work, wherever it is undertaken, though it is of hardly less importance that the methods adopted should be such as will secure the greatest educational effect in respect of the manners and conduct of the children concerned as well as the best physical results."

In view of this provision it may be anticipated that it will be found necessary for the School Medical Officer to be consulted as to all diets adopted and to have supervision of all meals supplied.

7. School Nurses.

Several references are made in Circular 596 to the duties to be discharged by school nurses in connection with inspection or treatment of school children. Questions will arise as to the subordination of the nurse in such work to the School Medical Officers. As governing the whole subject, the Committee would draw attention to the pronouncement of the Board of Education in its first Circular (No. 576, paragraph 8) as follows:—

"It is essential, however, that the teacher, school nurse, or health visitor assisting in the administration of this Act, should act strictly under the instruction and supervision of medical authority."

II. TREATMENT OF CHILDREN FOUND, UPON INSPECTION, TO BE DEFECTIVE.

8. Introductory.

Both the resolutions of the Annual Representative Meeting, 1908, relative to the treatment of children found to be defective, and the portions of the Board of Education Memorandum, No. 596, which deal with this matter, indicate clearly the importance of the questions which require immediate attention.

As was pointed out by the Medico-Political Committee in its Report of July, 1908:—

Par. 4. The recent statutory provision by the Houses of Parliament for the Medical Inspection of School Children was a result of the increasing national recognition of the truth that the health of each individual is a matter profoundly concerning, not only himself and his family, but the general community, and that, as part of this principle, the community is specially interested in and responsible for the protection of the health of the children.

Par. 5. It follows that, unless medical inspection is to remain ineffective, means must be provided whereby those children who, as the result of inspection, are found to be defective, shall receive such medical care as is necessary to remove, as far as possible, their physical defects, and to prepare them for efficient citizenship.

9. Propriety of Treatment at Public Expense.

In considering how provision can best be made for the proper treatment of such defects as may call for attention, the first question is as to how, and to what extent, such provision should be made at the public expense.

The law requires parents to provide necessary treatment for their children. Quite recently, however, the community, recognising its own interest in the welfare of children as distinct from the interest of the parents, has begun to require the treatment of cases hitherto neglected, involving an additional expenditure which parents among the poorer classes could not afford. At the same time it

must be recognised that public opinion would not consent to compel all children whose parents cannot afford to pay, to be treated under the existing Poor Law.

It is possible that as the result of the forthcoming Report of the Royal Commission on the Poor Law the whole question of public provision of medical relief will be fundamentally reconsidered; and it is possible that the provisions of the scheme which follows could be incorporated in the reorganized Poor Law system. As matters stand at present, however, the conclusion of the Committee is that the provision of treatment for school children, found upon medical inspection to be defective, must be considered from the standpoint of means of parents under three heads:—

1. Children whose parents can provide the requisite treatment at their own expense.
2. At the other extreme, children whose parents are in such circumstances that treatment under the existing Poor Law is carried out.
3. Children falling into neither of the foregoing groups.

10. *Treatment at Expense of Parents: Reference to Private Practitioners.*

The Board of Education Memorandum, No. 596, emphasises the importance of provision whereby parents shall be required to pay for the necessary treatment of their children so far as their means permit, and in paragraph 7 (d) the Board states:—

Par. 7 (d). *Advice or Direction to Parents.*—Where medical inspection reveals any defect or malady in a particular child, the first step will naturally be to notify the parents, and, unless the ailment is a minor one which can be removed by home treatment or treatment (under the direction of the School Medical Officer) by the School Nurse, to urge upon the parent the desirability of obtaining treatment by an ordinary medical practitioner. In extreme cases of insanitary homes or conditions, the attention of the Sanitary Authority will, of course, be called to the matter.

For the purpose of such reference it is desirable that a printed form should be adopted, and the following is an example of a convenient form used by certain County Councils:—

"Dear Sir, or Madam.—

The Education (Administrative Provisions) Act, 1907.

Your child has been medically examined, and you are recommended to consult a doctor, or pay special attention to the following matters:—

.....
(The words which do not apply to the case in question are struck out.)

11. *Poor Law Cases.*

It is sufficient for the purpose of this Report to refer to the fact that for cases which can properly be provided for under the Poor Law the necessary public provision already exists.

12. *Treatment at the Public Expense, otherwise than through the Poor Law, or by Charity.*

In the Report of July, 1908, the Committee pointed out that the cases for which provision must be made might be classified, with regard to the physical defects calling for treatment, under three heads:—

- (i) Cases, such as those of mental deficiency and defects of speech, which should be sent to Special Schools;
- (ii) Severe cases requiring confinement to bed which would be treated at home or in hospital;
- (iii) Cases not falling into either of the foregoing groups, which would be treated in School Clinics or recognised surgeries.

The second and third of these groups require further consideration in this Report.

13. *Treatment at Hospitals and other Institutions.*

Before proceeding to discuss the scope and organisation of School Clinics and Recognised Surgeries, *vide infra*, the Committee thinks it well first to discuss an alternative which has already been proposed, for example, at Sheffield, namely

that the Local Authorities shall, in consideration of payments to hospitals and other charitable institutions, be able to claim treatment in such institutions for any children who may be sent thereto.

This important proposal is referred to in the Board of Education Circular 596, paragraph 7 (g), p. 8, as follows:—

Par. (g). *Contributions to Hospitals, Infirmarys, Dispensaries, etc.*—Special attention should be paid to the powers referred to in the proviso to Section 13 (1) of the Act, and the Board consider that, before the direct treatment of ailments is undertaken by the Local Education Authority, whether by means of a School Clinic, or by themselves supplying and paying for medical treatment, full advantage should be taken of the benefits of such institutions. The Board will be prepared to entertain proposals for contributing to the funds of hospitals, dispensaries, and nursing associations, on terms of adequate advantage. Such contributions are specially desirable in the case of Eye Hospitals and Cottage Hospitals which are prepared to undertake minor surgical operations. It is permissible to include among the conditions of contribution a provision allocating a reasonable remuneration to the medical men working for such institutions. Among the Associations to which contributions might properly be made are "children's care associations," who, by means of local sub-committees or local representatives, arrange for the individual treatment of poor school children by voluntary agencies or otherwise.

Such proposals raise for the consideration of the Divisions serious questions of principle, particularly as regards the terms upon which the services of the profession should be given gratuitously to the community.

In an analogous case the Annual Representative Meeting, 1908, has already decided that the services of the profession should not be rendered without charge to patients for whose maintenance and treatment public authorities are responsible.

The ground upon which the services of the honorary staff of a hospital or other charitable institution are given to it is that it is a charity supported by the voluntary contributions of benevolent members of the community. If this charitable basis is abolished, the claim upon the staff to act as honorary officers ceases. If hospitals accept contributions from public funds in consideration of undertaking the treatment of certain patients, then, as regards the treatment of those patients, they cease to be charitable institutions. There is also a grave risk that their legitimate work would be interfered with.

The importance of the questions thus raised extends beyond the immediate issue. If the profession now permits the insidious introduction of arrangements whereby patients, in respect of whom hospitals receive payment from public funds, are to be treated gratuitously by the honorary staff, a very serious form of competition with private practitioners will be instituted under public sanction, and a precedent will be created for ever increasing demands by the community upon the gratuitous work of medical practitioners. At present, the demands made upon the services of medical officers of hospitals are automatically limited by the necessity imposed upon the hospital authorities of meeting incidental expenses by the voluntary contributions of the charitable.

If hospitals are able to draw upon the public purse for these incidental expenses this protection to the profession is destroyed. Though all arrangements made now may be considered to be in some degree of a provisional character, pending the issue and consideration of the Report of the Poor Law Commission, the profession must, in the meantime, prevent the introduction and adoption of arrangements calculated to produce the gravest consequences if permanently adopted.

If, in recognition of the considerations above stated, the principle is accepted that payment is to be made to medical practitioners for treating at charitable institutions children, in respect of whose treatment payment from public funds is received, difficulties will arise as to the selection of the officers to be employed for the purpose.

In view of the foregoing considerations the Medico-Political Committee is of opinion that any attempt by public authorities to arrange for the treatment of school children at hospitals and other charitable institutions is thoroughly

unsound in principle. The Committee recommends that the Divisions should therefore oppose such arrangements.

14. School Clinics and Recognised Surgeries.

The necessity being evident for a definite separation of any public service from the charitable services of hospitals, not only in justice to the hospital patients but also to the medical men who should be separately paid, the nature of the public service should now be considered. The Committee proceeds to consider the alternative provision, namely, School Clinics and Contracts by the State or Municipality with private practitioners, separately or in Public Medical Services.

This subject is referred to in paragraph 7 (h) of the Board of Education Memorandum, No. 596. Before sanctioning the establishment of School Clinics the Board of Education will require from the local authority detailed information on the following points:—

(i) What precautions the Local Education Authority will take to secure that only those children shall be treated in a School Clinic for whose treatment adequate provision cannot otherwise be made, whether by the parents, or by voluntary associations or institutions such as hospitals, or through the agency of the Poor Law;

(ii) What precise diseases and defects will be treated;

(iii) By whom and on what terms and conditions the treatment will be carried out, and what will be its extent;

(iv) What is the estimated cost of the clinic in respect of buildings and equipment, maintenance and administration, and treatment, and how it is proposed to meet this cost, out of the rates or otherwise.

The subject may conveniently be discussed in the present Report, for the assistance of the Divisions, under the headings indicated by the above paragraphs of the Board of Education Memorandum, although some of the points raised are of only indirect interest to the medical profession.

It is clear that the character of the arrangements made must differ widely according to the density of population of the district concerned. The term "School Clinic," in the ordinary accepted sense, can only be applied to the arrangements practicable in the larger centres of population. The modifications necessary to adapt these arrangements to the requirements of less populous districts will be alluded to in a separate paragraph, under the heading *Recognised Surgeries*, after the description of the School Clinic proper.

15. School Clinics.

It will be seen that the matters for consideration may be summarised as: (i) Selection of children for treatment, with regard to means of parents, (ii) Scope of clinic—diseases and defects treated, (iii) Medical Officers—selection and terms of employment, (iv) Buildings, equipment, maintenance and expenditure generally.

(i) Selection of Children for Treatment, with regard to Means of Parents.

The subject of means of parents was sufficiently dealt with by the Medico-Political Committee in its Report of July, 1908, in the following terms (paragraph 10):—

Paragraph 10.—The first question is as to the treatment, at the public expense, of defective children whose parents may be able to pay for such treatment. It must be remembered that the matter under discussion only refers to the children in public Elementary Schools. Under existing provisions, the condition of any child found defective by the Medical Inspector is reported to the parents, who are advised to seek medical treatment. Parents who habitually neglect their children can be proceeded against for such neglect.

If the parents are unable to obtain the necessary treatment elsewhere, then the case may be dealt with at a School Clinic or Surgery. (*Vide also paragraph 7 (d) of the Board of Education Circular, No. 596, quoted on page 252 of this Report.*)

(ii) Scope of Clinic or Recognised Surgery—Diseases and Defects Treated.

The Committee dealt also in the same Report (paragraph 12) with the second question raised by the Board of Education, namely, what precise diseases and defects shall

be treated. Those specified by the Committee included as examples:—(Conditions of the eye—errors of refraction, and simple diseases such as blepharitis, conjunctivitis, etc.; conditions of the ear—chronic discharge, etc.; verminous and parasitic conditions of the skin; examination and treatment of defective teeth by registered dentists. It is, of course, understood that the mentally defective and backward children will be suitably dealt with in the course of medical inspection.

(iii) Medical Officers and Terms of Employment.

The Committee in the same Report (paragraph 11) advised that the work of School Clinics and Recognised Surgeries would best be done by a large number of part-time medical officers, the appointments being open to those practitioners in the district who were prepared to give time to the work. It would be for the local authority to make necessary arrangements, which would be facilitated if the authority received the co-operation and assistance of the local Division of the Association. Where a Public Medical Service existed it would obviously be convenient that a contract should be made between it and the local authority. Where a Public Medical Service has not been formed, the desirability of such an institution will doubtless be considered by the Division.

The terms of remuneration would be a matter for careful consideration, and, in many cases, it would be necessary for the Division concerned to arrive at a decision as to what, in its opinion, would be suitable. As some general guidance from the Association may, however, be found desirable, the Committee would be glad to receive expressions of opinion from the Divisions, upon the basis of which definite suggestions might be framed.

(iv) Buildings, Equipment, Maintenance, and Expenditure generally.

The Association is directly concerned in the fourth paragraph of the Board of Education Memorandum, No. 596, in so far as it affects the remuneration of the profession for treatment, and, indirectly, in so far as the adequacy of the equipment of the institution is affected. The medical profession must in this, as in other matters affecting the medical inspection and treatment of school children, protect the community against the danger of inadequate provisions by local authorities resulting in an inefficiency for which attempts may afterwards be made to hold the School Medical Officers or the profession responsible.

16. Recognised Surgeries.

In adapting the arrangements above suggested to the requirements of rural and other thinly populated districts, the chief modifications will be in respect of staff, buildings, and general equipment. The best arrangement for the treatment of those school children whose parents cannot afford to pay for the necessary treatment may be found in contracts made, after public advertisement, by the local authorities, with such of the local private practitioners as desire it and whose surgeries would be "recognised" as places for the provision of such treatment. The arrangements for this purpose would be of the most simple character, namely, an agreement with the private practitioner or practitioners as to the terms of remuneration, hours of attendance, and similar details, and the arrangements for reference of children to such practitioners and for payment on the production of proper vouchers.

SUB-APPENDIX I.

RESOLUTIONS OF ANNUAL REPRESENTATIVE MEETING, 1908.

Medical Inspection of School Children.

Arising out of consideration of paragraph 32 of Report of the Medico-Political Committee:—

Minute 718.—Proposed: That this Meeting disapproves the principle of payment per head, but that where such a system is adopted the payment be not less than 2s. 6d.

Resolved: That the Medico-Political Committee be instructed to refer the subject to the Divisions.

Minute 729.—That the practice of engaging Medical Inspectors of Schools under the disguise of Assistants to the Medical Officer of Health should be prevented, unless a sufficient remuneration be given, and that it be an instruction to the Council to give effect to this resolution.

Minute 724.—That in those cases where a Medical Officer of Health has to perform the additional duties of Medical Inspector of School Children, he should receive increased remuneration.

That this be held to apply only to part-time appointments.

Minute 725.—That it is undesirable that a full-time Medical Officer of Health should have added to his duties the duties of Medical Inspector of School Children.

Treatment of School Children.

Arising out of consideration of paragraph 33 of Report of Medico-Political Committee.

Minute 731.—That the Supplementary Report of the Medico-Political Committee on provision for treatment of school children found, upon medical examination, to be defective, together with the Motion by the Leicester and Rutland Division, and all other Motions handed in with reference to the treatment of school children, be referred to the Council for consideration and further Report to the Divisions. (*For motions before the Meeting see Sub-Appendix II.*)

Minute 732.—That the matters referred to the Council in the resolution regarding Medical Inspection and Treatment of School Children be considered urgent, and that the Divisions be communicated with upon this subject as soon as possible.

SUB-APPENDIX II.

MOTIONS HANDED IN AT ANNUAL REPRESENTATIVE MEETING, 1908, AS TO MEDICAL TREATMENT OF SCHOOL CHILDREN.

By Dr. E. J. McCann (Westminster):—

That the Westminster Division feels that the logical conclusion of the medical inspection of school children is the provision of treatment, where this is found to be necessary, and that as the machinery of the Poor Law already exists for the medical relief of all persons unable to pay medical fees, the school children should be referred to the Medical Department of the Poor Law, which should be reorganised and extended to meet the demand for the increased medical relief which will arise.

By Dr. Frank M. Pope (Leicester and Rutland):—

That this Meeting, while approving of medical inspection of school children, is strongly opposed to any system of treatment (whether provided from the rates or from the Imperial Exchequer) of those children who may be found defective, and urges the Council to take such steps as would be likely to prevent such a system being adopted.

By Dr. Stanley A. Gill (Southport):—

That school children found defective should be referred for treatment to private practitioners, or in special circumstances for hospital treatment.

By Mr. J. M. Ferguson (Burnley):—

(a) That the actual treatment of physically defective school children should not be undertaken by Medical Inspectors of Schools.

(b) That advice only might be given in cases of parasitical diseases of the skin and scalp:—School

nurses being employed to follow such cases to their homes to see that such advice is made effective.

(c) That in all other diseases or defects the parents should be referred to their own medical attendant who alone should decide what treatment should be given and where it is desirable that such treatment should be given.

(d) Cases, having no medical attendant and being too poor to pay for advice should be referred to the Poor Law Medical officer.

By Dr. A. H. Williams (Watford and Harrow):—

The Medical Inspector reports a child as defective.

The parent is to be notified that the defect is to be attended to, before the child may return to school.

Should the parents be unable to pay for treatment then the Educational Department is to give a voucher for the payment of the fee, on a fixed scale.

The parent may then take his child to any practitioner whom he may select and the practitioner will receive his fee from the Education Department.

In this way the relations between the medical man and his patients are not interfered with.

QUESTIONS

To be answered by the Divisions.

INSPECTION.

System of Payment. (See Report, Section 3.)

1. (a) Does the Division approve of the system of payment per head?
- (b) If so, should it be such as has been adopted in Hertfordshire or in Derbyshire?
- (c) Or a fixed minimum payment per head of school attendances, and if so, what payment?
- (d) Or does the Division suggest any other method of payment?

TREATMENT OF SCHOOL CHILDREN FOUND DEFECTIVE.

2. Considering the matter with special regard to your local conditions, what are the views of the Division as to the size and method of selection of the Staff of the School Clinic, if the establishment of such should be proposed, and how do you think that they should be remunerated, e.g., by (i) fixed salary; (ii) payment by time; (iii) payment per case, or by what other method? (See Report, Sections 14, 15, and 16.)
3. Divisions which comprise rural areas are invited to state similarly their views as to establishment of School Clinics or, in the alternative, the recognition of the Surgeries of those practitioners who are willing to undertake the work? What method of selection and payment of practitioners engaged in such work is considered advisable?
4. What suggestions, if any, have Divisions to offer as to the methods which are to be adopted to ensure that parents who can afford to pay for the treatment of their children, when found defective as the result of medical inspection of school children, should be compelled to do so? (See Report, Sections 19 and 14.)

APPENDIX B.

SUMMARY OF OPINIONS OF DIVISIONS ON QUESTIONS AFFECTING INSPECTION AND TREATMENT, REFERRED TO THEM BY REPORT ISSUED DECEMBER, 1908.

The number of Divisions in England and Wales, excluding the Channel Islands and the Isle of Man, is 157. Up to April 15th, 1909, 103 Divisions had replied to some or all of the questions submitted.

A. INSPECTION.

Question 1 (a) "Does the Division approve of the system of payment per head?"

Out of 63 replies 13 approve (with more or less qualification) of some method of capitation payment, 46 disapprove, 4 express no general opinion.

Of the 46 Divisions which approve payment by Salary:—

- 25 approve fixed Salary,
- 10 approve fixed Salary and whole-time employment.
- 1 approves fixed Salary and whole-time employment for Town Officers, and Time rate (12s. 6d. per hour) for part-time Country Officers (if any).
- 10 approve Salary based on time spent.

Question 1 (b) (if the Division approves payment per head) should it be such as has been adopted in Hertfordshire, or Derbyshire? (c) or a fixed minimum payment per head of school attendance, and, if so, what payment? (d) or does the Division suggest any other method of payment?

Of the 18 Divisions (13 are in favour of some form of Capitation payment, and 5 state the payment they prefer if such a method is adopted):—

- 10 approve of minimum 2s. 6d.
- 2 " " Derbyshire system.
- 1 approves of Hertfordshire system.

The rest vary from 1s. 6d. to 5s. per head.

B. TREATMENT.

The School Clinic. 74 replies.

- 63 disapprove of the School Clinic.
- 11 express approval (qualified in some instances).

Scope of Clinic. 11 replies.

All agreed that it should be limited to special diseases, e.g., eye, ear, throat, skin, verminous cases.

Staff of Clinic (if established). 30 replies.

- 15 in favour of whole-time officers.
- 15 of work being done by all medical practitioners willing to undertake the work.

Method of Payment for Clinic. 30 answers.

- 17 approved payment by Salary.
- 9 approved payment by Case.
- 4 approved payment by Time.

Provision for Rural Areas. 53 answers.

40 express approval of the idea of "Recognised Surgeries."

1 expresses disapproval of the idea of "Recognised Surgeries."

12 express specific approval of Watford and Harrow Division plan, namely:—

The Medical Inspector reports a child as defective. The parent is to be notified that the defect is to be attended to before the child may return to school. Should the parents be unable to pay for treatment, then the Educational Department is to give a voucher for the payment of the fee on a fixed scale.

The parent may then take his child to any practitioner whom he may select, and the practitioner will receive his fee from the Education Department.

In this way the relations between the medical man and his patients are not interfered with.

(The above is the form in which the plan was placed before the Representative Meeting and the Divisions.)

Watford and Harrow Division have since modified their scheme as follows:—

The Medical Inspector should report the defect to the Education Committee.*

The Education Committee should notify the parent or guardian that the defect must be attended to.

* Modifications made by Division.

Where the parent or guardian showed that he was unable to pay the fees required, the Education Committee* should give a voucher for the payment of the fees on a fixed scale (after the manner in which payments are made for soldiers on furlough in districts where there is no available officer of Royal Army Medical Corps).

A written report should in each case be given by Medical Inspector of any defect found, and this Report must be handed to practitioner when application for treatment is made.

Thus this way the relations of the medical man and his patient will not be disturbed, as a free choice would be left to the parent or guardian to select his own medical man; but it should be distinctly enacted that charitable institutions should not be made use of in this connection.

Method of ensuring Payment for Treatment.

Nine Divisions think payment should be ensured by Education Authority.

Many Divisions express their inability to answer the question.

APPENDIX C.

ANALYSIS OF REPLIES OF HONORARY SECRETARIES OF DIVISIONS TO QUESTIONS REFERRED TO THEM IN DECEMBER, 1908, DEALING WITH MATTERS OF FACT RELATING TO THEIR DISTRICTS.

A.—INSPECTION.

Question 1. *Officer Appointed.*—What Officer performs the work of medical inspection of school children in the area of your Division—Medical Officer of Health, Assistant Medical Officer of Health, Poor Law Medical Officer, &c.?

Information has been received concerning 94 educational districts.

The officers actually inspecting are:—

Whole-time Medical Inspectors ... 40

Part-time Medical Inspectors (who are in 2 districts the Poor Law Medical Officers) ... 23

Whole-time Medical Officers of Health alone ... 6

Whole-time Medical Officers of Health with Whole-time Assistant Medical Officer of Health ... 2

Whole-time Assistant Medical Officer of Health only ... 10

Part-time Medical Officers of Health ... 13

Question 2. *System of Payment.*—What is the system of payment adopted in your Division area—

(a) For the post of School Medical Officer?

(b) For the actual work of Inspection if separated from that of supervision?

From 23 answers received, it appears that in 10 districts the work of supervision is incorporated with that of the Medical Officer of Health and no extra salary is paid. In 13 districts salaries are paid for the supervision exercised by the Medical Officer of Health.

Payment for Inspection only. 85 answers.

Paid by salary ... 71

Paid by some form of Capitation fee ... 14

Association Intelligence.

PROCEEDINGS OF COUNCIL.

At a Meeting of the Council, held at 429, Strand, London, W.C., on Wednesday, April 28th, 1909, at 2 o'clock in the afternoon:

Present:

Mr. EDMUND OWEN, LL.D., London, Chairman of Council, in the Chair.

Dr. HENRY DAVY, Exeter, Past-President.

Dr. J. A. MACDONALD, Taunton, Chairman of Representative Meetings.

Dr. EDWIN RAYNER, Stockport, Treasurer.

Dr. JOHN FORD ANDERSON, London
Dr. JAMES GRANT ANDREW, Glasgow
Mr. H. A. BALLANCE, Norwich
Sir JAMES BARR, Liverpool
Fleet Surgeon E. J. BIDEN, R.N., Fareham
Dr. T. R. BRADSHAW, Liverpool
Surgeon-General W. R. BROWNE, C.I.E., (Colombo, Ceylon, and South Indian and Madras Branches)
Dr. E. COCHRANE BUIST, Dundee
Mr. ANDREW CLARK, D.Sc., London
Dr. ASHLEY V. CLARKE, Leicester
Dr. J. WARD COUSINS, Portsmouth
Dr. E. CURETON, Shrewsbury
Mr. C. F. CUTHBERT, Gloucester
Mr. E. J. DOMVILLE, Exeter
Mr. A. J. DREW, Oxford
Dr. G. YOUNG EALES, Torquay
Dr. GEORGE EDMOND, Aberdeen
Mr. J. H. EWART, Eastbourne
Mr. C. E. S. FLEMING, Bradford-on-Avon
Dr. T. W. H. GARSTANG, Altrincham
Dr. J. J. GIUSANI, Cork
Dr. D. GOYDER, Bradford
Dr. T. D. GREENLEES, London (Cape of Good Hope Eastern, Western, and Border Branches)
Dr. G. E. HASLIP, London
Dr. HENRY HETLEY, London
Dr. R. MCKENZIE JOHNSTON, Edinburgh
Colonel C. H. JOUBERT DE LA FERRE (I.M.S. ret.), Weybridge (Representative of the Indian Medical Service)
Mr. HUGH R. KER, London
Mr. R. H. KINSEY, Bedford
Mr. F. C. LARKIN, Liverpool
Dr. A. E. LARKING, Buckingham
Dr. CHARLES MACFIE, Bolton
Dr. DONALD J. MACKINTOSH, M.V.O., Glasgow
Dr. J. MUNRO MOIR, Inverness
Dr. C. G. D. MORIER, London (South Australian and Western Australian Branches)
Professor J. T. J. MORRISON, Birmingham
Dr. B. H. NICHOLSON, Colchester
Dr. FRANK M. POPE, Leicester
Dr. T. WHITEHEAD REID, Canterbury
Dr. H. JONES ROBERTS, Penryn
Major O. L. ROBINSON, R.A.M.C., Netley (Egypt, Gibraltar, and Malta and Mediterranean Branches)
Mr. W. St. A. St. JOHN, Derby
Dr. L. KRISTIAN E. SHAW, London
Lieutenant-Colonel R. J. S. SIMPSON, C.M.G., London (Griqualand West, Natal, and Transvaal Branches)
Dr. HENRY SMURTHWAITE, Newcastle-on-Tyne
Dr. W. JOHNSON SMYTH, Bournemouth
Mr. CHARLES R. STRATON, Salisbury
Mr. J. LYNN THOMAS, C.B., Cardiff
Dr. G. J. CRAWFORD THOMSON, London
Dr. ALEXANDER TROTTER, Perth
Mr. T. JENNER VERRALL, Brighton
Dr. ARTHUR T. WEAR, Newcastle-on-Tyne
Dr. SINCLAIR WHITE, Sheffield
Mr. D. J. WILLIAMS, Llanelli
Lieutenant-Colonel E. M. WILSON, C.B., C.M.G., Farnborough (Representative of the Army Medical Service)

Minutes.

The Minutes of the last Meeting, held on January 27th, 1909, having been printed and circulated, were taken as read, and duly confirmed.

Apologies.

Letters of apology for non-attendance were received from the President-elect, Dr. Wm. Hall, Dr. C. J. Martin, Dr. T. G. Nasmith, Dr. Cecil Shaw, and Professor A. H. White.

Deaths.

The CHAIRMAN reported the deaths of the President of the Association (Mr. Simeon Snell) and Mr. C. G. Wheelhouse, when the following Resolutions were passed, all Members rising in their places:

That the Council of the British Medical Association desires to express its deep sympathy with Mrs. Snell, and its great regret at the loss the Association has sustained by the death of their distinguished President. The Council desires to assure Mrs. Snell and the members of her family that in recording its own regret and sympathy it is also expressing the sentiments of the Members of the Association.

That the Council learns with profound regret the death of Mr. C. G. Wheelhouse, F.R.C.S., and desires to convey to Mrs. Wheelhouse its expression of deep sympathy with her in the loss she has sustained. The Council also desires to place on record its recognition of the conspicuous services rendered to the Association by Mr. Wheelhouse for upwards of forty years, during which time he held the offices of President of the Council, and President of the Association.

Replies to the Resolutions of condolence passed by the Council on the deaths of Dr. W. A. Elliston and Mr. George Eastes were read and ordered to be entered on the Minutes.

The CHAIRMAN reported that at the time of the death of Mr. Thomas Wakley, Editor of the *Lancet*, he had conveyed to Mrs. Wakley and his family the sympathy of the Council in their loss.

Journal and Finance Committee.

The TREASURER presented the Minutes of April 22nd, 1909.

In reference to the Recommendation:—

That the Council report to the Representative Meeting as follows:

The Council considered the following Resolutions of the Representative Meeting:

Minute 544. That the whole work of the Association be arranged in three co-ordinate Departments: (a) Financial; (b) Editorial; (c) Medical or Professional.

That these Departments be respectively under the following Officers: (a) Financial Secretary; (b) Editor; (c) Medical Secretary, who shall hold equal official positions in the Association.

and gave effect to them by deciding, at the Meeting in October, that the office of the General Secretary and Manager should be known as that of the Financial Secretary as from January 1st, 1909.

Upon consideration of a Memorandum subsequently submitted by Mr. Elliston, the Council has come to the conclusion that it is desirable in the interests of the Association that the words "Business Manager" should be added to his title, in order that the duties of the office may be more correctly described.

The Council recommends the Representative Meeting to approve that the title of the office formerly known as that of General Secretary and Manager be henceforth Financial Secretary and Business Manager.

On a Motion by Dr. DAVY to reject the Recommendation, the CHAIRMAN ruled that the principle involved could not be discussed, as the change of title had been definitely accepted by the Council, and that the Council could only amend the wording of the proposed Report before transmitting it to the Representative Meeting, should it think fit to do so.

After further discussion as to the Chairman's ruling it was

Moved by Dr. POPE, seconded by Sir James BARR, That as a protest against the ruling of the Chairman the Meeting stand adjourned.

The Motion having been put from the Chair, was declared to be lost.

An Amendment was moved by Mr. DOMVILLE, seconded by Dr. DAVY,

That before deciding on the form of recommendation to be sent to the Representative Meeting as to the title of the Financial Secretary, the opinion of Council be taken as to the alterations required in the By-laws and Articles of Association before such alterations can take effect.

The Amendment having been put from the Chair, was declared to be lost, 25—27.

The CHAIRMAN thereupon put the Recommendation of the Journal and Finance Committee, which was declared to be carried, 26—24.

The 1908 Balance Sheet.

The Financial Statement for the year ending December 31st, 1908, as certified by the auditors, was received and approved, and, in accordance with By-law 35, ordered to be presented to the Annual General Meeting and the Annual Representative Meeting.

The accounts for the quarter ending March 31st last, amounting to £11,419 6s., were received and approved, and

the Treasurer empowered to pay those remaining unpaid, amounting to £3,262 16s.

Uterine Cancer Committee.
Dr. BERS presented the Report of the Uterine Cancer Committee of February 9th and March 3rd, 1909.

Instructions were given that the Appeal to Medical Practitioners to promote the early recognition of Uterine Cancer be printed in the *BRITISH MEDICAL JOURNAL* (see p. 1189) and communicated to all British and Colonial Medical Journals, and that the Appeal to Midwives and Nurses be printed in the *BRITISH MEDICAL JOURNAL* and communicated to all British and Colonial Medical and Nursing Journals.

Copies of the Appeal to Midwives and Nurses will be forwarded to Branch and Division Secretaries asking for their co-operation in the movement, and stating that further copies, if required, will be supplied at cost price.

Ophthalmia Neonatorum Committee.

The TREASURER presented the Report of the Ophthalmia Neonatorum Committee of February 20th, March 20th, and April 3rd, 1909.

The Report of the Committee will be brought forthwith to the notice of the Officers of the Sections of Ophthalmology and Obstetrics at the Annual Meeting, with a request to consider the practicability of including in their programmes a joint session for the consideration of the Recommendations.

The Report was published in the SUPPLEMENT of May 8th, p. 221.

The Committee was reappointed for the purpose of considering the results of the discussion at the Annual Meeting, and making recommendations to the Council as to the action to be taken to give effect to the Report.

Organization Committee.

Mr. ANDREW CLARK presented the Report of the Organization Committee of March 9th and April 13th, 1909.

The Organization Committee was authorized to draft, in conjunction with the legal advisers of the Association, for the consideration of the Council, a Reply to the Petitions which have been presented in opposition to the grant of a Charter in the form applied for by the Association, and the Chairman of Council was authorized to convene at the earliest possible date a Special Meeting of Council for the consideration of such draft.

The items of expenditure, reported by Branches for 1906, '07, and '08, which are not in accordance with the Regulations of the Association cannot be recognized by the Council as defrayed from the funds of the Association. Balances in the hands of the Branches will be calculated as though such expenditure had not been made.

In the United Kingdom the Treasurer will make payment to Branches for 1909 on the following basis:

- (a) No grant to a Branch which has not furnished a Report of its expenditure for the year 1908, pending receipt of such Report.
- (b) To each Branch in the United Kingdom whose average expenditure for the past three years has been less than 2s. per head of its membership, a Grant of the amount of its average expenditure for the past three years.
- (c) To each Branch whose average expenditure for the past three years has not been less than 2s. per head, a Grant of 2s. per head.
- (d) Such Grants to be paid in instalments as follows:
1909-10, 3d. per head of the membership, as shown by the Annual List of Members made up to April 30th, to be paid on May 31st; 6d. per head of the membership, as shown by that list, on September 30th; and the balance due, based on the number of Members who have paid their subscriptions for the year, at the end of the year.

The Council will be prepared to take into consideration, in due course, applications for further sums, on being satisfied that such further sums are required to enable the Branch applying, and their Divisions, to carry out their work satisfactorily.

The Grants for 1909 to the Colonial Branches will be, as in previous years, at the rate of 4s. per Member who has paid the full subscription for the year, and 2s. per Member elected after July 1st, who has paid half the ordinary subscription.

The Council recommends the Representative Meeting to amend the Schedule to the present By-laws of the Association as to Standing Committees by making such verbal changes as are necessary to bring it into conformity with the Schedule as to Standing Committees appended to the Draft Charter.

The Council recommends the Representative Meeting at Belfast that the present By-laws of the Association numbered 23 to 32 inclusive, relative to the composition and mode of election of Council, be repealed, and the By-laws numbered 37 to 46 inclusive in the Schedule to the Draft Charter, relating to the same subject, be adopted in substitution thereof, subject to such verbal amendments or alterations as the legal advisers of the Association may deem to be necessary.

The Council will report to the Representative Meeting that of the Resolutions of the Meeting relating to the Recommendations of the Finance Inquiry Committee that contained in Minute 515 has already been given effect to by the alteration of the By-law as to Capitalization Grants, and that the other Resolutions, in reference to which Amendments of the By-laws are not now being recommended, are found either not to require any alteration of the Regulations of the Association to carry them into effect, or to be such as could not be given effect to by an amendment of the By-laws.

Independent representation is granted to the West Bromwich Division, formerly grouped with the Dudley and Bromsgrove Divisions; also to the Buckinghamshire Division, and to the Northamptonshire Division (formerly grouped with Aylesbury Division). The remaining Divisions in the United Kingdom are provisionally granted independent representation or grouped with other Divisions for representation for the year 1909-10 in the same manner as they were grouped for the year 1908-9.

The Branches in the United Kingdom are provisionally granted independent representation, or grouped as the case may be, for the year 1909-10 in the same manner as for the year 1908-9.

The Council authorized the Organization Committee, finally to determine the grouping of Branches and Divisions, as soon as possible after the information contained in the Annual List of Members is available.

It will be reported to the Representative Meeting that the suggestion contained in Minute 173 of the meeting is impracticable, but that the possibility of making arrangements for approaching medical students directly is under consideration.

The Council approved a new Rule of the Natal Branch in substitution for their present Rule 26.

Science Committee.

Dr. BUIST presented the Report of the Science Committee of March 20th, 1909.

The Standing Orders as to Scholarships and as to Grants, submitted by the Committee, were adopted, and the remainder of the Report approved.

Premises Committee.

Mr. ANDREW CLARK presented the Report of the Premises Committee of March 24th and April 23rd, 1909, which was approved.

Hospitals Committee.

Dr. POPE presented the Report of the Hospitals Committee of March 25th, 1909.

Poor Law Reform Committee.

It was decided that a Special Committee be appointed to consider the Reports of the Royal Commission on the Poor Law as affecting the medical profession, and to report thereon to the Council, with recommendations as to any action which should be taken by the Association; that for the consideration of questions affecting England and Wales the Committee consist of five members nominated by the Medico-Political Committee, three members nominated by the Public Health Committee, and two members nominated by the Hospitals Committee, with power to add to their number; that for the consideration of questions affecting the United Kingdom there be added two members nominated by the Scottish Committee, and two members nominated by the Irish Committee; and that it be referred to the Scottish Committee and the Irish Committee, to consider questions specially affecting Scotland and Ireland.

General Ethical Committee.

Mr. KINSEY presented the Report of the Central Ethical Committee of March 25th, 1909.

The Council approved the adoption of Bradford Rules (A), (as modified), (B), (C), (D), (E), (F), (G), and (H), and Rule "Z," by the Altrincham Division of the Lancashire and Cheshire Branch; the Model Ethical Rules of Procedure and the Bradford Rules by the Denbigh and Flint Division of the North Wales Branch; the Model Ethical Rules of Procedure of a Division and Model Ethical Rules of a Branch (composed of several Divisions) by the Natal Branch; the Model Rules of Procedure, Bradford Rules (except E), Rule Z, and certain additional Rules by the Cleveland Division of the North of England Branch; the Bradford Rules, and Rule "Z," by the Burnley Division of the Lancashire and Cheshire Branch; the Model Ethical Rules of Procedure, Bradford Rules, and Rule "Z," by the Buckinghamshire Division of the South Midland Branch; the Model Ethical Rules of Procedure, by the North Wales Branch; and the Bradford Rules, and Rule "Z," by the North Lincoln Division of the East York and North Lincoln Branch.

The Central Ethical Committee was also authorized to approve Ethical Rules of Divisions and Branches which are in accordance with Rules already approved by the Council.

Irish Committee.

Dr. GUSANI presented the Report of the Irish Committee of March 27th, 1909, which was approved.

Naval and Military Committee.

Colonel JOSEPH DE LA FERRÉ presented the Report of the Naval and Military Committee of April 5th, 1909, which was approved.

Public Health Committee.

Mr. DOMVILLE presented the Report of the Public Health Committee of April 6th, 1909, which was approved.

Medico-Political Committee.

Dr. MACDONALD presented the Report of the Medico-Political Committee of April 7th and 14th, 1909.

A circular letter, to be signed by Representatives of the British Medical Association and of the Association of Registered Medical Women, is to be addressed to all registered medical women, drawing attention to the special importance at the present time of united action with regard to appointments, particularly public appointments open to women; that they be advised to watch closely the Warning Notice in the BRITISH MEDICAL JOURNAL and obtain advice with reference to appointments named therein, and also, when in doubt as to any appointments not mentioned in the Warning Notice, to apply to the Association of Registered Medical Women, to the Medical Secretary of the British Medical Association, or to the Honorary Secretary of the local Division of the Association, for information; and that such circular be signed, on behalf of the Association, by the Chairman of Council, the Chairman of the Medico-Political Committee, and the Chairman of the Contract Practice Subcommittee.

It was decided that the Model Rules of a Public Medical Service be approved, subject to such slight alterations as the Chairman of the Medico-Political Committee and the Chairman of the Contract Practice Subcommittee may find necessary, upon consideration of Counsel's opinion upon the points reserved, and issued for the consideration of the Divisions; that the attention of Divisions be drawn to the desirability of considering in connexion therewith the recommendations of the Reports of the Royal Commission on the Poor Law concerning Public Medical Assistance.

The Annual Representative Meeting will be recommended to approve that, if it be found desirable to appoint a class of School Medical Officers having supervising as well as inspecting duties, a rate of salary should be fixed above the minimum adopted by the Association, for Officers engaged in inspection only.

The Council approved of evidence being given on behalf of the Association to the Departmental Committee on the Midwives Act, and Dr. L. McManus, Dr. J. H. Taylor, Mr. C. E. S. Fleamming, and the Medical Secretary were appointed to give such evidence.

The Council approved the issue of the Report and Recommendations on Medical Inspection of School

Children and Treatment of those Found Defective, submitted by the Medico-Political Committee, for the consideration of the Divisions and Representative Meeting (see p. 245).

The Council will bring, in due course, before the United Kingdom Hospitals Conference, or any similar Conference, the question of Treatment of School Children found defective on Medical Inspection, as affecting Hospitals and the Medical Profession.

The matter of the suggested nomination of officially recognized representatives of the British Medical Association in the House of Lords was referred to the Representative Meeting.

Scottish Committee.

Dr. BRIST presented the Report of the Scottish Committee of April 8th, 1909.

It was decided that it is inadvisable that the Midwives Act should be extended to Scotland, and that evidence be led in opposition to the proposal.

The principle of separate Registration of Nurses in Scotland, as embodied in the Bill introduced by Mr. Cleland, will be supported, while any Bill which does not provide for reciprocity of Registration within the United Kingdom will be opposed.

Election of Members.

The 19 candidates whose names appeared on the agenda were duly elected Members of the British Medical Association.

Presidency.

Dr. Henry DAVY was invited to fill the office of President of the Association until the Annual Meeting, vice Mr. Simeon Snell, deceased.

Annual Report of Council.

The Annual Report of Council was considered, approved, and remitted to the Chairman of the Council to adjust in accordance with the instructions of Council.

Reports of Branches.

The Reports of Branches for 1908-9, furnished in accordance with By-law 9, were considered and ordered to be published in the SUPPLEMENT.

The Solicitor.

Mr. W. E. HAMPSON was reappointed Solicitor to the Association for the ensuing twelve months.

British Medical Association.

CENTRAL EMERGENCY FUND.

BIRMINGHAM BRANCH FUND FOR COVENTRY DISPUTE.
DR. THOS. WILSON, Honorary Treasurer of the Birmingham Branch, announces that the following further subscriptions have been received since the list published in the SUPPLEMENT of March 6th, 1909, p. 119, where full particulars of the fund were given.

It has been decided by the Council of the Birmingham Branch to close the list on May 31st, and further intending subscribers are asked to forward their donations before that date. Subscriptions may be sent to Dr. J. ORTON, Honorary Secretary of the Coventry Division, Great Heath Street, Coventry; or to the Medical Secretary, British Medical Association, 429, Strand, London, W.C., or to Dr. THOS. WILSON, 87, Cornwall Street, Newhall Street, Birmingham.

Donation of Three Guineas.

Haltwicks, Dr.

Donations of One Guinea.

Mr. W. E. HAMPSON, Secretary of the Branch.
Sawyer, Sir James, Bart., Bart., Bart., S. C.

Donations of Half a Guinea.

Meetings of Branches & Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

GLOUCESTERSHIRE BRANCH.

A GENERAL meeting of the Branch was held at the Gloucester Infirmary at 7 p.m. on April 15th, the PRESIDENT in the chair, and thirty members present.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Cases.—Dr. WAYLAND ANCRUM read notes on two interesting cases of gastric ulcer, and on a case of general peritonitis following appendicitis, showing the good results following free drainage of the abdominal cavity. A discussion followed in which the PRESIDENT, Dr. CLARK, and Dr. COODE took part. Mr. FRIMM CUTHBERT reported some interesting cases, with pathological specimens: (1) Case of tuberculous peritonitis; (2) ovary occurring in hernial sac in a child; (3) malignant growth of vulva; (4) case of renal calculus showing the use of x rays and of urine segregator. The cases were discussed by the PRESIDENT, Dr. BRAMWELL, and Dr. COODE.

Specimens.—Dr. C. L. COODE showed the following pathological specimens: (1) Aneurysm of ascending arch of the aorta; (2) Multilobular cirrhosis of doubtful origin; (3) Pituitary gland and heart from a case of acromegaly. The specimens were discussed by the PRESIDENT, Mr. DYKES BOWER, and Dr. COLLINS. Dr. OSCAR CLARK showed some very interesting skiagrams, but time prevented many from being shown.

Whole-time Medical Officers of Health.—A short discussion followed on the desirability of health officers being required to give their whole time to the work. A letter was read from Dr. BOND, and finally it was proposed by Dr. MEYRICK JONES, seconded by Dr. McMAHON, and carried:

That this Branch considers that for rural districts part time officers are preferable.

Dinner.—Thirteen members afterwards sat down to dinner at the Wellington Hotel.

LANCASHIRE AND CHESHIRE BRANCH:

MANCHESTER (SOUTH) DIVISION.

AN ordinary general meeting of the Division was held at the house of the Chairman, Dr. Percy McDougall, Oak Drive, Fallowfield, on Thursday, May 6th, at 3.45 p.m., Dr. McDougall in the chair. There were seven other members present: Drs. Boyd, Vipont Brown, Grant Davie, Crichton Hood, Hopkinson, Sawers Scott, and Stocks.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Correspondence.—A letter from Mr. Larkin, the Branch Secretary, was read acknowledging the receipt of the nominations for election to the Central Council, and thanking the Division on behalf of himself and colleagues.

Address by Dr. Garstang.—Dr. GARSTANG (Altrincham) then gave an instructive and interesting address on his policy as one of the Division's Representatives on the Central Council. At its close the following resolution was adopted unanimously:

That this Division thanks Dr. Garstang for coming before it and stating the policy of himself and his three fellow candidates for seats on the Central Council; that the Division approves of this policy, and will in every way endeavour to support the four candidates in their election.

The business deferred from the meeting held on March 5th was then taken.

Contributions to Hospitals by Employers and Employees.

—Regarding resolution (a) the Division approved of a definite pronouncement that hospital subscriptions should not be regarded as giving title to unlimited hospital attendance. On the subject of resolution (b) judgement was suspended.

Fresh Public Medical Institutions.—The Division agreed to the principles enunciated.

Sanatoriums for Workers Suffering from Tuberculosis.—The Division concurred with paragraph 3 (a), (b), and (c). Regarding paragraph 4, it was agreed that the opinion of the Association should be notified to any member holding such appointments. The other subjects on the agenda were deferred owing to the lateness of the hour.

Annual General Meeting.—The date of the annual general meeting was fixed for Thursday, May 27th.

OLDHAM DIVISION.

THE annual meeting of the Oldham Division was held on May 4th.

Election of Officers.—The following officers were elected: President, Dr. Martland; Vice-President, Dr. Corns; Representative to Representative Meetings, Dr. Fort; Member of Branch Council, Dr. Murgatroyd; Committee, Drs. Young, Murgatroyd, Carson, and Godson; Honorary Secretary, Frank Radcliffe.

Whole-time Medical Officers.—The report on desirability of health officers being required to give their whole time to the work was considered, and it was resolved:

That medical officers of health should be debarred from engaging in private practice except in rural districts where the population is sparse.

Medical Certificates of Suitability for Hospital Treatment.—The report on the medical certification of suitability for hospital treatment was read, and it was resolved:

That a medical certificate of suitability for hospital treatment be required where practicable as a condition of hospital treatment, except in case of casualties.

Contributions to Hospitals by Employers and Employees.—The report on contributions to hospitals by employers of labour and employees was read, and it was decided to support a and to oppose b.

Fresh Medical Institutions.—The statement as to fresh public medical institutions was read and the printed motion therein approved.

Sanatoriums.—The statement as to sanatoriums for workers suffering from tuberculosis was read, and it was decided to support subclauses a, b, and c, and the resolution of the last Representative Meeting.

Representation of Local Profession on Hospital Boards.—The question of the representation of local medical profession on boards of hospitals was considered, and it was resolved:

That where the hospital staff consists of general practitioners who are ex officio members of the governing body of the hospital there is no necessity for further medical representation on that body.

METROPOLITAN COUNTIES BRANCH:

ST. PANCRAS AND ISLINGTON DIVISION.

A MEETING of this Division was held at the Midland Grand Hotel, King's Cross, on Tuesday evening, May 4th. J. F. J. SYKES, M.D., D.Sc., Medical Officer of Health for St. Pancras and Chairman of the Division, presided.

The Diagnosis of Gastric Disease.—Dr. LAURISTON SHAW, Physician to Guy's Hospital, opened a discussion on the diagnosis of gastric disease, and critically reviewed the methods of gastric examination. He was of opinion that a correct diagnosis was most likely to be arrived at after due consideration had been given to a carefully-sifted history combined with skilful physical examination, and after due weight had been given to such help as a chemical and bacteriological investigation might afford. He pointed out the great aid which in recent years had been derived from radiography, and gave particulars of the methods employed and quoted interesting instances. He pointed out the value of a distinctly visible gastric peristalsis as a sign of pyloric constriction, the value of succussion as a sign of atonicity of the muscular wall, rather than of simple increase in the size of the organ, and the fallacies of attempts to estimate the size of the stomach by mapping out the gastric resonance by percussion. He laid stress on the value of surgical operations in suitable cases and the indications which should guide physicians in advising operation. Dr. LARIN expressed the opinion that gastro-enterostomy did not always cure or even prevent the formation of a gastric ulcer, and quoted an instance which had come under his notice of the development of a gastric ulcer in a case in which some months

previously gastro-enterostomy had been successfully performed for perforating ulcer of the duodenum. Dr. SYKES, Dr. SAYER, Dr. WARD LAWSON, Dr. GUINN, and other members took part in the discussion, and gave instances of interesting gastric disease which had occurred in their practice. Dr. LAURISTON SHAW, in replying to the various points raised in the discussion, stated that in women profuse hæmatemesis did undoubtedly occur in the absence of gross lesions, and that Dr. Hale White had proposed for such a condition the name "gastrastaxis," that the prognosis of cancer of the stomach even after surgical removal was exceedingly bad, and concurred with the statement made by Dr. Goodhart many years ago that there was no prospect of cure in cases of cancer that were sufficiently advanced to be palpable through the abdominal wall. An early diagnosis of the condition was highly necessary, so that the surgeon could be called in at an early stage.

Vote of Thanks.—On the motion of Dr. SYKES, seconded by Dr. WALTER SMITH, a hearty vote of thanks was accorded to Dr. Lauriston Shaw for his interesting communication and for his strenuous services on behalf of the Association, especially in such matters as pertained to the interests of general practitioners.

NORTH OF ENGLAND BRANCH: HARTLEPOOL DIVISION.

REFERENCE is made in this week's issue of the JOURNAL to a case in which Dr. Morgan, of West Hartlepool, was made the object of an unwarrantable attack in the local press for not attending a street emergency when summoned to do so by the police, though he is not police surgeon and was not the doctor nearest at hand. The matter has been taken up by the West Hartlepool Division, which, at a largely attended meeting, held on April 29th, Dr. A. E. S. JACK (President) in the chair, unanimously passed the following resolutions:

1. That this meeting is of the opinion that the attack made upon Dr. Morgan in a newspaper called *John Bull* is unfair and founded upon ignorance of the practice obtaining in London and other cities, and of the fact that Dr. Morgan was not informed that the case he was asked to attend was of a serious nature, and also that he had no opportunity of attending the inquest to rebut the statements made there.
2. That it is no part of the duty of a district medical officer to attend persons injured by accident or suddenly taken ill in the streets.
3. That, having regard to the fact that the duty of controlling traffic and preserving order in the streets is thrown upon the police, the proper practice to be observed in cases of street accidents and emergencies is that obtaining in the metropolitan district, where the police call in a medical man and pay certain specified fees.
4. That it is regrettable that there should be any question of fee for medical attendance in street emergencies, but that, whilst medical men do frequently attend such cases without receiving any remuneration, they ought not to be expected to do so gratuitously as if it were a matter of duty.
5. That the British Medical Association be asked to approach the proper public authorities with a view to the practice in regard to the medical treatment of street accidents and emergencies being placed on a businesslike footing.

A report of the inquest in this case is contained in the *Northern Daily Mail* of April 2nd. The circumstances, as there stated, are briefly as follows:

Stephen Nossiter, aged 69, a naval reserve pensioner and retired captain of the mercantile marine, attended a football match, and was afterwards found lying on his face in the street. He was removed to a house near by, where he died shortly afterwards. It appeared that about a fortnight earlier he had had a fit.

A police sergeant stated in evidence that he was informed by a messenger and by telephone of the incident; the sergeant telephoned to Dr. Morgan, Poor Law medical officer, and Dr. Morgan asked who would be responsible for his fee; the sergeant replied that the police would not be responsible. Dr. Morgan thereupon refused to go. Immediately afterwards the sergeant received a telephone message that the man was dead.

Medical evidence given by Dr. Biggart was to the effect that the cause of death was apoplexy.

In summing up, the Coroner said that where the police themselves were responsible for the first offer of humanity, they would, he presumed, summon their own surgeon; but in this case they hardly had custody, and it seemed to him that in a case like this, where the man was not identified, the Poor Law was the department from which to expect to get prompt service. This raised the question whether the Poor Law medical officer stood in the same relation to the unknown and the poor as a private practitioner. It would probably be found that there was a certain amount of red tape which would excuse the medical officer of the Poor Law from acting unless he had orders given to him in a prescribed official form. The Coroner did not consider this satisfactory, and was glad to know that the Government had in view the overhauling of the Poor Law system.

The jury returned a verdict that the deceased died from apoplexy, and desired to express their disapproval of the conduct of the parish doctor in refusing to attend this urgent case unless granted a professional fee. The Coroner said that he understood the feeling which led to that expression of opinion, but at the same time was bound to say that the red tape arrangements of the Poor Law system were largely responsible.

We are informed that Dr. Morgan had previously been sent for by the police to attend to street emergencies, but that on sending in his account to the Superintendent of Police, the latter had returned it and repudiated liability: Dr. Morgan had then informed the Superintendent that he would in future refuse to go to any such cases.

SOUTH-EASTERN BRANCH: BRIGHTON DIVISION.

A MEETING of this Division was held at the dispensary on May 5th. Mr. R. P. JEFFERSON was in the chair, and twelve members were present.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Vote of Thanks to Dr. Bushnell.—A resolution was carried unanimously conveying a cordial vote of thanks to Dr. F. G. Bushnell for his services as Representative at the Representative Meeting, and recording at the same time the Division's appreciation of the papers on pathology which he had read before meetings of the Division.

Paper.—Dr. W. A. HOLLIS read a paper on facial wrinkles and character expression. Dr. HELEN BOYLE alluded to the value of the wrinkles as an indication in cases of melancholia of the gravity of the case. Dr. MARSH pointed out how certain wrinkles were the result of certain occupations, and how they varied according to the temperament of the individual.

Resolutions Submitted to Annual Representative Meeting.—Two resolutions which had been submitted to the Annual Representative Meeting at Sheffield by the Hampstead and Wandsworth Divisions were then discussed. The following resolution was carried unanimously.

Representation of Local Profession on Boards of Management of Hospitals:

That this meeting approves of the principle of the medical profession being represented on the boards of management of hospitals and similar bodies.

Medical Certificates of Suitability for Hospital Treatment.—A report from the Hospitals and Medico-Political Committees was then considered. The following resolution was submitted to the meeting:

That a medical certificate of suitability for hospital treatment be required as a condition of hospital treatment except in the case of casualties.

This was carried, 4 voting in favour and 3 against.

Fresh Medical Institutions.—The following resolution was submitted to the meeting and approved of:

That it is desirable that no fresh public medical institution should be opened without previous consultation with the local medical profession through some organized body, such as the Division of the British Medical Association in the area of which it is proposed to establish such new institution, and that it be an instruction to the Council to give effect to this principle in considering applications from Divisions or Branches for support in dealing with hospital questions.

This concluded the business of the meeting.

DOVER DIVISION.

A MEETING of the Dover Division was held at the Grand Hotel, Dover, on May 7th, at 5 p.m. Dr. ROBINSON took the chair.

Apologies for Non-attendance.—Letters of apology were read from Dr. Parsons and Dr. Bert.

Confirmation of Minutes.—The minutes of the previous meeting were read and approved.

Proposed Division of the South-Eastern Branch.—The Brighton proposal for the division of the South-Eastern Branch was read and discussed, when Dr. Wood proposed that the proposal be negatived. Dr. ADAMSON seconded this, and the Division unanimously voted against the Brighton proposal.

Whole-time Medical Officers of Health.—Dr. Wood proposed:

That medical officers of health should be debarred from engaging in private practice.

Dr. STONE seconded this, and the Division carried it unanimously.

Medical Inspection of Children.—The question of the treatment of the children was discussed. Those children who were not under the Poor Law and whose parents could not afford to pay practitioners for the treatment were recommended to receive vouchers from the local education authority, which vouchers would entitle them to go to their own general practitioner for treatment. Cases requiring treatment by specialists could then be referred to such by their ordinary attendants. In this way probably 75 per cent. of the eye cases would be treated by the practitioner. The other 25 per cent. could be referred to the specialists. Dr. Wood proposed:

That this Division was opposed to any voluntary institution or hospital being subsidized by a local education authority.

Dr. ADAMSON seconded this. The Division passed it unanimously. This action was in line with that approved by the British Medical Association.

Chairman's Resignation.—Dr. Parsons resigned the post of chairman.

New Chairman and Vice-Chairman.—Dr. Wood proposed that Dr. Robinson, Medical Officer of Health for East Kent, should be voted by the Division to the post of Chairman. Dr. ADAMSON seconded this, which was carried. Dr. ROBINSON proposed that Dr. Wood should be voted Vice-Chairman, and Dr. OSBORN seconded this, which was carried.

SOUTH MIDLAND BRANCH:

BEDFORD AND HERTS DIVISION.

A MEETING of this Division was held on Thursday, May 6th, at the County Hospital, Bedford, at 3 p.m. Dr. G. F. DIXON was in the chair. There were present: Drs. Bennett, Best, Birks, Butters, Chillingworth, Cobb, Coombs, Gifford Nash, Leighton, Ross, and Stacey.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Medical Certificate of Suitability of Patients for Hospital Treatment.—After some discussion of this subject, it was proposed by Dr. CHILLINGWORTH and seconded by Dr. BUTTERS:

That a medical certificate of suitability for hospital treatment be required as a condition of hospital treatment except in the case of a casualty.

This, having been put to the meeting, was carried unanimously.

Contributions to Hospitals by Employers and Employees.—Dr. ROSS proposed, and Dr. BIRKS seconded, the following resolution:

That all contributions made by working men in support of hospitals should be considered as general contributions received from the public.

This was passed unanimously.

Fresh Public Medical Institutions.—After discussion of this matter, the following was proposed by Dr. BUTTERS and seconded by Mr. GIFFORD NASH:

That no support be given to the founding of a new public institution staffed by honorary medical officers except with the approval of the Division in which area the proposed new hospital is situated.

The resolution was put to the meeting and carried *nem. con.*

Sanatoriums for Workers Suffering from Tuberculosis.—Mr. W. GIFFORD NASH proposed:

That this Division approve of the statements (a), (b), and (c) in the report of the Joint Committee.

Dr. CHILLINGWORTH having seconded, this was put to the meeting and carried.

Departmental Committee re Midwives Act.—A letter from the Medical Secretary on this subject was read. Answers to the questions (a), (b), and (c) in the letter were given by the fact that, to the knowledge of the members present, no circulars had been sent by the boards of guardians, and question (d), that there is no other local authority. This concluded the business of the meeting, which therefore adjourned.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

ABERDEEN BRANCH.—*Election of Representative of the Branch on the Council of the Association.*—Nominations of candidates must be sent in writing on or before May 22nd to Dr. J. F. Christie, 7, Alford Place, Aberdeen.

BATH AND BRISTOL BRANCH: TROWBRIDGE DIVISION.—The annual meeting of this Division will be held at the Town Hall, Trowbridge, on Saturday, May 29th, at 3 p.m. Agenda: (1) To elect officers. (2) To receive financial statement. (3) To consider matters referred to Divisions: (a) Report on medical certification of suitability of patients for hospital treatment (see SUPPLEMENT to BRITISH MEDICAL JOURNAL, February 27th). (b) Report on contributions to hospitals by employers of labour and employees (see SUPPLEMENT to BRITISH MEDICAL JOURNAL, February 27th). (c) Statement as to fresh public medical institutions:—The Council, acting upon an instruction from the Annual Representative Meeting at Sheffield, refers the following motion for the consideration of the Divisions: "That it is desirable that no fresh public medical institution should be opened without previous consultation with the local medical profession through some organized body, such as the Division of the British Medical Association in the area of which it is proposed to establish such new institution, and that it be an instruction to the Council to give effect to this principle in considering applications from Divisions or Branches for support in dealing with hospital questions." The Council will be glad to receive from the Divisions their expressions of opinion on the subject. (d) Statement as to sanatoriums for workers suffering from tuberculosis. (4) To consider question of examination of recruits for the Territorial Forces. (5) To consider report on current work of Association.—JAMES PEARSE, M.D., Honorary Secretary.

BIRMINGHAM BRANCH.—*Election of Representatives of the Branch on the Council of the Association.*—Nomination of candidates must be sent in writing on or before May 19th next to Albert Lucas, F.R.C.S., Branch Secretary, 9, Easy Row, Birmingham. The Branch is entitled to elect two members.—ALBERT LUCAS, Honorary Secretary.

BIRMINGHAM BRANCH: CENTRAL DIVISION.—A special and general meeting of this Division will be held on May 19th at the Medical Institute, at 3.30 p.m. Business:—Special: Proposed new Divisional rule. General: Consideration of and instructions of Representative with regard to matters referred to Divisions.—W. TRACY LYDALL, Honorary Secretary.

BIRMINGHAM BRANCH: COVENTRY DIVISION.—The annual meeting of this Division will be held at the Coventry and Warwickshire Hospital on Tuesday, May 25th, at 8 p.m. Agenda: (1) To elect officers and Executive Committee for the year. These include Chairman, Vice-Chairman, Secretary, Representative on the Branch Council, and on the Committees of Management of the Public Medical Service, and the New Dispensary Service. (2) To receive the Report of the Executive Committee. (3) Matters referred to the Divisions: The representation of the local medical profession on Boards of Hospitals and similar bodies (SUPPLEMENT to the BRITISH MEDICAL JOURNAL, April 10th). (4) Recommendation from the Committee that the Division sanction the altering of custom of Division, so that the Chairman's address should be delivered at a meeting other than the October meeting, when the dinner is held. (5) To thank the Committee of the Coventry and Warwickshire Hospital for the continued use of their Board Room for the meetings of this Division.—JOHN ORTON, Honorary Secretary, Coventry.

BIRMINGHAM BRANCH: COVENTRY AND TAMWORTH AND NUNEATON DIVISIONS.—A combined meeting of the Tamworth and Nuneaton Division with the Coventry Division will be held at the Coventry and Warwickshire Hospital on Tuesday, May 25th, at 8 p.m., for the purpose of electing a Joint Representative to represent them at the Annual Representative Meeting, and to instruct him in regard to matters arising at that meeting.—JNO. ORTON, Secretary of the Constituency.

BORDER COUNTIES BRANCH.—The next meeting of this Branch will be held at the Lochmaben Convalescent Hospital for Infectious Diseases, Lochmaben, on Friday, May 21st. Opportunities will also be given to members to inspect the Lochmaben Sewage Works and the Loskerbie Sewage Works. The meeting will be preceded by a meeting of Council, at which the Council's nominees for office in the Branch for the ensuing

year will be chosen. Further details will be sent to each member by post, and will convey information as to trains, motors, etc. A good attendance is specially requested.—FRANCIS R. HILL, Honorary Secretary, Carlisle.

BORDER COUNTIES BRANCH: ENGLISH DIVISION.—The annual meeting of this Division will be held at the County Hotel, Carlisle, on Friday, May 21st, at 12.45, in order to allow members to attend the meeting of the Branch at Lockerbie.—NORMAN MACLEAREN, Honorary Secretary, 25, Portland Square, Carlisle.

BORDER COUNTIES AND NORTH LANCASHIRE AND SOUTH WESTLOND BRANCHES.—*Election of Representative Member of Central Council.*—Nominations, in accordance with the regulations of the Association, must be sent to me in writing on or before May 31st.—A. S. BAILEY, Queen Square, Lancaster.

BORDER COUNTIES BRANCH: SCOTTISH DIVISION.—The annual general meeting of this Division will be held on Friday, June 4th, at the Dumfries and Galloway Royal Infirmary, Dumfries, at 3 p.m.—GEORGE R. LIVINGSTON, Honorary Secretary.

DUNDEE, PERTH, AND STIRLING BRANCHES.—*Election of Representative Member of Central Council.*—Nominations, in accordance with the regulations of the Association, must be sent to me on or before Saturday, May 22nd.—R. C. BUIST, M.D., 166, Nethergate, Dundee, Returning Officer.

EAST ANGLIAN BRANCH.—The annual meeting of the Branch will be held at the Grand Hotel, Clacton-on-Sea, on Thursday, July 1st.—B. H. NICHOLSON, East Lodge, Colchester, Honorary Secretary.

EAST ANGLIAN BRANCH.—Nominations for the election of Representative Members of Central Council must be forwarded to me not later than June 1st next.—B. H. NICHOLSON, East Lodge, Colchester, Honorary Secretary.

EAST YORK AND NORTH LINCOLN AND CAMBRIDGE AND HUNTINGDON BRANCHES.—*Election of the Joint Representative on the Central Council of the Association.*—Nominations of candidates must be sent in writing, on or before May 29th next, to EDWARD TURTON, Branch Secretary, 1, Albion Street, Hull.

EAST YORK AND NORTH LINCOLN BRANCH: EAST YORK DIVISION.—The annual meeting of this Division will be held in the Board Room at the Hull Royal Infirmary, on Friday, May 21st, at 8.15 p.m. prompt. Agenda: (1) To read and, if approved, confirm the minutes of the last annual meeting. (2) To receive the annual report of the Executive Committee. (3) To receive the Treasurer's financial statement. (4) To elect Chairman, Vice-Chairman, and Honorary Secretary and Treasurer. (5) To elect six Representatives of the Division on the Branch Council (Dr. J. Mitchell Wilson, having served for five consecutive years, is ineligible for re-election, under Rule 8). (6) To elect two additional members of the Executive Committee. (7) Recommendation of the Executive Committee: That Rule 5, which reads, "The officers of the Division shall be a Chairman, Vice-Chairman, and Secretary who shall also act as Treasurer," shall be altered so as to include the ex-Chairman as an officer of the Division." (8) Mr. E. H. Howlett will give a Demonstration on Recent Advances in X-Ray Work, including Instantaneous and Stereoscopic Radiography. Should time permit, the following matters referred to Divisions by the Representative Meeting of various Branch Committees will be discussed: (9) Report on medical certification of suitability of patients for hospital treatment (see BRITISH MEDICAL JOURNAL SUPPLEMENT of February 27th, 1909). (10) Report on contributions to hospitals by employers of labour and employees (see BRITISH MEDICAL JOURNAL SUPPLEMENT of February 27th, 1909). (11) Statement as to fresh medical institutions. (12) Statement as to sanatoriums for workers suffering from tuberculosis. (13) Representatives of local medical societies on boards of hospitals and similar bodies (see BRITISH MEDICAL JOURNAL SUPPLEMENT, April 10th, 1909). (14) Report on desirability of health officers being required to give their whole time to the work (see BRITISH MEDICAL JOURNAL SUPPLEMENT, January 23rd, 1909). To transact any other business which can be discussed at annual meetings.—EDWARD TURTON, Honorary Secretary, Hull.

GLASGOW AND WEST OF SCOTLAND BRANCH.—*Election of Members of the Central Council.*—In accordance with Association By-laws 25, Branch Rule 5, nominations for Representatives on the Central Council, each signed by at least three electors, are requested to be sent to me on or before Wednesday, May 26th. The Branch is entitled to return two Representatives. The present Representatives, Mr. James Grant Andrew and Dr. D. J. Mackintosh, M.V.O., are eligible, and seek re-election.—Wm. D. MACFARLANE, Jun., 17, Woodside Crescent, Honorary Secretary.

GLoucestershire BRANCH.—The annual meeting of the Branch will be held at the General Hospital, Cheltenham, on Thursday, May 20th, at 8 p.m. Agenda: (1) Election of officers and ordinary members of the Branch Council. (2) To receive

the annual report of the Branch Council. (3) To consider the business of the Annual Representative Meeting. Any member having any matter which he would like brought by the Branch Representative before the Annual Representative Meeting of the Association is requested to immediately send the Secretary notice of same for discussion at the annual meeting of the Branch. (4) To make new rules, or alter or repeal existing rules. Any member desiring any alteration, etc., of rules, if new rule made, is requested to send immediate notice of same to the Secretary. (5) Dr. O. H. Fowler, of Cirencester, will read a paper "Thoughts in view of the practical experience of the last thirty-seven years, during which period the Association has enjoyed great financial prosperity, it has been proved that, in the best interests of the British Medical Association, it is essential to have an official with the rank and status of 'General Secretary and Manager'; and that such official should possess special business training. Further, that having regard to the highly satisfactory manner in which Mr. Guy Elliston has discharged the duties since his appointment in 1902, it is in the interests of the Association that his services should be retained as 'General Secretary and Manager'; and that the Representative of the Gloucestershire Division to the Representative Meeting at Belfast be instructed accordingly." (6) Address by Dr. W. Aldren Turner, of London, on "Fenolic Conditions allied to Epilepsy." There will be a dinner at 8 p.m. at the Oriental Café, High Street, Cheltenham. Tickets 5s. each (inclusive of wine). Those intending to remain for the dinner are requested to intimate their intention to Dr. Munro not later than Tuesday, May 18th.—D. E. FINLAY, Honorary Secretary.

LANCASHIRE AND CHESHIRE BRANCH.—The Branch Ethical Committee will meet at 4.30 p.m. on Wednesday, May 19th, at Onwards Buildings, 207, Deansgate, Manchester.—F. C. LARKIN, Branch Secretary, Liverpool.

LANCASHIRE AND CHESHIRE BRANCH.—The annual meeting of the Branch will be held at Chester on Wednesday, June 16th.—F. CHARLES LARKIN, Branch Secretary.

LANCASHIRE AND CHESHIRE BRANCH: LEIGH DIVISION.—The annual meeting of this Division will be held on Thursday, May 20th, at the Club and Restaurant, Ellesmere Street, at 8.30 p.m. Agenda: (1) Minutes. (2) Secretary's report. (3) Election of officers. (4) Cycle run. (5) Other matters.—G. H. SHAW, Honorary Secretary.

LANCASHIRE AND CHESHIRE BRANCH: ST. HELENS DIVISION.—A meeting of this Division will be held on Wednesday, May 19th, at 8.45 p.m., in the Fleeces Hotel, St. Helens. Business: Annual Meeting, Central Council election.—JOHN J. BUCHAN, Honorary Secretary.

METROPOLITAN COUNTIES BRANCH.—*Nominations of Branch Officers.*—Pursuant to By-law 25, notice is hereby given that nominations for all the officers of the Branch—namely, President-elect, Vice-Presidents, Secretary, members of the Branch on the Central Council of the Association—must be sent in to the Honorary Secretary of the Branch on or before May 29th. Voting papers will be sent out on or before June 5th, and must be returned to the Secretary on or before June 12th.—ATWOOD THORNE, E. W. GOODALL, Honorary Secretaries.

MIDLAND BRANCH.—The annual meeting of this Branch will be held at the Leicester Infirmary on Thursday, June 10th. (1) The President-elect, Dr. R. Pratt, will give an address. (2) Election of Branch officers. (3) Annual report of the Branch. (4) Any other business. In accordance with the by-laws, notice is hereby given that nominations for the election of two Representatives of this Branch on the Central Council must be sent to the Honorary Secretary of the Branch not later than May 24th.—ROBERT SEVASTRE, Honorary Secretary, London Road, Leicester.

MIDLAND BRANCH: LEICESTER AND RUTLAND DIVISION.—The annual meeting of the Division will be held on Wednesday, May 26th, at the Leicester Infirmary, at 4.15 p.m. Agenda: Minutes of previous meeting; election of Representatives of the Division on the Branch Council, and of officers and members of the Executive Committee of the Division; election of Representative of the Division at Representative Meetings; annual report of the Executive Committee; any other business.—WILFRED E. GIBBONS, Honorary Secretary, Leicester.

MIDLAND BRANCH: LINCOLN DIVISION.—The annual meeting of this Division will be held in the Guildhall, Lincoln, on Thursday, May 20th, at 3.30 p.m. Agenda: (a) To elect a Vice-President of the Midland Branch. (b) To elect officers of the Branch Council, and the ordinary members of the Executive Committee. (c) To elect the Representative in Representative Meetings of the Association. (d) To consider the advisability or otherwise of the earlier appointment of the Representative in Representative Meetings. (e) To deal with certain matters referred by the Hospitals and Medico-Political Committees to the Divisions—namely:

(1) Report on medical certification of suitability of patients for hospital treatment; (2) report on contributions to hospitals by employers of labour and employees; (3) statement as to fresh medical institutions; (4) statement as to sanatoriums for workers suffering from tuberculosis. (f) To answer certain questions relating to the medical inspection of school children and the treatment of those found defective. (g) To reply to the question: Should health officers give their whole time to the work? (see SUPPLEMENT TO BRITISH MEDICAL JOURNAL, January 23rd). (h) Other business. Members desiring to read papers or show cases or specimens are asked to communicate with the Honorary Secretary.—J. S. CHATER, Honorary Secretary, 10, Steep Hill, Lincoln.

NORTH OF ENGLAND BRANCH.—Nominations for the election of members of the Central Council must be sent in to me on or before May 31st.—DAVID F. TODD, Honorary Secretary, Beech House, Sunderland.

NORTH OF ENGLAND BRANCH.—A meeting of the Branch will be held at Cornhill Hotel, Redcar, on Tuesday, May 18th, at 12.30 p.m. The following arrangements have been made: The Branch Council meet at 12.30 p.m. Lunch 1 p.m. 1.45 p.m., business meeting. (1) Ambulance classes and scale of charges. (2) Position of medical practitioners and emergency cases. (3) State registration of nurses.—DAVID F. TODD, Honorary Secretary.

NORTH WALES BRANCH.—Nominations for the election of a Representative on the Central Council and for other officers of the Branch for the next year, in accordance with By-law 25, must be sent to the Honorary Secretary on or before June 1st.—H. JONES ROBERTS, Honorary Secretary, Llywenarth, Pen-y-groes.

NORTHERN COUNTIES OF SCOTLAND BRANCH.—Election of Representative of the Branch on the Central Council of the Association.—Nominations of candidates for election to the Central Council must be forwarded to the Honorary Secretary on or before May 29th.—J. MUNRO MOIR, M.D., 4, Adross Terrace, Inverness, Honorary Secretary.

NORTHERN COUNTIES OF SCOTLAND BRANCH.—The annual meeting of the Branch will be held at Elgin on Saturday, June 5th. Further particulars as to hour and place of meeting will be communicated to each member by circular.—J. MUNRO MOIR, M.D., Honorary Secretary, 4, Adross Terrace, Inverness.

SOUTH-EASTERN BRANCH.—The annual meeting of this Branch will be held at Croydon on Wednesday, June 23rd, Dr. J. J. Macan, President-elect, in the chair. The following will be the agenda:—(1) To elect the officers of the Branch; nominations by three members for the offices of President-elect, Vice-Presidents, and Secretary, may be sent to the Honorary Secretary on or before May 21st. (2) To receive the annual report of the Branch. (3) To transact any business that may be transacted by an ordinary meeting. Three members to represent the Branch on the Central Council will also be elected by voting papers. Nominations for these posts, each by three members in meeting, should be sent to the Honorary Secretary on or before May 21st.—H. M. STEWART, Honorary Secretary, Dulwich.

SOUTH-EASTERN BRANCH: GUILDFORD DIVISION.—The annual meeting of the Division will be held at the Royal Surrey County Hospital on Wednesday, May 26th, at 4.30 p.m. Agenda: (1) Minutes. (2) Election of officers and members of the Executive Committee for the ensuing year. (3) Annual report of the Division. (4) To consider the following proposal of the Brighton Division: "That the South-Eastern Branch be divided into the smaller Branches, one to consist of that part of Kent which is already in the South-Eastern Branch, and the other of the county of Sussex and so much of the county of Surrey as is already part of the Branch." (5) Matters referred to Divisions: (a) Medical inspection and treatment of school children. (b) Whole-time appointments for medical officers of health. (c) Reports from Hospitals and Medico-Political Committees (see SUPPLEMENT TO BRITISH MEDICAL JOURNAL, February 27th). (d) Representation of local medical profession on boards of hospitals and similar bodies (see SUPPLEMENT TO BRITISH MEDICAL JOURNAL, April 10th). (e) Dr. B. H. Kingsford will read notes of a case of intestinal obstruction due to an impacted gall stone, and will exhibit specimen. (f) Mr. E. J. Smyth will introduce a discussion on Ophthalmia Neonatorum, with special reference to the Report of the Committee of the Association on the subject, referred to the Divisions for their consideration (see SUPPLEMENT TO BRITISH MEDICAL JOURNAL, May 8th). (g) Any other business. Tea will be provided at 4.15 p.m. All members of the South-Eastern Branch are entitled to attend and to introduce professional friends. The Honorary Secretary will be glad to receive nominations for any of the above offices, and to hear from any other members willing to show cases or specimens.—E. J. SMYTH, Honorary Secretary and Treasurer, Maythorne, Epson Road, Guildford.

SOUTH MIDLAND BRANCH.—In accordance with By-law 25, notice is hereby given that nominations for the election of a Representative of this Branch on the Central Council must be

sent to me not later than May 22nd next.—E. HARRIES-JONES, 16, Castilian Street, Northampton.

SOUTH WALES AND MONMOUTHSHIRE BRANCH.—Election of Two Representatives on the Central Council of the Association.—In accordance with By-law 25 of the Association, nomination of candidates must be sent to me in writing on or before Saturday, May 22nd next.—ALFRED HANSON, Swansea, Honorary Secretary, South Wales and Monmouthshire Branch.

SOUTH-WESTERN BRANCH.—Election to Central Council.—This Branch is entitled to return two members. Nominations should be sent to the undersigned so as to reach him not later than May 24th.—RUSSELL COOMBE, Branch Secretary, 5, Barnfield Crescent, Exeter.

STAFFORDSHIRE AND SHROPSHIRE AND MID-WALES BRANCHES.—Nominations for the office of Representative on the Central Council of the Association should be sent to the undersigned on or before Saturday, May 15th, in accordance with By-law 25.—G. PETERGAVE JOHNSON, Honorary Secretary, Staffordshire Branch, Brook Street, Stoke-on-Trent; C. G. RUSS WOOD, Honorary Secretary, Shropshire and Mid-Wales Branch, Shrewsbury.

ULSTER BRANCH.—Nominations for the offices of President, Treasurer, and Secretary, each signed by two members, should be sent not later than June 2nd to CECIL SHAW, M.D., Honorary Secretary, 29, University Square, Belfast.

ULSTER AND CONNAUGHT BRANCHES.—Two members to represent the combined Branches on the Central Council will be elected next month. Nominations, signed by three members, should be sent to me not later than June 2nd.—CECIL SHAW, M.D., Honorary Secretary Ulster Branch, 29, University Square, Belfast.

LANCASHIRE AND CHESHIRE BRANCH.

(Western) Division; the Manchester (North) Division; the Manchester (Salford) Division; the Manchester (South) Division; the Preston Division; and by Sir Wm. J. Sinclair, Professor R. B. Wild, Professor Graham Steel, W. T. O'Grady, Percy McDougall, G. H. Grant, Davie, C. S. Redmond, W. G. Booth, N. C. Haring, S. English, F. H. Worswick, L. E. Scanlon, J. W. Hamill, R. H. Wolstenholme, W. B. Bell, H. S. Brightmore, G. W. Beesley, C. L. Skinner, J. P., Allan Whitfield, W. Chris. Brown, J. Gray, J. A. Falarque, W. Sawers Scott, W. P. Stocks, J. J. Berry, H. K. Birley, J. A. Caplan, J. W. C. Herbert, E. Wilson, D. Owen, H. H. Phipps, E. T. Scowley, J. P. Williams, J. S. Frowse, F. Farrow, F. A. Morrison.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

STAFF SURGEON N. IRELAND-SMITH has been placed on the retired list, March 23rd. He was appointed Surgeon, May 16th, 1894, and made Staff Surgeon, May 16th, 1902.

Fleet Surgeon JOHN JENNINGS has been placed on the retired list at his own request, May 7th. Appointed Surgeon, February 16th, 1885, he became Fleet Surgeon, February 16th, 1901.

The following appointments have been made at the Admiralty: Fleet Surgeon, E. MARSHALL, to the *Adriatic*, on recommissioning, May 11th; Staff Surgeon J. D. S. MILLER, M.B., to the *Findlay*, on recommissioning, May 18th; Surgeon W. G. M. ANDERSON, M.B., to the *Scylla*, on recommissioning, May 18th.

ROYAL ARMY MEDICAL CORPS.

The following Captains are promoted to be Majors, dated April 28th: M. D. MCANULTY, M.B., J. POE, M.B., H. G. F. STALLARD, and E. BRODRIBB. Their previous commissions are dated: Surgeon-Lieutenant, July 28th, 1897; Captain, July 28th, 1900. Major M. Carthy took part in the Nile expedition in 1898, receiving the British and Egyptian medals. Major Stallard also served with the Nile expedition in 1898, receiving the British and Egyptian medals; he was also in the operations resulting in the final defeat of the Khalifa in 1899, when he had medical charge of a flying column; he was mentioned in despatches, received a medal with two clasps, and granted the fourth class of the order of the Medjidie.

Promotion to the Rank of Major.

It is notified that it is not the intention that Army Order No. 71 (8) of 1909 should act retrospectively. A Captain of the Royal Army Medical Corps who, prior to July 1st, 1909, is fully qualified for promotion to the rank of Major will not be acted by this Army Order, that is, he will still be considered fully qualified for promotion after that date, irrespective of whether he has passed in subhead (d) (ii) or not, if, however, his discharge is full, and he has not been promoted to the rank of Major at that subhead before promotion to Lieutenant-Colonel, vide para. (9) of the above-quoted Army Order.

Special Reserve.

The following Lieutenants are confirmed in that rank: J. N. McLAUGHLIN, R. T. C. ROBERTSON, M.B., and J. G. McCUTCHEON, M.B.

INDIAN MEDICAL SERVICE.

LIEUTENANT-COLONEL C. P. LUKIS, M.D., Bengal, Principal of the Medical College, Calcutta, has been selected to succeed Sir Gerald Bonford, K.C.L.E., M.D., as Director-General, Indian Medical Service, who proceeded home on May 1st, preparatory to retirement. Colonel Lukis entered the Bengal Medical Department as Surgeon, March 31st, 1880, and became Lieutenant-Colonel, July 12th, 1905. He served with the Mahomedan Warforce expedition in 1881, and with the Zhoi Valley expedition in 1884.

The following officers are promoted to be Lieutenant-Colonels from March 30th—F. R. OZZARD, A. R. S. ANDERSON, M.B., J. T. CALVERT, M.B., W. S. F. RICHARDS, M.B., C. N. MOORE, M.D., E. JENNINGS, A. G. HENDLEY, G. W. JENNET, M.B., and C. T. HEPSON. Their previous commissions, which were simultaneous, are thus dated: Surgeon-Captain, March 30th, 1889; Major, March 30th, 1901. Their records are as follows: Lieutenant-Colonel Ozzard—The two Miranjan expeditions in 1881 (medal with clasp), and the campaign on the North-West Frontier of India in 1897-8 (medal with clasp). Lieutenant-Colonel Calvert—Madagascar expedition, 1891 (medal with clasp); Tirah expedition, 1897-8 (medal with clasp). Lieutenant-Colonel Moore—Campaign on the North-West Frontier of India, 1897-8 (medal with clasp); Tirah expedition, 1897-8 (medal with clasp); China war, 1900 (medal). Lieutenant-Colonel Hendley—Campaign on the North-West Frontier of India, 1897-8 (medal with clasp). Lieutenant-Colonel Hudson—Campaign on the North-West Frontier of India, 1897-8, including operations on the Samana, the action in the Uduan Pass, and with the Tirah Expeditionary Force (medal with three clasps).

Major C. H. L. PALE, M.B., Madras, is permitted to retire from the service, from May 1st. He joined the Madras Medical Department as Surgeon-Captain, July 28th, 1891, and was made Major, July 28th, 1894.

Lieutenant V. B. GREEN-ARMYtage is appointed Specialist in Midwifery and Diseases of Women and Children, Eighth (Lucknow) Division, from February 21st.

TERRITORIAL FORCE.

ROYAL FIELD ARTILLERY.

SURGEON-CAPTAIN A. W. CUFF, M.B., from the 4th West Riding of Yorkshire Royal Garrison Artillery (Volunteers), to be Surgeon-Captain, 3rd West Riding Brigade, with precedence as in the Volunteer Force, April 1st, 1908.

INFANTRY.

Surgeon-Lieutenant D. M. ALEXANDER, 10th (Scottish) Battalion, the King's (Liverpool) Regiment, resigns his commission, March 11th.

ROYAL ARMY MEDICAL CORPS.

North Midland Mounted Brigade Field Ambulance.—ARTHUR C. GOODWIN, M.B., F.R.C.S. Eng., to be Lieutenant, February 22nd, 1909.

Third Northern General Hospital.—Surgeon-Captain A. M. CONNELL, F.R.C.S. Edin., from the 4th West Riding of Yorkshire Royal Garrison Artillery (Volunteers), to be Major, April 1st, 1908. JOHN

S. WHITE, M.D., F.R.C.S. Eng., to be Lieutenant-Colonel, March 5th, 1909.

London Mounted Brigade Field Ambulance.—The appointment of HENRY ROBINSON, M.D., to a Lieutenancy bears date April 1st, 1908, and not March 5th, 1909, as stated in the *London Gazette* of March 28th.

Third West Lancashire Field Ambulance.—RICHARD COFFEY to be Lieutenant, January 11th.

Fifth London Field Ambulance.—SIDNEY F. ST. J. STEADMAN to be Lieutenant, February 1st.

Second Welsh Field Ambulance.—Major A. W. SHEEN to be Lieutenant-Colonel, February 1st.

First London (City of London) General Hospital.—Major W. P. HEALINGHAM, M.D., is seconded for service with the London University Continent, Senior Division, Officers' Training Corps, February 20th.

Second Western General Hospital.—The following announcement is submitted for that relating to Major W. THORNBURN, which appeared in the *London Gazette* of April 27th: Major W. THORNBURN, M.D., F.R.C.S. Eng., to be Lieutenant-Colonel and to be an officer whose services will be available on mobilization, February 28th.

For attachment to Units other than Medical Units.—GERALD S. HUGHES, M.B., F.R.C.S. Eng., to be Lieutenant, December 2nd, 1908. FRANCIS L. A. GREAVES, F.R.C.S. Eng., to be Lieutenant, February 17th, 1909. THOMAS H. U. DERHAM to be Lieutenant, January 1st. THOMAS BROWN, M.B., to be Lieutenant, April 3rd.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 8,595 births and 4,462 deaths were registered during the week ending Saturday last, May 8th. The annual rate of mortality in these towns, which had been 17.1, 15.8, and 14.5 per 1,000 in the three preceding weeks, further declined last week to 14.1 per 1,000. The rates in the several towns ranged from 6.5 in Hornsey, 6.9 in Reading, 7.2 in Willesden, 8.0 in Rotherham, 8.2 in Handsworth (Staffs), 8.7 in East Ham, and 8.9 in King's Norton to 19.2 in Rochdale, 19.3 in Manchester and in Oldham, 19.5 in Roorle, 20.6 in Stockport, 20.8 in St. Helens, 21.2 in Hanley, and 22.4 in Wolverhampton. In London the rate of mortality was 14.1 per 1,000, being one-tenth below the mean rate in the seventy-six towns. The death-rate from the principal infectious diseases in these towns averaged 1.6 per 1,000; in London the death-rate from these diseases was 1.6, while among the seven towns in which other diseases were registered upwards to 3.5 in Swansea, 3.6 in Warrington, 3.7 in Salford, 4.4 in St. Helens, 4.5 in Middlesbrough, and 5.2 in Wigan. Measles caused a death-rate of 1.9 in Salford, 2.0 in Wolverhampton and in Stockport-on-Tees, 2.2 in St. Helens and in Warrington, and 4.6 in Wigan; scarlet fever of 1.1 in St. Helens, 1.9 in Tyne-mouth, 2.1 in Swansea, and 3.5 in Middlesbrough. The mortality from enteric fever and from diarrhoea showed no marked excess in any of the large towns and no fatal case of small-pox was registered during the week. The number of scarlet-fever patients remaining under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 2,236, 2,219, and 2,181 at the end of the three preceding weeks, had further fallen to 2,175 at the end of last week: 309 new cases were admitted during the week, against 244, 255, and 305 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

DURING the week ending Saturday last, May 8th, 991 births and 577 deaths were registered in eight of the principal Scottish towns. The annual rate of mortality in these towns, which had been 18.4, 17.4, and 16.9 per 1,000 in the three preceding weeks, further declined last week to 16.2, being one-tenth above the mean rate during the same period in the seventy-six large English towns. Among these Scottish towns the death-rates ranged from 12.5 in Paisley and 13.0 in Greenock to 19.4 in Dundee and 20.6 in Perth. The death-rate from the principal infectious diseases in these towns averaged 2.2 per 1,000, the highest rates being recorded in Paisley and Perth. The 273 deaths registered in Glasgow included 6 which were referred to scarlet fever, 26 to whooping-cough, 2 to cerebro-spinal meningitis, and 8 to diarrhoea. Eight fatal cases of whooping-cough and 2 of diarrhoea were recorded in Edinburgh: 2 of measles, 4 of whooping-cough, and 3 of diarrhoea in Aberdeen; and 5 of measles in Paisley.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, May 8th, 724 births and 401 deaths were registered in twenty-two principal districts of Ireland as against 612 births and 452 deaths in the preceding period. The annual death-rate in these districts, which had been 26.5, 23.9, and 20.6 per 1,000 in the three preceding weeks, fell to 18.3 per 1,000 in the week under notice, the rate being 4.2 per 1,000 higher than the mean annual death-rate in the seventy-six English towns for the corresponding period. The figures in Dublin and Belfast were 18.8 and 18.3 respectively, those in other districts ranging from 3.9 in Galway to 1.8 in Sligo to 35.4 in Lisburn and 39.3 in Kilkenny, while Cork stood at 19.2. Londonderry at 14.5, Limerick at 12.3, and Waterford at 29.2. The zymotic death-rate in the twenty-two districts averaged 1.0 per 1,000 as against 1.4 per 1,000 in the preceding period.

Hospitals and Asylums.

A SURGICAL HOME.

THE eighth annual report of the Salop Convalescent Home at Baschurch is interesting if only because it contains a statement that it began as an ordinary convalescent home in 1900, and has gradually, by force of circumstances, been developed into a surgical home and hospital for children suffering from tuberculosis of limbs, spine, etc., and from rickets, congenital deformities, flat foot, etc. There are still eight beds in the house used for convales-

cent cases able to walk, and nine consumptive beds in the field. "The exceptional success," the report continues, "which has attended the operations here, with after-treatment in the open air, leads us to think that our most useful future work lies in this direction, and that it would be wise to eliminate gradually the cases of phthisis, and use the accommodation now provided for them for adult surgical tuberculous cases." From a list of the diseases treated, it appears that about one-fourth of the patients were suffering from tuberculous diseases other than phthisis. With regard to the management of such an institution, Mrs. Rowland Hunt, sen., one of the honorary secretaries, writes to us as follows:

Fresh-air treatment requires, to make it beneficial, two expensive things—very good food and unusual warmth. The diet must be rich and varied, with plenty of milk, eggs, and sweets, especially for children. Tea, coffee, or cocoa must be served hot, and every pains taken to induce patients to eat. Woolen vests, jerseys, and flannel nightgowns are an absolute necessity, and plenty of hot bottles. To rest patients in bed, or to take out the windows of hospital wards and leave them with ordinary nonconductive hospital food and ordinary thin clothing is cruel and dangerous. The open-air system is on its trial, and I believe in it so fully that I am extremely anxious it should have fair play. The arrangements here are most primitive: the patients live and sleep in cowsheds facing south. When the blizzard came from the south at the end of December last and blew the snow on to the beds, not a patient (they are mostly children) suffered. The only effect was to make them unusually hungry. Tin bedwarmers kept hot longer than stone or iron-rubbers.

The surgeon to the home is Mr. Robert Jones, of Liverpool, and the medical officer is Dr. R. Urwick, of Shrewsbury.

BARNWOOD HOUSE HOSPITAL FOR THE INSANE, GLOUCESTER.

DR. J. G. SOUTAR, the medical superintendent of this well-known private asylum, in his annual report for the year 1908, shows that on January 1st, 1908, there were 148 certified patients under care and that on the last day of the year there remained 147. The total cases under treatment during the year numbered 179, and the average number resident 152. During the year 31 certified patients were admitted, of whom 23 were direct admissions, 5 transfers, and 3 statutory readmissions. As regards duration of disorder on admission, in 9 the attacks were first attacks within three and in 2 more within twelve months of admission; in 7 not-first attacks within twelve months, and in the remainder the attacks, whether first attacks or not, were of more than twelve months' duration. The admissions were classified according to the forms of mental disorder into: Mania of all kinds, 13; recent and chronic melancholia, 11; secondary dementia, 1; delusional insanity, 2; and general paralysis, 1. With regard to the probable etiological factors, a neurotic family history was ascertained in 35.4 per cent. of the total admissions, and alcohol was assigned in only one case. Otherwise the usual table dealing with this matter does not call for comment. During the year 11 were discharged as recovered, giving a recovery-rate on the direct admissions of 47.8 per cent. or of recoveries in the direct admissions on the direct admissions of 43.4 per cent. There were also 3 discharged as relieved and 11 as not improved. Also 7 deaths occurred among the certified patients, giving a death-rate on the average numbers resident of only 4.6 per cent. All deaths were due to natural causes, the average age at death was 50 years, and the average duration in the hospital was six and a half years. The general health was good throughout the year except for an epidemic of influenza. The hospital maintains the prosperous financial condition in which it has been for years, and though the charitable work was not quite so large during 1908 as in the previous year, 61 patients were maintained below the average rate at a cost to the institution of £3,052 15s. 6d.

Vacancies and Appointments.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column, advertisements must be received not later than the first post on Wednesday morning.

VACANCIES.

ANNUAL MEETING, BRITISH MEDICAL ASSOCIATION, BELFAST, 1909.

THE Seventy-seventh Annual Meeting of the British Medical Association will be held at Belfast from July 23rd, to July 31st, 1909, under the Presidency of Sir William Whitla.

The Annual Representative Meeting commences in Belfast on July 23rd. The Presidential Address will be delivered on July 27th. The Sections will meet on July 28th, 29th, and 30th.

A preliminary programme of arrangements was published in the SUPPLEMENT of May 1st, p. 197. The Honorary Local Secretaries are: Henry Lawrence McKisack, M.D., M.R.C.P., 17, University Square, Belfast; Cecil Edward Shaw, M.A., M.D., M.Ch., 29, University Square, Belfast; and Howard Stevenson, B.A., M.B., F.R.C.S.I., 2, College Square North, Belfast.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

THE British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the BRITISH MEDICAL JOURNAL is supplied weekly, post free, to every member of the British Medical Association, wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a member until he ceases to be a Member in accordance with the provisions hereof.

Cy-law 1.—Every candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

Cy-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every

Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Branch Council at any meeting thereof held not less than seven days after such longer period as the Branch may by its Rules prescribe after the date of the said notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three Members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the BRITISH MEDICAL JOURNAL for non-members is £1 8s. 0d. for the United Kingdom, and £1 15s. 0d. for abroad.

MATTERS REFERRED TO DIVISIONS.

British Medical Association.

Annual Representative Meeting, 1909.

THE Annual Representative Meeting will be held in Belfast on Friday, July 23rd, 1909, and following days as may be necessary.

On the Friday the Meeting will immediately follow the Annual General Meeting to be held at 12 noon.

PROVISIONAL AGENDA.

A. Reception of Return of Representatives Elected.

1. **Motion:** That the Return of election of Representatives of Divisions for the year 1909-10 be received, approved, and entered on the Minutes.

2. **Motion:** That the Notices (if any) of appointment of substitutes for Representatives under Article XXX and By-law 19 be received, approved, and entered on the Minutes.

B. Standing Orders.

For Standing Orders as adopted at Sheffield, see p. 274.)

3. **Motion:** That the Standing Orders, submitted by the Chairman, be adopted as Standing Orders of the Meeting.

The Chairman will submit the Standing Orders adopted at Sheffield, subject to the following Amendments:

- (a) That Subsections vi and vii of Standing Order 1 be deleted.
- (b) That in Subsection viii of Standing Order 1 the word "other" be deleted.
- (c) That Standing Order 7 be amended to read as follows:

If any Motion placed upon the Agenda shall in the opinion of the Chairman relate to the same subject as a Recommendation or other portion of a Report submitted by the Council or by a Committee, the Chairman shall ascertain the will of the Meeting as to whether the said Motion shall be considered as an amendment or rider to the adoption or approval of the said Recommendation or other portion of a Report.

- (d) That the following new Standing Order be added, to follow present III, 14:

Election of Chairman and Deputy Chairman of Representative Meetings.

Nominations for the office of Chairman of Representative Meetings and Deputy Chairman of Representative Meetings for the year shall be handed in writing to the Secretary of the Meeting not later than the termination of the second day's proceedings. Each nomination shall be signed by the nominator, and shall contain a declaration that the candidate nominated has agreed to serve. The names of all candidates duly nominated shall be included in a voting paper which shall be issued to each voter at such time as the Meeting shall direct. Each voter shall be entitled to vote for one candidate for each office, and the candidate who receives the highest number of votes, being not less than a majority of the total votes given, shall be declared to be elected. In the event of no candidate receiving a clear majority of the votes cast, the candidate who has received the fewest votes shall be excluded, and a second ballot taken upon the names of the remaining candidates, and so on until some candidate receives a clear majority of the votes cast.

C. Annual Report of Council.

(For Annual Report of Council, 1908-9, see p. 277.)

Note.—The Annual Report of the Council is submitted and will be considered for the first time in accordance with the new Standing Orders III, 5, 6, 7, adopted at Sheffield, to which special attention is directed (see page 275).

4. **Motion:** That the Annual Report of the Council to the Representative Meeting be received.

5. **Motion** (By the Chairman): That all Motions by Divisions or Branches which relate to matters dealt with in the Annual Report of Council be considered as amendments or riders to the Recommendations, if any, to which they are relevant, or to the Motion: "That the remainder of the Report under the heading . . . be approved."

6. **Motion:** That paragraphs 1 to 6 of the Annual Report of the Council be approved (pages 277-278).

7. **Motion:** That the Financial Statement and Balance Sheet for the year 1908 be approved (pages 278-286).

8. **Motion:** That paragraph 8 (Estimate of income and expenditure for 1909) be approved (page 279).

9. **Motion:** That paragraph 9 (Apportionment of members' subscriptions) be approved (page 279).

10. **Motion:** That paragraph 10 (the BRITISH MEDICAL JOURNAL) be approved (page 279).

11. **Amendment** by the WATERFORD DIVISION (South-Eastern of Ireland Branch):

That in the opinion of the Representative Meeting the BRITISH MEDICAL JOURNAL should more largely advocate the rights, interests, and claims of the medical masses in the future than it has done in the past.

12. **Motion:** That paragraphs 11 to 13 (Committees, Form of Report, and List of Matters Referred,) be approved (pages 287-288).

CENTRAL ETHICAL COMMITTEE.*Re-publication of Articles in Medical Journals.*

13. **Motion:** That the following Recommendation of the Council be adopted (see Paragraph 15 of Report, page 288):

That it is the professional duty of Medical Authors of articles in Medical Journals to co-operate with the proprietors and editors of those Journals in preventing any improper use of such articles for purposes of advertisements.

14. **Motion:** That the remainder of the Report under the heading "Central Ethical Committee" (paragraphs 14 to 20) be approved (page 288).

CHLOROFORM COMMITTEE.

15. **Motion:** That paragraph 21 of the Report of Council (Chloroform Committee) be approved (page 288)

COLONIAL COMMITTEE.

16. **Motion:** That paragraph 22 of the Report of Council (Colonial Committee) be approved (page 288).

HOSPITALS COMMITTEE.*Certificates of Suitability for Hospital Treatment.*

17. **Motion:** That the following Recommendation of the Council be adopted (paragraph 23 of Report, page 288):

That a medical certificate of suitability for hospital treatment be required as a condition of hospital treatment, except in case of casualties.

18. **Amendment** by the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That except in emergencies a medical certificate of suitability for hospital treatment be required as a condition of hospital treatment

Definition of "Nursing Home."

19. **Motion:** That the following Recommendation be adopted (par. 24 of Report, page 289):

A "Nursing Home" is an institution in which patients are received for medical care under the attendance of medical practitioners selected by themselves, and where the patients are responsible to the home for charges for maintenance and nursing, and to the medical practitioners for their fees.

20. **Motion:** That the remainder of the Report of Council under the heading "Hospitals Committee" (paragraphs 25 to 33 pages 289-290) be approved.

Hampstead Hospital.

21. **Rider** by the WESTMINSTER DIVISION (Metropolitan Counties Branch) (par. 31 of Report, page 289):

That, in the opinion of the Representative Meeting, the Central Council, having permitted the publication of the Warning Notice with reference to the Hampstead Hospital, should secure its observance. Having regard to the fact that an ex-Chairman of a Division of the Association lost his Hospital appointment through compliance with the Notice, while those who defied it were enabled thereby to supplant him, the Representative Meeting instructs the Council to take all steps within the power of the Association to redress the injustice thus occasioned, as its long-continued existence is conducive to the disintegration of the Association.

Representatives at the United Kingdom Hospitals Conference.

22. **Rider** by the WANDSWORTH DIVISION (Metropolitan Counties Branch) (par. 33 of Report, page 290):

That this Representative Body do annually elect twenty-five of its Members, of which not less than three shall be Representatives from Scotland, and not less than three Representatives from Ireland, to represent it at the United Kingdom Hospitals Conference, so long as these Conferences shall continue to be held, together with others to be elected by the Central Council, and that they do report to this Body.

Hospital Administration.

23. **Rider** by the WATERFORD DIVISION (South-Eastern of Ireland Branch):

That the Council be instructed to take steps to give practical effect to the Oxford resolutions on the subject of gratuitous or semi-gratuitous hospital treatment of the well-to-do.

Management of General and Cottage Hospitals.

24. **Rider** by the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That in the opinion of the Representative Meeting, the management of General and Cottage Hospitals should be vested in a Committee on which the local medical profession is adequately represented by directly elected representatives.

Payment for Compensation Certificates.

25. **Rider** by the SALFORD DIVISION (Lancashire and Cheshire Branch):

That, in the opinion of the Representative Meeting, any member of an honorary or paid medical or surgical staff of a hospital who signs any certificate, or gives any report on any case under the Workmen's Compensation Act, ought to receive personally the usual fee in full.

IRISH COMMITTEE.

26. **Motion:** That paragraph 34 of the Report of Council (Irish Committee) be approved (page 290).

JOURNAL AND FINANCE COMMITTEE.

27. **Motion:** That the following Recommendation of the Council be adopted (par. 35 of Report, page 290):

The Council considered the following Resolutions of the Representative Meeting:

Minute 544. That the whole work of the Association be arranged in three co-ordinate Departments: (a) Financial; (b) Editorial; (c) Medical or Professional.

That these Departments be respectively under the following Officers: (a) Financial Secretary; (b) Editor; (c) Medical Secretary, who shall hold equal official positions in the Association.

and gave effect to them by deciding, at the Meeting in October, that the office of the General Secretary and Manager should be known as that of the Financial Secretary as from January 1st, 1909.

Upon consideration of a Memorandum subsequently submitted by Mr. Elliston the Council has come to the conclusion that it is desirable in the interests of the Association that the words "Business Manager" should be added to his title, in order that the duties of the office may be more correctly described.

The Council recommends the Representative Meeting to approve that the title of the office formerly known as that of General Secretary and Manager be henceforth Financial Secretary and Business Manager.

28. **Amendment by the OXFORD DIVISION** (Oxford and Reading Branch):

That Minute 544 of the Annual Representative Meeting, 1908, be rescinded, and that, in view of the practical experience of the last thirty-seven years, during which period the Association has enjoyed great financial prosperity, it has been proved that in the best interests of the British Medical Association it is essential to have an official with the rank and status of "General Secretary and Manager," and that such official should possess special business training. Further, that having regard to the highly satisfactory manner in which Mr. Guy Elliston has discharged the duties since his appointment in 1902, it is in the interests of the Association that his services should be retained as General Secretary and Manager.

29. **Motion:** That the remainder of the Report under the heading Journal and Finance Committee be adopted.

MEDICO-POLITICAL COMMITTEE.

For the following 15 Recommendations see Special Report on Medical Inspection of School Children, etc., SUPPLEMENT, BRITISH MEDICAL JOURNAL, May 15th, 1909.

Employment of Medical Inspectors of School Children under the Guise of Assistant Medical Officers of Health.

30. **Motion:** That the following Recommendation of the Council be adopted.

That, in the opinion of the Representative Meeting, the duties of the office of Assistant Medical Officer of Health, and the general arrangements, should be such as would enable the holder to base a claim for an appointment elsewhere as Medical Officer of Health upon the experience gained in this appointment. It would appear, *prima facie*, that one condition of this should be that he should be the officer not merely of the Education Committee, but also of the Sanitary Committee of the Corporation (*Recommendation A*).

System of Payment of School Medical Officers.

31. **Motion:** That the following Recommendation be adopted:

That the Representative Meeting approve the system of payment of School Medical Officers by fixed salary, or, in the case of part-time officers, payment for time devoted to the work (*Recommendation B*).

* An extract from Part VI of the Finance Inquiry Report, stating the reasons for the change of title recommended by the Committee, and approved in Minute 544 of the Representative Meeting, is reprinted, for convenience of reference, on page 239.

32. **Motion:** That the following Recommendation be adopted:

That, in the opinion of the Representative Meeting, special systems of capitation payment for Medical Inspection, such as those adopted in Hertfordshire and Derbyshire, are satisfactory in sparsely populated districts (*Recommendation C*).

33. **Motion:** That the following Recommendation be adopted:

That, in the opinion of the Representative Meeting, the system of payment per child examined should be opposed by the profession. If for any special reasons it is adopted in any district, the fee should be not less than 2s. 6d. per head (*Recommendation D*).

34. **Motion:** That the following Recommendation be adopted:

That, in the opinion of the Representative Meeting, if it be found desirable to appoint a class of School Medical Officer having supervising as well as inspecting duties, a rate of salary should be fixed above the minimum adopted by the Association for officers engaged in inspection only (*Recommendation E*).

Duties of School Nurse in connexion with Inspection and Treatment.

35. **Motion:** That the following Recommendation be adopted:

That, in inspection, the duty of the School Nurse should be, in the opinion of the Representative Meeting, simply to assist the School Medical Officer (*Recommendation F*).

36. **Motion:** That the following Recommendation be adopted:

That, in treatment, the School Nurse should, in the opinion of the Representative Meeting, act under the instruction and supervision of the practitioner in charge of the patient, and should, as far as possible receive written instructions from him (*Recommendation G*).

37. **Motion:** That the following Recommendation be adopted:

That the duties of the School Nurse should be defined in written rules including the foregoing provisions (*Recommendation H*).

Treatment of School Children Found Defective.

38. **Motion:** That the following Recommendation be adopted:

That the Association should oppose the reference of school children found upon inspection to be defective, to public medical charities for treatment (*Recommendation I*).

39. **Motion:** That the following Recommendation be adopted:

That there is no objection to treatment by provident dispensaries, or other contract practice organizations, of children found upon inspection to be defective, provided that the remuneration of the practitioner is adequate for the work done, and that effect is given to the principles of the Contract Practice Report of the Association (*Recommendation J*).

40. **Motion:** That the following Recommendation be adopted:

That the Association should oppose any scheme of provision for the treatment of school children found upon inspection to be defective which rests on the reference of such children to the Poor Law, pending such reforms as may result from the consideration of the Reports of the Royal Commission (*Recommendation K*).

41. **Motion:** That the following Recommendation be adopted:

That, under existing conditions, the most satisfactory provision for the treatment of school children, found upon inspection to be defective, whose parents cannot afford to pay for such treatment, is by placing them under the care of private practitioners, who should be adequately remunerated out of

public funds without intervention from the Poor Law (*Recommendation L*).

42. **Motion:** That the following Recommendation be adopted:

That, in sparsely populated districts, such provision should be made by the "recognition" of the surgeries of private practitioners as places at which treatment may be obtained at the public expense (*Recommendation M*).

43. **Motion:** That the following Recommendation be adopted:

That, in towns, the work could be similarly entrusted to private practitioners discharging their duties at convenient centres (designated "school clinics") situated in schools or in independent buildings (*Recommendation N*).

Security of Tenure for School Medical Officers.

44. **Motion:** That the following Recommendation be adopted (paragraph 37 of the Report of Council, page 290):

That the Representative Meeting hereby approves the action of the Council in seeking to secure reasonable security of tenure of office for the School Medical Officer and his Assistants (*Recommendation O*).

Representation of the Association on the Central Midwives Board.

45. **Motion:** That the following Recommendation be adopted (paragraph 38 of the Report of Council, page 291):

That the Representative Meeting approves of the action of the Council in endeavouring to secure representation of the British Medical Association on the Central Midwives Board (*Recommendation P*).

Rights and Obligations of Members of Committees and Subcommittees of the Association.

46. **Motion:** That the following Recommendation be adopted (paragraph 39, page 291):

That the Representative Meeting take into consideration the general question of policy which has arisen as to the propriety of a member of a Committee or Subcommittee taking independent action by a letter to the BRITISH MEDICAL JOURNAL with respect to subjects which are under the consideration of the Committee or Subcommittee of which he is a member (*Recommendation Q*).

Representation of the British Medical Association in the House of Lords.

47. **Motion:** That the following Recommendation be adopted (paragraph 40, page 291):

That the Representative Meeting take into consideration the general question of policy raised by a communication received from Earl Wemyss, stating that he proposes to bring before the House of Lords the question of arrangements being made whereby important Bodies representative of those engaged in various professions and businesses may nominate each three members of the House of Lords to represent them officially in questions coming before the House of Lords, the names of such Representatives to be entered on the Journal of the House. Earl Wemyss approaches the British Medical Association as a Body representative of the Medical Profession, and states that the following Bodies have already expressed approval of the idea: The Royal Academy, the Royal Institute of British Architects, the Building Trades Federation of the United Kingdom, the Shipping Federation, and the Employers' Parliamentary Council.

48. **Motion:** That the remainder of the Report of Council under the heading "Medico Political Committee" (paragraphs 41 to 60, pages 291-293) be approved.

Public Medical Service.

49. **Rider** by the ST. PANCRAS AND ISLINGTON DIVISION (Metropolitan Counties Branch):

That the time is now opportune for the British Medical Association to take into consideration the drafting of a scheme for a Public Medical Service, to embrace Philanthropic

Dispensaries and Medical Services, School Clinics, the Poor Law Medical Service, Provident Dispensaries, and the Medical Services of Friendly Societies and Clubs.

Contract Practice.

50. **Rider** by the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That it be an instruction to the Central Council to formulate Resolutions embracing the main principles as affecting Medical Contract Practice.

The Medical Acts.

51. **Rider** by the HEREFORD DIVISION (Worcester and Hereford Branch) (paragraph 55, page 293):

That the Representative Meeting fully concurs with the General Medical Council in being of opinion that the present Medical Acts do not sufficiently enable persons requiring medical aid to distinguish qualified from unqualified practitioners, and that it is contrary to the interest of the public that medical and surgical practice should be carried on with impunity by persons holding no recognized qualifications; and that it be an instruction to the Council to request the Government to take steps for the appointment of a Royal Commission to inquire into the evil effects produced by the unrestricted practice of medicine and surgery by unqualified persons.

NAVAL AND MILITARY COMMITTEE.

52. **Motion:** That paragraph 61 of the Report of Council (page 293) (Naval and Military Committee) be approved.

OPHTHALMIA NEONATORUM COMMITTEE.

53. **Motion:** That paragraph 62 of the Report of Council (page 293) (Ophthalmia Neonatorum Committee) be approved.

ORGANIZATION COMMITTEE.

54. **Motion:** That consideration of the Recommendations of the Council (paragraph 64 of Annual Report, page 293) as to alteration of the By-laws affecting Standing Committees, and the composition of the Council, respectively, be postponed until consideration of Section F of the Agenda.

55. **Motion:** That the remainder of the Report of the Council under the heading "Organization Committee" (paragraphs 63 to 69, pages 293-4) be approved.

Method of Distribution of Capitation Grants.

56. **Amendment** (arising out of paragraph 66 of the Report, page 294) by the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That in view of the facts (1) that the policy of the Association is to consider the Division as the primary unit, each Division being free to govern itself in such a manner as it shall think fit; (2) that the decision as to what additional subjects shall be forwarded to the Divisions for consideration rests with the Representative Body and the Central Council, and not the Branch Councils; this Representative Body considers that it is illogical any longer to place in the hands of Branch Councils the funds for distribution to the Divisions, while at the same time depriving them of any control over the objects for which the money is used, and instructs the Central Council to so amend the By-laws as to place the distribution in the hands of the Central Council, which can make capitation grants to all Divisions and Branch Councils as may be required.

PREMISES COMMITTEE.

57. **Motion:** That paragraph 70 (page 294) of the Report of Council (Premises Committee) be approved.

PUBLIC HEALTH COMMITTEE.

58. **Motion:** That paragraphs 71 to 77 (pages 295-6) of the Report of Council (Public Health Committee) be approved.

SCIENCE COMMITTEE.

59. **Motion:** That paragraphs 78 to 81 (page 296) of the Report of Council (Science Committee) be approved.

Scientific Work of the Association.

60. **Rider** by the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That, with a view to further interesting Divisions and Branches in the Section work of the Annual Meeting, it be an instruction to the Central Council to encourage them to nominate one or more members to take part in the discussions of any subject arranged for, which has previously been considered by the Division or Branch.

SCOTTISH COMMITTEE.

61. **Motion:** That paragraph 82 (page 296) of the Report of Council (Scottish Committee) be approved.

THERAPEUTIC COMMITTEE.

62. **Motion:** That paragraph 83 (page 297) of the Report of Council (Therapeutic Committee) be approved.

Appointment of Materia Medica Committee.

63. **Rider** by the WATERFORD DIVISION (South-Eastern of Ireland Branch):

That the Council be requested to appoint a Materia Medica Committee, whose duty it will be, with such professional aid as they can summon to their assistance, to investigate and pronounce on the uses and properties of all drugs which shall be used by the profession, and that in view of the grave injury inflicted on the public and on the profession alike by the present wholesale introduction of drugs by mere commercial firms, whereby the ground is being cut from under our feet, and the gullible public are induced to accept nostrums on the sole strength of mere assertions, that the hospitality of our museum and the pages of our JOURNAL shall be both shut out from giving any further aid to the wholesale advertisements of drugs and preparations, the sole virtues of which have too often no existence save in the mendacity of their introducers.

UTERINE CANCER COMMITTEE.

64. **Motion:** That paragraph 84 (page 297) of the Report of Council (Uterine Cancer Committee) be approved.

GENERAL APPROVAL OF ANNUAL REPORT.

65. **Motion:** That, subject to the Amendments and other Resolutions adopted by the Meeting with reference thereto, the Annual Report of Council be approved as a whole.

D. Financial Estimate for 1909.

Receive: Financial estimate submitted by the Council under By-law 35, and consider motions relating thereto.

E. Special Reports of Council (if any).

F. Motions to Make, Alter, or Repeal By-laws.

Consider: Motions placed upon the Agenda of the Meeting by which it is proposed to make new By-laws or alter or repeal existing By-laws.

PROPOSED AMENDMENTS OF EXISTING BY-LAWS.

Mode of Election of Council.

66. **Motion** by the COUNCIL:

That the present By-laws of the Association, numbered 23 to 32 inclusive, relative to the composition and mode of election of Council be rescinded, and the corresponding By-laws, numbered 37 to 46 inclusive, in the Schedule to the Draft Charter, be adopted in substitution thereof, subject to such verbal amendments and alterations as the legal advisers of the Association may deem to be necessary. (SUPPLEMENT, April 24th.)

67. **Motion:** By the DUNDEE BRANCH:

That the present By-laws relating to the Council, namely, 23 et seq., be amended by substituting for them the provisions of the Schedule to the Draft Charter, namely, Section VI, subject to such verbal amendments as in the opinion of the Association's legal advisers are necessary to bring them into harmony with the present Memorandum and Articles. (SUPPLEMENT, April 24th.)

68. **Motion:** By the GATESHEAD DIVISION (North of England Branch):

That having regard to the repeated decisions of the Representative Meeting, confirmed by a large majority upon the Referendum, that the mode of election of the Council should be altered so as to provide for the reduction of the total membership of, and some representation of the Representative Meeting on, the Council, the present By-laws of the Association as to the composition and mode of election of the Council be amended so as to conform with those on the same subject appended to the Draft Charter submitted to the Privy Council. (SUPPLEMENT, April 24th.)

(For convenience of reference the present By-laws 23 to 36 and Section VI of Draft Charter are printed on pages 297-8.)

Standing Committees.

69. **Motion:** By the COUNCIL:

That the Schedule to the present By-laws of the Association as to Standing Committees be amended by making such verbal changes as are necessary to bring it into conformity with the corresponding Schedule appended to the Draft Charter. (SUPPLEMENT, April 24th.)

(For the Schedules referred to see pages 300-305.)

G. Motions relating to the Honour and Interests of the Medical Profession or of the Association

(Not Arising out of Consideration of Report of Council).

Consider: Motions placed upon the Agenda of the Meeting by Divisions and Branches relating to the honour and interests of the medical profession or of the Association.

Medical Teaching.

70. **Motion:** By the WATERFORD DIVISION (South-Eastern of Ireland Branch):

That in the opinion of the Representative Meeting it is contrary to the interests of the profession that the mass of the profession, and even the majority of members of hospital staffs, should be excluded, as at present, from all share in medical teaching.

Medical Examinations.

71. **Motion:** By the WATERFORD DIVISION (South-Eastern of Ireland Branch):

That in the opinion of the Representative Meeting all medical examinations ought to be duly advertised, and open to the presence of every registered medical practitioner.

Promulgation of Policy of the Association.

72. **Motion:** By the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That it be an instruction to the Central Council to investigate and report as to the best means for bringing before the Members those conclusions of this Representative Body arrived at from time to time which define the policy of the Association, with a view to their general acceptance and adoption throughout the Association.

Federated Societies Medical Benefit Association.

73. **Motion:** By the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That in the opinion of the Representative Meeting Members of the British Medical Association should refuse to support the proposed Federated Societies Medical Benefit Association, since its regulations contravene the conditions which the Association has approved for the conduct of Contract Practice.

Instruction in Hygiene.

74. **Motion:** By the SOUTH-EASTERN OF IRELAND BRANCH:
That, in view of the large sums of public money paid to those who give technical instruction in agriculture and various trades, of the cost to the community of the maintenance of hospitals and sanatoria for the treatment and cure of disease, much of which is preventable, and of the recognition by the Legislature of public health lectures as a part of technical education, qualified for a share in the local grants, the services of members of the medical profession in giving instruction in hygiene should no longer be treated as a matter of philanthropy; that medical practitioners should not lecture gratuitously for philanthropic societies such as the Women's National Health Association, which, while deserving of sympathy and encouragement, afford by their existence evidence of the neglect by the Government, central and local, in matters of sanitation and public health; but that such societies should co-operate with the county councils in the selection of lecturers who should be remunerated in part at least from public funds.

Amendments to Draft Charter.

(Motions postponed by Annual Representative Meeting, 1908).

Election of Representatives.

75. **Motion:** By the LIVERPOOL (WESTERN) DIVISION (Lancashire and Cheshire Branch):

That in By-law 25 (1) the words "each such Constituency being entitled to elect one Representative," be deleted.

76. **Motion:** By the LIVERPOOL (WESTERN) DIVISION (Lancashire and Cheshire Branch):

That in By-law 25 (2), for the first word of line 2, "one," substitute "a," and after the word "Constituency" insert the words "to elect one Member"; at the end add the words "Any Division having more than 50 Members may elect another additional Representative for every complete 50 (75, 100, or other number) additional Members."

By-law 25, Draft Charter, is as follows:

REPRESENTATIVE BODY.

Formation of Constituencies.—25. (1) Representatives of Divisions shall be elected by Constituencies formed as follows, each such Constituency being entitled to elect one Representative. (2) Any Division having not less than fifty members may form one Constituency, and except as hereinafter provided every Division having less than fifty members shall be grouped by the Council with another Division, or with other Divisions, to form a Constituency having not less than fifty members. (3) Provided that the Council shall have power to give separate representation to Divisions having fewer than fifty members in those cases in which it appears to the Council that special difficulties exist as to the holding of joint meetings with neighbouring Divisions. (4) In no case shall the total number of Constituencies formed throughout the Association exceed 300. (5) Subject as aforesaid the Constituencies shall be formed and may be from time to time altered by the Council, and the Council shall publish lists of the Constituencies as and when it may think expedient.

H. Election of Officers.

Elect a Chairman of Representative Meetings and a Deputy Chairman of Representative Meetings for the year 1909-1910.

I. Election of Committees.

Elect members of the Medico-Political and Central Ethical Committees, and other Committees, if any.

J. Standing Orders.

Consider proposed amendments of Standing Orders, other than those relating to the order of business.

K. Any other business.**L. Confirm Minutes.**

By Order,

J. SMITH WHITAKER,

Medical Secretary.

STANDING ORDERS*RELATIVE TO***BUSINESS AT REPRESENTATIVE MEETINGS**

(As adopted at Sheffield, 1908).

I.—ORDER OF BUSINESS.*(A) Annual Representative Meeting.*

1. Except as may be otherwise determined in the manner prescribed by the Standing Orders, the order of business shall be as follows:

- i. **Election Returns.**—Receive the return of the Election of Representatives of Divisions for the year, and receive notices, if any, of the appointment of substitutes for Representatives under Article XXX.
- ii. **Standing Orders.**—Adopt Standing Orders.
- iii. **Annual Report of Council.**—Receive the Annual Report of the Council, presented under By-law 35, and consider motions relating to the adoption thereof in whole or in part.
- iv. **Financial Estimate.**—Receive the Financial Estimate presented by the Council under By-law 35, and consider motions relating to the adoption thereof in whole or in part.
- v. **Special Reports of Council.**—Receive Special Reports of the Council, if any, in the order in which the Council shall submit them for consideration, and consider motions for the adoption thereof in whole or in part.
- vi. **Report of Medico-Political Committee.**—Receive the Report of the Medico-Political Committee, and consider motions for the adoption of the same in whole or in part.
- vii. **Report of Ethical Committee.**—Receive the Report of the Ethical Committee, and consider motions for the adoption of the same in whole or in part.
- viii. **Reports of other Committees (if any).**—Receive Reports of other Committees, if any, and consider motions for the adoption of the same in whole or in part.
- ix. **Consider By-laws.**—Consider, in such order as the Meeting shall determine, any motions placed upon the Agenda of the Meeting by which it is proposed to make By-laws or to alter or repeal existing By-laws.
- x. **Consider other Motions by Divisions or Branches.**—Consider, in such order as the Meeting shall determine, any motions placed upon the Agenda of the Meeting by Divisions or Branches, relating to the honour and interests of the Medical Profession or of the Association.
- xi. **Election of Officers.**—Elect a Chairman of Representative Meetings and a Deputy-Chairman of Representative Meetings for the year.
- xii. **Election of Members of Medico-Political and Ethical Committees.**—Elect at such time before the conclusion of the third day's proceedings, as the Chairman may, pursuant to Standing Order III, 10, prescribe:
 - (a) Six Members of the Association to serve on the Medico-Political Committee for the ensuing year.
 - (b) Five Members of the Association to serve on the Ethical Committee for the ensuing year.
 - (c) Such members of other Committees, if any, as it falls to the Representative Meeting to elect.
- xiii. **Amendment of Standing Orders.**—Consider proposed amendments of Standing Orders, other than those relating to the order of business.

2. General Order of Daily Sessions: Confirmation of Minutes.—The matters described in Clause 1 shall be considered in the order therein prescribed, or as otherwise duly determined, from day to day until the completion thereof or until the expiration of four days from the first day of the Meeting, whichever shall first occur; provided that at each daily session after the first, the Meeting shall, before proceeding to the consideration of the matters aforesaid, (A) confirm the Minutes of the Proceedings of the previous daily session; (B) consider motions, if any, relating to the order of business of the day. At the conclusion of the business of the last daily session the Meeting shall confirm the Minutes thereof for presentation to the Council.

3. Hours of Daily Sessions.—All Representative Meetings not concluded by 6.30 p.m. shall stand adjourned either to 8 p.m. of the same day, or to the next day, as may be decided by a show of hands. All such Meetings shall stand adjourned at 10 p.m.

4. Varying Order of Business.—The order of business may be varied, either at the commencement or after the expiration of two hours from the commencement of any daily session, by the vote of two-thirds of those present and voting.

5. Precedence of Motions of which Notice Given.—Motions and amendments of which notice shall have been given to the Secretary of the Meeting in time for them to be circulated with the Minutes of the previous day's proceedings, shall have precedence, in the order in which such notice shall have been given, over those relating to the same subject, or otherwise having a like claim to precedence in the order of business, of which such notice has not been given.

6. Motions on the Same Subject.—If two or more of the motions placed on the Agenda of the Meeting by the Council and by Divisions and Branches shall appear to the Chairman to relate to the same subject he shall ascertain the will of the Meeting in respect of the consideration of one of such motions as an original motion, and of the others as amendments thereto, in such order as the Meeting may determine.

7. Motions on Subjects dealt with in Reports.—If a recommendation of the Council or of a Committee, or an amendment moved that a specified portion of a Report of the Council or of a Committee be not approved, shall appear to the Chairman to relate to the same subject as a motion placed upon the Agenda by the Council or by a Division or Branch, the Chairman shall ascertain the will of the Meeting as to the consideration of the said motion as an amendment to the adoption of the said recommendation, or to the approval of the said Report.

8. Resolutions Involving Special Expenditure.—Every Resolution involving special expenditure shall, before final adoption by the Representative Meeting, be remitted to the Finance Committee for report to a later Session.

(B).—*Special Representative Meetings.*

1. Read Authority for Convening Meeting.—Read the Resolution of Council, or the requisition from Divisions, in pursuance of which the Meeting is convened.

2. Notice of Substitutes.—Receive notices, if any, of the appointment of substitutes for Representatives.

3. Order of Business.—If the Meeting is convened to consider more than one matter, determine the order in which such matters shall be considered.

4. Special Business.—Consider the matters which the Meeting is specifically convened to consider, in order determined by the Meeting.

5. Minutes.—Confirm the minutes of the Meeting for presentation to the Council.

II.—COMPOSITION AND ARRANGEMENT OF THE MEETING.

1. Composition.—The persons constituting the Meeting, hereinafter called members of the Meeting, shall be those duly elected Representatives of Divisions, or substitutes

duly appointed under Article XXX and By-law 19. of whose election or appointment the General Secretary shall have received due notice, together with Members of Council for the time being.

2. Arrangement.—Distinctive seats shall be provided for the following groups of persons respectively, namely:

(A) Representatives of Divisions.

(B) Members of Council who are not Representatives of Divisions or Officers of the Association.

(C) Officers of the Association, present in virtue of their office, or at the request of the Meeting, for the assistance thereof.

(D) Members of the Association who are not Representatives of Divisions or Members of Council.

(E) Reporters representing such journals as may be authorized by the Chairman, subject to the approval of the Meeting.

3. Withdrawal of Strangers.—It shall be competent at any time for a member of the Meeting to move that persons who are not members of the Meeting be requested to withdraw, or that persons who are not members of the Association be requested to withdraw, but it shall rest in the discretion of the Chairman to submit or not to submit such motion to the Meeting.

III.—PROCEDURE.

1. Temporary Chairman.—In the absence of the Chairman of Representative Meetings, the Deputy-Chairman shall preside; or, if he be also absent, the Chairman of Council or the Treasurer, if present, shall take the chair, and call upon the Meeting to appoint a temporary Chairman.

2. Minutes.—Minutes shall be taken of the proceedings of the Meeting, and the same shall be duly entered in a book provided for the purpose. The Minutes of each daily session of the Annual Representative Meeting shall be printed and circulated to the members of the Meeting. Minutes (if) (when) printed in the Daily Journal of the Annual Meeting shall be deemed thereby to have been circulated as required by this order.

3. Attendance.—No Representative shall leave the Meeting without permission obtained personally from the Chairman at the time of leaving. If during any daily session of a Representative Meeting it shall at any time appear to the Chairman that a quorum is not present, the roll shall be called of Representatives appointed to attend the Meeting, and those Representatives who are found to be then absent, not having previously obtained leave from the Chairman, shall be deemed to have been absent from the said session. A list of members reported as absent from any daily session or sessions of a Representative Meeting shall be supplied at the close of such Meeting to the Chairman and shall by him be transmitted to the Council, together with such explanations of the cause of absence as any members so reported may have furnished to him in writing.

***4. Reports: Notice.**—Subject as hereinbefore provided, no Report by the Council, or by a Committee, to the Representative Meeting shall be considered by the Meeting unless it shall have been sent to the Divisions and published in the JOURNAL at least one month before such Meeting. The exceptions to this rule shall be—

(A) That the Council, and such Standing Committees, if any, as report direct to the Representative Meeting shall submit, in addition to their Annual Report, a Supplementary Report dealing with those matters of importance, arising subsequent to the issue of the Annual Report of the Council, or of such Committee, to the Representative Meeting, in which action has been taken, or action by the Representative Meeting is recommended.

* NOTE.—These Standing Orders were adopted to take effect from the close of the Annual Representative Meeting at Sheffield.

- (b) That any Special Committee appointed by the Representative Meeting shall report in accordance with the terms of the instructions given to such Committee by the Meeting.

*5. **Form of Reports.**—Reports of Council and Reports, if any, of Standing Committees, to the Representative Meeting shall comprise the following:—

- (A) A list of matters referred by the Representative Meeting to the Council or Committee.
- (B) Reports with specific recommendations upon all matters in which the Council or Committee considers that action should be taken involving a new declaration of policy or expenditure not already authorised.
- (C) A short report of all action taken by the Council or Committee in accordance with instructions of the Meeting.
- (D) A list of matters under consideration but not completed.

*6. **Presentation of Reports.**—The report of the Council or of a Committee shall be presented by the Chairman, or, in his absence, by a member, of the body submitting such Report, who shall move—

- (1) That the Report be received.
- (2) That the Recommendations, if any, be adopted.
- (3) That the rest of the Report be approved.

The adoption of each recommendation shall be the subject of a separate motion. The approval of the rest of the Report shall be moved as a whole, unless the Chairman rule or the Meeting resolve that the approval of each paragraph, or of any specified paragraph, be the subject of a separate motion.

*7. **Amendments and Riders.**—

- (1) To a motion that the Report be received, no amendment shall be moved.
- (2) To a motion that a Recommendation be adopted, amendments may be moved.
- (3) To a motion that a Report, or a specified paragraph of a Report, be approved, an amendment may be moved to the effect that the Meeting do disagree with, or do refer back to the Committee, any specified portion thereof, or that with reference thereto the meeting do express an opinion in terms state¹.

8. **Procedure as to Other Motions.**—Motions placed on the Agenda of the Meeting by the Council shall be brought before the Meeting by the Chairman of Council if present, motions so placed by a Branch shall be introduced by a member of Council elected by the Branch, and motions so placed by a Division shall be introduced by the Representative thereof.

9. **Absence of Authorized Mover of Adoption of Report or Other Motion.**—In the absence of any member authorized to make any motion referred to in Standing Orders III, 6 and 8, any other member deputed by such member may make such motion on his behalf, and if no member shall have been so deputed, such motion shall be made formally by the Chairman.

10. **Seconding Motions.**—No seconder shall be required for any of the motions referred to in Standing Orders III, 6 and 8. All other motions and all amendments shall be required to be moved and seconded.

11. **References to Central Executive.**—Each motion or amendment which is of the nature of an instruction or reference to any central executive body, other than a Committee specially appointed by the Representative Meeting, shall be moved in the form of an instruction or a reference to the Council.

12. **Rescission of Resolutions.**—No motion to rescind any resolution of a Representative Meeting, arrived at after due consideration of the Divisions, shall be in order at any subsequent Representative Meeting, unless at least two months' notice of such proposed motion shall have been given to the Divisions through the SUPPLEMENT to the JOURNAL.

13. **Time Limits of Speeches.**—(A) A member of the Meeting shall be allowed to speak for fifteen minutes in moving a resolution which does not require seconding, and for ten minutes in moving any other resolution, or any amendment. Except as aforesaid, no speech shall exceed five minutes.

Reducing Time Limit.—(B) The Meeting may at any period of any session reduce the time to be allowed to speakers, whether in moving resolutions or otherwise, during the remainder of such session.

14. **Mode of Voting—Show of Hands.**—Only Representatives of Divisions shall vote on any question before the Meeting.

Voting shall be by show of hands, except in the cases following, namely:

Vote by Card.—(A) If upon the Chairman proceeding to take the vote of the meeting upon any motion or amendment, any Representative of a Division shall move that the said vote be taken by card, and twenty Representatives rise in their places in support of such motion, the vote shall be taken by card, and the names of those voting for and against such motion or amendment, of those not voting, and of the Constituencies which they severally represent, shall be entered on the Minutes.

Division.—(B) If the Chairman, after taking a vote by show of hands upon any motion or amendment, shall be of opinion that the numbers of members voting for and against such motion or amendment are not thereby ascertained with sufficient accuracy, he shall have power to direct that the Meeting shall divide upon the said motion or amendment.

15. **Election of Committees.**—Nominations for election by the Representative Meeting of members of Standing Committees shall be handed in writing to the Secretary of the Meeting not later than the termination of the second day's proceedings. Each nomination shall be signed by the nominator and shall contain a declaration that the candidate nominated has agreed to serve. No member shall be eligible for nomination who having been a member of a Standing Committee during the previous year shall have failed to attend at least half the meetings of the Committee for that year. The names of all candidates duly nominated shall be included in a voting paper issued to each voter, and shall be arranged in three lists, one of those residing in England and Wales, one of those residing in Scotland, and one of those residing in Ireland. Each voter shall be entitled to vote for not more candidates than there are members to be elected, and of these not more than two-thirds of the total number shall be those of candidates in the English list, not more than one-fourth in the Scottish list, and not more than one-fourth in the Irish list. In counting the votes the candidates on the English list who have obtained the highest number of votes, being not more than one-half of the total number of members to be elected, the candidates on the Scottish list who have obtained the highest number of votes, being not more than one-fourth of the total number to be elected, and the candidates on the Irish list who have obtained the highest number of votes, being not more than one-fourth of the total number to be elected, shall be deemed to be elected. If any place on the Committee be still vacant, that candidate or those candidates shall be deemed to be elected who shall have obtained the highest number of votes, irrespective of the list in which the name of any such candidate appears. Scrutineers to conduct the election shall be nominated by the Chairman, and the details of the voting shall be placed before and verified by the Chairman before being declared to the Meeting.

¹ See Footnote, p. 275.

IV.—RULES OF DEBATE.

1. Every member shall be seated except the one who may be addressing the Meeting, and when the Chairman rises no one shall continue standing, nor shall any one rise until the Chair is resumed.

2. A member of the Meeting shall stand when speaking, and shall address the Chair.

3. A member who speaks shall direct his speech strictly to the motion under discussion, or to a motion or amendment to be proposed by himself, or to a question of order.

4. A member shall not address the Meeting more than once on any motion or amendment, but the mover of an original resolution may reply, and in his reply shall strictly confine himself to answering previous speakers, and shall not introduce any new matter into the debate; provided always that a Member may speak to a point of order, or, by consent of the Meeting, in explanation of some material part of a speech made by him, which he believes to have been misunderstood.

5. A motion or amendment once made and seconded shall not be altered or withdrawn without the consent of the Meeting.

6. An amendment shall be either—

To leave out words;

To leave out words and insert or add others;

To insert or add words;

or in such form as shall be approved of by the Chairman, provided always that the amendment be relevant to the motion on which it is moved, and be not equivalent to the direct negative thereof.

7. No notice of motion, or amendment to any motion before the Meeting, not already published, shall be considered by the Meeting until a copy of the same with the name of the proposer has been handed in in writing to the Chairman.

8. Whenever an amendment upon an original motion has been moved and seconded no second or subsequent amendment shall be moved until the first amendment shall have been disposed of, but notice of any number of amendments may be given.

9. If any amendment be rejected, other amendments may be moved on the original motion. If an amendment be carried, the amendment or motion as amended shall take the place of the original motion, and shall become the question upon which any farther amendment may be moved.

10. If it be proposed and seconded that the Meeting do now adjourn, or that the debate be adjourned, or that the Meeting do proceed to the next business, or that the question be now put, such motion shall immediately be put to the vote without discussion, except as to the time of adjournment, provided always that the Chairman shall have power to decline to put to the Meeting the motions that the Meeting do proceed to the next business, or that the question be now put.

11. A motion that the Meeting do now adjourn, or that the Meeting do now proceed to the next business, or that the debate be now adjourned, or that the question be now put, shall not be made within a period of one hour after a previous motion to the like effect, unless, in the opinion of the Chairman, the circumstances are materially altered.

12. Smoking shall not be allowed during such time as the Chairman is in the Chair.

V.—SUSPENSION OF STANDING ORDERS.

Any one or more of the Standing Orders, in any case of urgency, or upon motion made on notice given through the Daily Journal, may be suspended at any Meeting, so far as regards any business of such Meeting, provided that three-fourths of those present and voting shall so decide.

SUPP. 2

REPORT OF COUNCIL, 1908-9.

On the occasion of the Seventy-seventh Annual Meeting, your Council is able to congratulate the Association on the completion of the re-building of its Central Premises.

Owing to the foresight and prudence of those in the past, who worked so long and consistently to husband and consolidate the finances, it has been possible to build a Home worthy of the traditions of the Association, and thus secure a resort for members visiting London from all parts of the Empire.

At the first meeting of the Council in the new Council Chamber, the hope was expressed from the Chair, that under Divine guidance the British Medical Association might grow in wisdom and in strength, and that the deliberations and aims of the Association might make for the scientific advancement of the Medical Profession, for the honour and welfare of those who practise it, and for the health and happiness of all those throughout the British Empire who might be under its professional care.

THE BELFAST MEETING.

(1) Your Council has every reason to believe that the Belfast Meeting will afford Members much of interest, while those who attend are assured of a warm welcome.

Fifteen Sections are being organised for the scientific business of the meeting. Dr. R. W. Philip, Physician to the Royal Infirmary, Edinburgh, has accepted the invitation to give the Address in Medicine; Mr. A. E. Barker, Professor of Principles and Practice of Surgery, University College, London, the Address in Surgery, and Sir John Byers, Professor of Diseases of Women, Queen's College, Belfast, the Address in Obstetrics. The Popular Lecture will be given by Dr. J. A. Macdonald of Taunton, Chairman of Representative Meetings.

THE SHEFFIELD MEETING.

(2) Your Council cannot miss the opportunity of expressing on behalf of the Association its thanks to all those who worked so devotedly for the success of the Sheffield Meeting. The arrangements for the housing of the Sections in the magnificent University building were most complete, while the generous hospitality will for long be remembered by all Members who visited Sheffield.

DEATH OF THE PRESIDENT.

(3) It is with profound regret that your Council reports the death of the President of the Association, Mr. Simeon Snell. Not since the death of Sir Russell Reynolds, Bart., in 1896, has the Association had the misfortune to lose its President during his year of Office. A large and representative gathering assembled for the funeral at Sheffield, and your Council has conveyed to Mrs. Snell its appreciation of the work Mr. Snell accomplished during his strenuous life, and its sincere sympathy with her and family in their great bereavement.

DEATHS OF MEMBERS.

(4) Each year the Council has the melancholy duty to record the loss by death of many Members. Since the last Annual Meeting, the Association has lost, in addition to its President, three past presidents, Sir John Banks, K.C.B., who presided at the Dublin Meeting in 1887, Dr. W. A. Elliston, at the Ipswich Meeting in 1900, and Mr. C. G. Wheelhouse, at the Leeds Meeting in 1889. Also, Mr. George Eastes, for many years a Representative of the Metropolitan Counties Branch on the Central Council, and Dr. W. H. De Silva, a Representative of the Colombo Ceylon Branch.

The Council regrets also to report the death of Dr. Bertram L. Abrahams; Dr. Fredk. Henry Alderson; Mr. Robert Allen; Dr. John Archibald; Dr. Henry Ashby; Dr. Donald Harvey Atfield; Dr. Charles Ernest Baker; Mr. Harold Leslie Barnard; Dr. James Wm. Barrack; Dr. Charles Edward Beever; Lieut.-Col. Edward Bovill, M.D., I.M.S.; Dr. William Bowen-Davies, a Past President of the Shropshire and Mid Wales Branch; Dr. Sydney Shakspeare Broadbent; Sir Charles Gage Brown, K.C.M.G.; Dr. John F. Cullen Brown; Dr. Walter Brown; Mr. John Burns; Dr. D. T. Cadvan-Jones; Dr. Alan Eskridge Carruthers; Lieut. John Catto, I.M.S.; Dr. John Clague; Mr. Henry E. Clark, C.M.G.; Dr. John Brightman Copland; Dr. Charles Coppinger; Mr. Frederick S. Cowan; Dr. C. J. Cullingworth,

delivered the Address in Obstetrics and Gynaecology at the Newcastle Meeting in 1893; Dr. John Dewar; Dr. George Dickson; Dr. Thomas Orme Dunfield; Dr. Theodore Duka; Dr. Douglas John Dutton; Dr. Thomas Easton; Dr. Emily E. Eberle; Mr. E. W. Emtage; Dr. Thomas Evans; Sir Thomas Naghten Fitzgerald, C.B.; Surg.-Gen. Thomas William Fox; Dr. Samuel Griffith, Hon. Treasurer, North Wales Branch; Dr. Griffith Griffiths; Dr. George Halley; Professor David James Hamilton, F.R.S.; Surg.-Gen. Sir James Arthur Hanbury, K.C.B.; Dr. James Hardie; Capt. Frederick Hallam Hardy, R.A.M.C.; Mr. T. V. P. Hartigan; Mr. E. W. Henfrey; Mr. Matthew James Hewetson; Mr. John D. Hillis, Chairman East Leinster Division; Surg.-Major Thomas Holmested, I.M.S.; Dr. Alton Kingsley Holts; Mr. Thomas Garrett Horder, Member of Hospitals Committee; Dr. Peter Horrocks; Mr. James Brierley Hughes, the first Chairman of the East Cheshire Division; Mr. Joseph Henry Irvin; Dr. Arthur M'lyneux Jackson; Dr. Richard Arnold Johnston; Dr. John Talfourd Jones, President South Wales Branch, 1877; Dr. J. Hurd Keeling; Mr. John Kershaw; Lieut. Hubert Astley Knight, I.M.S.; Dr. Charles Knott; Dr. Alex. D. H. Leadman; Dr. Henry Collier Lecky; Dr. George Lorimer; Sir Arthur Vernon Macan, at one time President, Royal College Physicians, Ireland; Dr. Dove McCahman; Dr. Alex. Macdonald; Dr. William Mackie; Mr. S. B. G. McKinney; Dr. Hugh M. Montgomery, President, South Western Branch; Mr. Henry Cecil Moore, a former Hon. Secretary and Treasurer of the Worcestershire and Herefordshire Branch; Dr. J. J. Murphy; Dr. Alfred Robert Nicholls; Dr. John Tawse Nisbet; Dr. James Black Noble; Dr. Thomas Carlyle Parkinson; Mr. Edward Percy Paton; Dr. Edith Pechey-Phipson; Lt. Col. Francis Samuel Peck, I.M.S.; Dr. Robert Pollok; Dr. Henry J. Pringley, for several years Hon. Sec. of the Northwood Division; Dr. Frank Utten Purchas; Dr. Prior Purvis; Dr. Edwin Rickards, who held office as Secretary, Treasurer, and President of the Birmingham and Midland Counties Branch; Dr. A. G. Kider; Dr. J. J. Ridge; Dr. Argyll Robertson, formerly President of the Edinburgh Branch; Dr. John Robertson; Surg. Lt.-Col. Thomas Robinson, I.M.S.; Dr. Charles Henry Felix Routh; Dr. Roderick Sim; Dr. A. C. Festing Smith; Dr. Patrick Blaikie Smith; Mr. Alfred Temple Spanton; Mr. A. J. Balmano Squire; Dr. Samuel Hopkin Steel; Sir Thomas Stevenson; Mr. John Stewart; Mr. Michael Strahan; Brig.-Surg. George Sackville Sutherland; Dr. David Thompson, late President of the South Western Branch; Mr. Frederick Howard Tinker; Dr. John Cooper Torry; Mr. Basil Riddell Trevelyan Trevelyan; Mr. Wm. Knight Treves; Surg. Maj. Thomas John Tucker; Lt.-Col. Tuohy, I.M.S.; Dr. Charles Edward Underhill, for several years Secretary, and late President, of the Edinburgh Branch; Mr. George Edward Walker; Dr. George Watt; Dr. Frederick Wilson; Dr. Reginald Robert Wishaw; Dr. William Thomas Garrett Woodforde, late President of the Reading Branch; and Dr. G. P. M. Woodward.

MEMBERSHIP OF THE ASSOCIATION.

(5) On the 31st December, 1908, the total Membership of the Association was 21,163, a net increase of 39 over the corresponding date of the previous year. The withdrawals from membership in the year 1907 were somewhat abnormal, so for comparison the detailed figures of the three past years are recited:—

	1906.	1907.	1908.
New Members ...	2,171	1,527	1,023
Resignations ...	485	1,050	584
In arrears with Subscriptions ...	192	116	153
Deaths ...	225	227	244
Expulsion ...	2	2	3
Removed from Medical Register ...	1	-	0
	905	1,396	984
Net Increase ...	1,266	131	39

Your Council regrets in view of all the Association is endeavouring to accomplish on behalf of the Medical Profession that the increase in the membership has not been more marked.

MEDICAL BENEVOLENT INSTITUTIONS.

(6) During the year ending 31st December, 1908, a total sum of £1,014 was received through the office of the Association on behalf of the British Medical Benevolent, the Epsom College, and the Irish Benevolent Funds. Your Council takes the opportunity of appealing to Members to provide increased financial support to these deserving charities.

THE FINANCIAL STATEMENT, 1908.

(7) The Financial Statement for the year ending 31st December, 1908, demonstrates that the demands on the financial resources of the Association are undiminished.

Taking the Balance Sheet, the Liabilities, other than the loan from the Bank for the re-building of the central premises, are less by some £150 than in 1907, while it is satisfactory to note no overdraft appears on the current account. Of the Assets, less subscriptions are outstanding, but £250 more for advertisements remain to be collected. The Plant and Type stands in the books at a higher figure by £500, due to large additions during the year, while the cash at the Bank was £500 more than at the close of 1907. Of the Investments, the properties in the Strand remain at the same figure, while the Bank of England and Midland Railway Stocks are valued at their market price on the 31st December last.

The Profit and Loss Account.

Of the various heads of expenditure full details of which are recited under their respective schedules, the collected increases represent nearly £1,600. In addition, owing to the re-building of the Central Premises it has been considered prudent to write off an additional £250 from the old furniture and fittings. Of the Investments it has not been necessary to write off as much as in 1907, but as it is, the Association, in common with many similar bodies, has to recognise a further shrinkage in first class securities. After making allowance for such depreciation, there is left on the year's working £732 to carry to reserve. In doing this no provision has been made out of the current revenue for interest on the loan from the Bank for the new premises. In the opinion of your Auditors, while re-building was in operation such a charge might fairly be deducted from surplus, in future any such charge must be met from current revenue.

In examining the Receipts, Subscriptions have increased by nearly £100, while the Journal Account shows an increase of £1,000. The return from Investments and Rents shows a drop. Rents were nil, while little interest on current revenue was made, all available cash being used to relieve the new premises account. By so doing the new premises account was saved some £130 in the way of interest.

The Stocks produced the same return as in former years.

General Association Expenses (Abstract A).

Legal expenses are £140 less: but it will be remembered these were heavy in 1907. This decrease practically balances against the grant of £150 to the Contract Practice Committee of South Wales and Monmouthshire Branch.

Central Meeting Expenses (Abstract B).

The production of the Daily Journal at Sheffield cost more, being influenced by the larger attendance of Members. The Representative Meeting railway fares show £300 less, but in 1907 there was the additional Special Meeting. The printing shows an increase of £270. This was particularly heavy at Sheffield, and in addition is included the printing of the Exeter Minutes, which, owing to delay, were not ready in 1907. The Council expenses show a small decrease. The item of £29 for railway fares of Branch and Division Secretaries for attendance at the Secretaries Conference appears for the first time.

Committees (Abstract C).

Committee expenditure reached a sum of over £1,900, an increase in round figures of £300; the details of each Committee are shown in the Abstract E. The total railway fares show an increase of £120, and the printings an increase of £135.

The total number of pages printed in the Minutes of the Council and all Committees for the year was 1,430 pages, an increase of 392 pages. The Committees increased 226 pages, while the presentation to the Council of Minutes in the form of Quarterly Reports represented 146 pages.

Central Premises Expenses (Abstract C).

The increase is due to the item of rent. In 1907, the Association paid rent only for nine months.

Central Printing, Stationery, and Postage Expenses (Abstract D).

The expenditure under this head shows little variation. It is realised that every endeavour should be made to keep down unnecessary expenditure for postage and stationery.

Central Staff Expenses (Abstract E).

The total charges under this head remain the same. Owing to the death of the late General Secretary and Manager, the item for Pension is less by £300.

Library Account (Abstract F).

During the year the bulk of the Library has been warehoused. After writing off £200 for depreciation this stands at a total value of £2,007.

Journal Account (Abstract G).

The cost of producing the JOURNAL shows an increase of £1,100 for the twelve months. The analyses of Secret Remedies have involved considerable outlay, representing an increase of £150. Members will generally recognise that the information published about secret remedies is of very considerable interest and importance to the profession. Contributions and reporting show an increase of £130, influenced by the larger number of Sections at Sheffield and by Parliament sitting for an Autumn Session.

The Managerial expenses show an increase of £730. During the year the circulation of the JOURNAL has gone up. There has been an increase of eighty literary pages, twenty pages in the Supplement, and one hundred and twenty-four advertisement pages. This involved additional expenditure in wages, printing and despatch, paper and postage.

The JOURNAL revenue, both from advertisements and sales, shows steady and sustained progress all round. This is satisfactory when other newspapers are still complaining of considerable shrinkage on the revenue derived from advertisements.

Out of the total receipts for the JOURNAL the loss for bad debts represents less than one-eighth per cent.

New Premises Account.

During the year £27,231 were paid in connection with the re-building of the central premises. With sums previously disbursed the amount standing to the debit of the New Premises Account on 31st December, 1908, was £38,586.

The Financial Outlook.

Once again your Council would repeat its warning of the last two years that the finances of the Association require very careful nursing until the benefits of the re-building scheme are an accomplished fact. The revenue from the JOURNAL has shown remarkable vitality at a time when newspaper proprietors have had much cause for anxiety—nevertheless, such revenue is liable to fluctuate considerably. The Association, like any other public body, must stand or fall by the soundness of its financial position. It demands upon the resources of the Association continue to grow in the same degree, the most important question Members will have to decide is, not so much what the Association is going to do, but how it is going to do it.

ESTIMATE OF INCOME AND EXPENDITURE FOR 1909.

(9) In submitting an estimate of Receipts and Expenditure for the current year, it will be observed that if the expenses are to go on in a like ratio, and provided no rent is derived from the ground floor and basement of the new premises, there is an estimated deficit of £750.

EXPENDITURE.

	£
General Association Expenses	2,550
Central Meeting Expenses	4,000
Central Premises Expenses	1,100

THE BRITISH MEDICAL JOURNAL.

(10) Your Council has during the past year continued the policy with regard to the JOURNAL of the Association which has proved so successful in the past. The aim is to render the BRITISH MEDICAL JOURNAL a periodical useful to the Members in their daily avocations, and worthy to continue to hold the high place which it has won among the chief medical journals of the world. The variety of interests which occupy the attention of medical men is reflected in its pages, and though the greater part of its space is properly given to topics concerning the actual practice of Medicine, curative or preventive, matters affecting the social and material interests of the Profession constantly receive notice. As an example, reference may be made to the full account published immediately after its issue of the duplex Report of the Royal Commission on the Poor Laws and the Relief of Distress, which contained in both parts recommendations calculated to revolutionize the Poor Law Medical Service, and to establish a more extended system of state aid on a provident basis. The institution of medical inspection of school children has produced a mass of material of the greatest interest, both practical and clinical. And the importance of the report of the special committee of experts to the London Education Committee (dealing with general principles) made it desirable to give a full account of its recommendations, and of the reasons for them. In June a special number was devoted to questions affecting the planning, administration, and financial support of Voluntary Hospitals, a subject which closely affects medical interests, educational, social, and pecuniary. An attempt was made to show the advantages of the uniform system of hospital accounts, as illustrated by the hospitals in London, where the influence of King Edward's Fund has made the system practically compulsory. But it has not been possible, as was hoped, to extend the analysis to the hospitals in other centres, as few or none of them have yet seen the propriety of adopting the uniform system settled by the experts whose services were enlisted by the King's

British Medical Association.

EDWIN RAYNER,
Honorary Treasurer.
GUY ELLISTON.

Fund. The publication of analyses of proprietary remedies, commonly called patent medicines, has been, for the present at any rate, concluded. The information, slightly abbreviated in some cases, has been collected in a volume which it is believed will be useful to the Profession, and possibly instructive to those members of the public who desire enlightenment. It will have been observed that the drugs or herbs of which these much vaunted preparations are found on analysis to be composed, are, with hardly an exception, of the most ordinary, and usually of the most old-fashioned kind. The contrast between the promises and prices of the advertiser, and the nature and prime cost of the ingredients he uses, can hardly fail to produce some effect upon public opinion. Among the quacks who prey upon the public none perhaps is more deserving of reprobation than is he who professes to possess a secret and infallible cure for cancer. A couple of years ago a report of the analytical examination of a series of such remedies was published, showing that they consisted for the most part of preparations containing such drugs as zinc sulphate, alum, and iron chloride. Last autumn evidence was obtained that another cancer cure, exploited by so-called herbalists in South Wales, consisted of two preparations, the one containing zinc chloride, and the other turpentine. A clinical report of one of the cases thus treated was published, together with a special plate, showing the superficial escharotic effect of the applications.

In nearly every issue of the JOURNAL one or more Clinical Lectures or Addresses have been published, and the great mass of material furnished by the sections of the Annual Meeting, which is largely clinical in its character, was published during the third and fourth quarters of the year, the printing being completed in the issue of October 31st.

The Supplement, which has been issued weekly, in addition to the Reports of the proceedings of the annual Representative Meeting, Meetings of Branches and Divisions, and Reports issued by the various central Committees of the Association, has contained much other matter of a semi-official character, including copies of Acts and Bills of special interest to the Medical Profession, and reports of the proceedings of the General Medical Council and of the Central Midwives Board.

COMMITTEES.

(11) The Association is again indebted to the Chairmen and Members of the many Committees and Sub-Committees for their labours during the past year. No praise can be too high for the hard and ungrudging work which has been expended upon the many complicated problems that have received attention, a proof, if any were needed, of the willingness with which busy men are ready to devote their time and talents in the unpaid service of advancing and protecting the interests of the public and of their medical brethren.

Form of Report.

(12) In the preparation of the following portion of the Report the Council has followed the arrangement of matter indicated by the Standing Order adopted by the Representative Meeting at Sheffield:

Reports of Council, and Reports, if any, of Standing Committees, to the Representative Meeting shall comprise the following:—

- (a) A list of matters referred by the Representative Meeting to the Council.
- (b) Reports with specific Recommendations upon all matters in which the Council or Committee considers that action should be taken involving a new declaration of policy or expenditure not already authorised.
- (c) A short report of all action taken by the Council or Committee in accordance with instructions of the Meeting.
- (d) A list of matters under consideration but not completed.

For convenience the matters under the head (a) are arranged in the order of the Minutes of the Meeting, reference being given to the paragraphs of the Report in

which will be found the statement of action taken to give effect to the instructions.

The Reports under the heads (b), (c), and (d) are classified under the names of the Committees which respectively advise the Council upon the matters in question.

(13) LIST OF MATTERS REFERRED.

<i>Minute of A.R.M.</i>	<i>Subject and Committee to which it was referred.</i>
71A	Medical Certification of Hospital Patients. Hospitals Committee. (See paragraph (23).)
120	Definition of Nursing Home. Hospitals Committee. (See paragraph (24).)
126	Advising Representative Meeting of questions of Finance. Journal and Finance Committee. (See paragraph (35).)
143A	Opening of Fresh Public Medical Institutions. Hospitals Committee. (See paragraph (26).)
143B	Representation of Local Medical Professors on Boards of Hospitals, &c. Hospitals Committee. (See paragraph (27).)
144, 148-9	Proposed Out-patient Department, King's College Hospital. Hospitals Committee. (See paragraph (30).)
150	Contributions to Hospitals by Employers and Employees. Hospitals Committee. (See paragraph (28).)
151	Hampstead Hospital Dispute. Hospitals Committee. (See paragraph (31).)
170 and 171	Circular to Non-members of the Association. Organisation Committee. (See paragraph (67).)
173	Addresses to Medical Students. Organisation Committee. (See paragraph (69).)
185 and 192	Vaccination. Public Health Committee. (See paragraph (76).)
193	Whole-time Medical Officers of Health. Public Health Committee. (See paragraph (72).)
201	Scheme of Probable Dates for Matters referred to Divisions. Organisation Committee. (See paragraph (68).)
203	Medical Sociology. Medico-Political Committee. (See paragraph (41).)
339	Proxy Voting (in Charter) for Colon Branches. Organisation Committee. (See paragraph (66).)
473 to 564	Recommendations of Special Finance Committee. Journal and Finance Committee. (See paragraph (35).)
	Organisation Committee. (See paragraph (64).)
561	Alteration of By-laws in accordance with Recommendation of Special Finance Committee. Organisation Committee. (See paragraph (64).)
566	Charter (General Instructions). Organisation Committee. (See paragraph (65).)
623 to 630	Report on Pure Consultants. Central Ethical Committee. (See paragraph (18).)
635	Definition of term "Hospital." Central Ethical Committee. (See paragraph (16).)
640	Medical Authors not to re-publish Articles from medical journals without sanction of Editor. Central Ethical Committee. (See paragraph (15).)
644	Relation of Homeopaths to the Association. Central Ethical Committee. (See paragraph (18).)
648 and 649	Medical Practice and Chemist's Business in same house. Central Ethical Committee. (See paragraph (17).)
674	Sanatoria for Workers. Hospitals Committee. (See paragraph (29).)
676	Gratuitous Treatment of Rate-Maintaining Patients. Medico-Political Committee. (See paragraph (47).)
682 and 683	Amendment of Notification of Births. Medico-Political Committee. (See paragraph (42).)
685, 686, 688	Nurses Registration Bill. Medico-Political Committee. (See paragraph (43).)

Minute of A.R.M.	Subject and Committee to which it was referred.
692	Security of Tenure for Medical Officers of Health. Public Health and Medical Political Committees. (See paragraph (73).)
693	Infant Life Protection Bill. Medico-Political Committee. (See paragraph (44).)
703, 702	Coroners' Law and Methods of Coroner for S.W. London. Medico-Political Committee. (See paragraph (45).)
703	Special Tribunal for Medico-Legal Cases. Medico-Political Committee. (See paragraph (45).)
713, 718	Medical Inspection of School Children. Medico-Political Committee. (See paragraph (36).)
720	Medical Inspectors of Schools under the guise of Assistant Medical Officers of Health. Medico-Political Committee. (See paragraph (36).)
731 and 732	Treatment of Children found on Inspection to be Defective. Medico-Political Committee. (See paragraph (36).)
734 to 737	Medical Examinations for Life Insurance. Medico-Political Committee. (See paragraph (49).)
744, 745	Payment of Medical Practitioners called in by Midwives. Medico-Political Committee. (See paragraph (46).)
758	Metric System in Medicine. Medico-Political Committee. (See paragraph (48).)
760 and 762	Castleford case. Public Health Committee. (See paragraph (75).)
763 and 766	By-laws as to Standing Committees, Organisation Committee. (See paragraph (64).)

(A) CENTRAL ETHICAL COMMITTEE.

(4) The Central Ethical Committee has held five meetings at the Annual Representative Meeting, 1908.

REPORT WITH RECOMMENDATIONS.

Re-publication of Articles appearing in Medical Journals.
With reference to Minute 640 of the Annual Representative Meeting, as follows:—

That, with reference to Resolution 3 of the International Association of the Medical Press, it be an instruction to the Committee that steps be taken to secure that authors themselves shall not publish such articles without having previously obtained the sanction of the editor or publisher of the Medical Journal,

Council submits the following Recommendation:—

Recommendation.

That it is the professional duty of Medical Authors of articles in Medical Journals to co-operate with the proprietors and editors of those Journals in preventing any improper use of such articles for purposes of advertisement.

ACTION TAKEN UNDER INSTRUCTIONS OF REPRESENTATIVE MEETINGS.

(16) Definition of term "Hospital."

The Annual Representative Meeting last year referred for consideration the definition of the term "Hospital" proposed by the Committee. After consultation with the Council taking exception to the former definition, the Council reports that, in view of the difficulties of framing a comprehensive and satisfactory definition, it has decided to abandon the attempt.

(7) Medical Practice and Chemist's Business carried on in the same House.

This matter was also referred for further consideration at the last Annual Representative Meeting. The Council reports that after consideration of the general principle involved in the paragraph referred back, it adheres to the opinion therein stated, namely:—That there would be no objection to the practice of a medical man being

carried on in the same house as a chemist's business, provided that the parts of the house used for these purposes be entirely separate, and that the business be not used to advertise the practice."

INSTRUCTIONS UNDER CONSIDERATION.

(18) Recognition of Special Class of Consultants and Relation of Homœopaths to the Association.

The Committee has still under consideration the preparation of reports on the following subjects, in accordance with Minutes 623 to 630 and 644:—Recognition of a Special Class of Consultants and the Relation of Homœopaths to the Association.

OTHER MATTERS CONSIDERED.

(19) Revision of Model Ethical Rules.

The revision of Model Ethical Rules is receiving the careful consideration of the Central Ethical Committee, and the Council hopes soon to be in a position to circulate them to the Divisions for their consideration.

(20) Cases.

(a) The Committee has considered four cases in which application was made to the Association to bring before the General Medical Council questions of conduct of members of the profession. Each case was carefully considered with the assistance of the Solicitor of the Association, and the Central Ethical Committee advised that the evidence obtainable did not establish such a *prima facie* case as to justify the Association in appearing as Complainant before the General Medical Council.

(b) Of the large number of other cases affecting individual Members of the Association, and other members of the Medical Profession, which have been dealt with by the Central Ethical Committee during the Session, in accordance with its reference under the By-laws, none has involved new questions of principle of such importance as to require report to the Representative Meeting.

(B) CHLOROFORM COMMITTEE.

(21) The work is being completed by the compilation of a final Report which is intended to focus the whole of the work of the Committee. It will also contain an account of work done outside the Committee which is germane to the Committee's reference.

This work is as yet uncompleted, but is in course of preparation.

(C) COLONIAL COMMITTEE.

(22) The Colonial Committee has not met since the last Annual Representative Meeting, no new subjects having been referred to it. In reply to inquiries made of the Honorary Secretary of the New South Wales Branch it appears that, a favourable opportunity not having presented itself, no further action has been taken in the matter of Medical Legislation mentioned in the last Report of the Committee.

(D) HOSPITALS COMMITTEE.

REPORTS WITH RECOMMENDATIONS.

(23) Medical Certification of Suitability of Patients for Admission to Hospitals.

Having considered the following instruction:—

Minute 71 (a). That the Council be instructed further to consider and report on the subject of medical certification of suitability of patients for admission to hospitals,

the Council issued a report to the Divisions in February (see BRITISH MEDICAL JOURNAL Supplement, February 27, 1909) containing the following Recommendation, which is submitted for the approval of the Representative Meeting:—

That a definite pronouncement be made by the Representative Meeting on behalf of the Association, as follows:—

Recommendation.

"That a medical certificate of suitability for hospital treatment be required as a condition of hospital treatment, except in case of casualties."

(24) Definition of a Nursing Home.

In response to the instruction to the Council (Minute 120) to provide a definition of a Nursing Home, the Council recommends:—

Recommendation.

That the Representative Meeting approve the following definition:—

"A 'Nursing Home' is an institution in which patients are received for medical care under the attendance of medical practitioners selected by themselves, and where the patients are responsible to the home for charges for maintenance and nursing, and to the medical practitioners for their fees."

ACTION TAKEN UNDER INSTRUCTIONS OF THE REPRESENTATIVE MEETING.

(25) In accordance with Resolutions 143a, 143b, and 150 of the Annual Representative Meeting, the subjects of the following Motions have been referred, with explanatory Memoranda, to the Divisions, and the Reports upon them will be submitted after consideration of the replies:—

(26) Fresh Public Medical Institutions.

That it is desirable that no fresh Public Medical Institution should be opened without previous consultation with the local Profession through some organised body such as the Division of the British Medical Association in the area of which it is proposed to establish such new Institution, and that it be an instruction to the Council to give effect to this principle in considering applications from Divisions or Branches for support in dealing with Hospital questions.

(27) Representation of Local Medical Profession on Boards of Hospitals and Similar Bodies.

That in the interests of Hospitals and their work it is desirable that medical practitioners should nominate representatives for election to Boards of Management of Hospitals in their respective localities, and that such nominations should be carried out by an organised professional body such as a Division of the British Medical Association;

That on all bodies formed to promote or control medical assistance for the sick, and which receive public subscriptions, there should be adequate direct representation of the medical profession resident in the district or districts affected;

2. That the conduct of the nominations and election of such representatives can be best carried out by the British Medical Association through its Branches or Divisions, as the case may be, on a scheme approved of by the members of the Medical Profession resident in the district or districts likely to be effected;

(28) Contributions to Hospitals by Employers of Labour and Employees.

(a) That the contributions to hospitals by employers of labour and employees, by means of weekly collections and otherwise, should be considered as being the payment of premiums for a proportionate insurance against liability for medical and hospital attendance in cases of serious illness and accident which are made on behalf of those unable themselves to pay directly or adequately for the same; and not as entitling the contributors to unlimited hospital as also gratuitous medical attendance as at present seems to be claimed.

(b) That it be an instruction to the Central Hospitals Committee of the Association to endeavour, through the Divisions and otherwise, to obtain acceptance for this principle by the several parties concerned, with a view to elaborating some scheme whereby these contributions should be paid to the rightful parties, viz. Insurance Companies, who in their turn will proportionately recompense Hospital and similar Boards, Hospital Staffs, General Practitioners, &c., for all attendances given on illnesses or accidents incurred by those so insured, reporting from time to time to this Body.

(29) National Association for Sanatoria for Workers Suffering from Tuberculosis.

The following pronouncement of the Representative Meeting has been circulated for the information of the Divisions:—

Minute 674.—That, in the opinion of the Representative Meeting, it is not advisable that Members of the Association should in future accept or continue to hold appointments as Honorary Local Medical Referees to the National Association for the Establishment and Maintenance of Sanatoria for Workers suffering from Tuberculosis, and that the Divisions be requested to consider the matter as affecting any of their own Members, or other practitioners in their respective areas, who may hold such appointments.

(30) Proposed Out-Patient Department, King's College Hospital.

In accordance with the instruction (Minute 145) to give effect to the Resolution of the Representative Meeting (Minute 144), approving and supporting the Resolution passed at a meeting of South London Practitioners on April 30th, 1908, concerning the out-patient department of King's College Hospital, the Council has entered into correspondence with the Medical Committee of King's College Hospital with a view to bring about amicable relations between the Hospital and the general body of Medical Practitioners in its neighbourhood. The matter is still under consideration.

(31) Hampstead Hospital.

For the purpose of carrying out the instruction of the Representative Meeting (Minute 151):

That the Council consider how support can best be given to the Division in its endeavours to retain at least a portion of the hospital as a purely local institution, in which patients can be attended by their own medical attendants, whether in free or pay beds,

the Council has delegated to the Hospitals Committee the duty of negotiating to bring about an amicable solution on the lines indicated by the Representative Meeting. The matter is not yet in a position for report.

OTHER MATTERS CONSIDERED.**(32) Staffing of a Hospital maintained by a District Council.**

The Committee has considered an application from the Cardiff Division for advice as to the Staffing of the Barry Accident and Surgical Hospital, which is an Institution maintained by the Barry District Council by the Rates.

Questions having arisen as to whether the Hospital should continue to have, as heretofore, a specially selected staff of General Practitioners, or whether it should be open to all members of the local Profession to attend patients at the Hospital, and the District Council having intimated its willingness to be guided entirely by professional opinion in the matter, the local practitioners applied for advice to the Cardiff Division, of which Division some of them were already Members and the remainder have applied for membership.

The Division passed the following Resolutions, but further resolved to take no action until the opinion of the Central Hospitals Committee had been obtained:—

1. That the Cardiff Division is of the opinion that the services of the Medical Staff of the Barry Accident and General Surgical Hospital should be remunerated, in view of the fact that the Hospital is supported by the Rates.

2. That the Cardiff Division is of opinion that the Barry Hospital be for the use and convenience of every medical man (principals only) in the district, three years' residence in practice in the district to be a qualification; the casualty work to be done in rota, according to arrangement among the medical men themselves.

The Committee, having regard to the importance of the case of this Institution (which is especially referred to in the Minority Report of the Royal Commission on the Poor Law) as a precedent, has decided not to advise until fuller information has been obtained, and has instructed the Medical Secretary to visit the district and report.

(33) United Kingdom Hospitals Conference.

The Committee has considered the prospective date of meeting of the United Kingdom Hospitals Conference. The Chairman nominated by the Conference Committee at its last meeting has intimated his inability to act. The Committee has received information indicating the possibility that the Hospitals Association, which has for some time been inactive, may co-operate with the Association in the organisation of further Conferences. The possibility of such co-operation is being considered before further steps are taken to convene a Conference.

(E) IRISH COMMITTEE.

(34) The Irish Committee met four times during 1908—three times in Dublin and once in Waterford.

The Committee consists of 15 members and the average attendance was 11.

Considerable correspondence passed between the Irish Local Government Board and the Council in regard to the necessity of making compulsory a satisfactory scale of salaries for Poor Law Officers, but without any good result as yet.

The Lists of Medicines and of Surgical Appliances sanctioned by the Irish Local Government Board were revised by the Committee, and most of the suggested alterations and additions were accepted by the Board.

The question of procedure in Local Government Board enquiries in Ireland was raised by the Editor of the JOURNAL and considered by the Committee. At the request of the Committee, the Council authorised the Committee, to instruct a Dublin solicitor to enquire into and report on the procedure adopted in such enquiries. A report was obtained with suggestions as to future action. The Committee proposes as cases arise to obtain shorthand notes and submit them for consideration by the Solicitor.

The Tuberculosis Prevention (Ireland) Bill was considered by the Committee and Resolutions towards improving the Bill were adopted.

The Medical Inspection of School Children received attention, but, owing to the fact that the operation of the Act in England has been found to be very costly the Committee was obliged to drop the matter for the present.

Other matters considered by the Committee during the year include: Public Health Bill, Irish representation on the Council, Canvassing at Poor-Law Elections, Questions to Parliamentary Candidates, &c.

(F) JOURNAL AND FINANCE COMMITTEE.

(35) Instructions of Annual Representative Meeting arising out of Report of Finance Inquiry Committee.

System of Financial Control.

In accordance with Minutes 126 and 507 of the Representative Meeting, namely:—

Minute 126.—That it be an instruction to the Council to consider what provision can be made for advising the Representative Meeting as to the financial aspects of any Resolution involving special expenditure, and to report to the next Representative Meeting.

Minute 507.—That Recommendation 4 (a) be adopted, as follows:—

Improvements in System of Financial Control.

4. That to enable the Representative Meeting duly to consider the financial aspects of questions of policy and administration;

(a) There be placed before it a Report from the Finance Committee on the financial aspects of any proposals involving considerable new expenditure;

the Journal and Finance Committee, by instruction of the Council, is considering if arrangements can be made which will enable it to report to the Representative Meeting upon the financial aspects of any proposals placed upon the Agenda which involve considerable new expenditure.

Secretarial Work.

(Minutes 539 to 559 inclusive.)

The Council considered the following Resolutions of the Representative Meeting:—

Minute 544.—That the whole work of the Association be arranged in three co-ordinate Departments:—(a) Financial; (b) Editorial; (c) Medical or Professional.

That these Departments be respectively under the following officers:—(a) Financial Secretary; (b) Editor; (c) Medical Secretary, who shall hold equal official positions in the Association;

and gave effect to them by deciding, at the Meeting in October, that the office of the General Secretary and Manager should be known as that of the Financial Secretary as from January 1st, 1909.

Upon consideration of a Memorandum subsequently submitted by Mr. Elliston, the Council has come to the conclusion that it is desirable in the interests of the Association that the words "Business Manager" should be added to his title in order that the duties of the office may be more correctly described.

The Council recommends the Representative Meeting to approve that the title of the office formerly known as that of General Secretary and Manager be henceforth "Financial Secretary and Business Manager."

(Minutes 545 and 546.)

The work of the Science Committee has been transferred to the Medical Secretary's Department.

(G) MEDICO-POLITICAL COMMITTEE.

The Medico-Political Committee has held five meetings since the last Annual Representative Meeting.

REPORTS WITH RECOMMENDATIONS

(36) *Medical Inspection of School Children and Treatment of those Found Defective.*

The Representative Meeting at Sheffield requested the Council to treat the matter of Medical Inspection and Treatment of School Children as urgent, and to communicate with the Divisions as soon as possible. A Report was accordingly issued to the Divisions, as a confidential document, in December, 1908, and replies were received from 102 Divisions out of a possible 157. The nature of the replies and the Reports of Division Meetings, at which the subject had been discussed, showed that great interest was taken in the matter.

Based on these replies, a further Report has just been completed, and will be circulated to the Divisions in May.* Accompanying this Report are Recommendations, upon which Divisions are asked to instruct their Representatives.

(37) *Security of Tenure for School Medical Officers.*

Representations have been made to the Board of Education as to the desirability of provision being made in the Education Code that School Medical Officers and their Assistants should be appointed without reference to time, subject to reasonable notice, and should not be liable to dismissal without right of appeal to the Board of Education.

The Council recommends:

Recommendation.

That the Representative Meeting approve the action of the Council in seeking to secure reasonable security of tenure of office for the School Medical Officer and his Assistants.

* See BRITISH MEDICAL JOURNAL Supplement, May 15th.

(38) Representation of the Association on the Central Midwives Board.

In authorising the Medico-Political Committee to prepare and submit evidence on behalf of the Association before the Departmental Committee, the Council added the following instruction :—

“and to urge the advisability of representation of the Association on the Central Midwives Board.”

As this matter has not been the subject of a Resolution by the Representative Meeting, the Council recommends :—

Recommendation.

That the Representative Meeting approve the action of the Council in endeavouring to secure representation of the British Medical Association on the Central Midwives Board.

(39) The Rights and Obligations of Members of Committees and Sub-Committees of the Association.

A question has arisen as to the propriety of a member of a Committee or Sub-Committee taking independent action by a letter to the *BRITISH MEDICAL JOURNAL* with respect to subjects which are under the consideration of the Committee or Sub-Committee of which he is a member. The question appears to the Council to be one of general policy, and it therefore recommends :

Recommendation.

That the Representative Meeting take into consideration the general question of policy raised by the above statement.

(40) Representation of the British Medical Association in the House of Lords.

A communication has been received from Earl Wemyss, stating that he proposes to bring before the House of Lords the question of arrangements being made whereby important Bodies, representative of those engaged in various professions and businesses, may nominate each three members of the House of Lords to represent them officially in questions coming before the House of Lords, the names of such representatives to be entered on the Journal of the House. Earl Wemyss approaches the British Medical Association, as a Body representative of the Medical profession, and states that the following bodies have already expressed approval of the idea: The Royal Academy, the Royal Institute of British Architects, the Building Trades Federation of the United Kingdom, the Shipping Federation, and the Employers' Parliamentary Council.

The Council recommends :

Recommendation.

That the Representative Meeting take into consideration the general question of policy raised by the above statement.

ACTION TAKEN UNDER INSTRUCTIONS OF THE REPRESENTATIVE MEETING.**(41) Section of Medical Sociology.**

The Representative Meeting at Sheffield requested the Council to consider the advisability of making arrangements for a Section of Medical Sociology at Belfast.

After full consideration, the Council decided that, having regard to the difference between the conditions of medical sociology in Ireland and those prevailing in other parts of the United Kingdom, the Belfast Meeting would not afford a suitable opportunity for the inauguration of such a Section.

(42) Amendment of the Notification of Births Act.

The Council has noted the instructions of the Representative Meeting that steps should be taken to have Medical Practitioners and Midwives excluded from the operation of the Notification of Births Act, 1907, but having regard to the number of other Parliamentary matters requiring the attention of the Association at present, and the improbability of effecting the amendments desired at an early date, it has deferred action in this matter.

(43) Nurses' Registration.

Acting on the instructions of the Representative Meeting, representations were made to Lord Amphil (the sponsor of the Nurses' Registration Bill in the House of Lords), to the Society for the State Registration of Nurses, and to the Association of Registered Medical Women, on the various points discussed at Sheffield. Sympathetic replies were received from both of these Societies, and Lord Amphil moved the desired Amendments in the House of Lords, where the Bill was passed last Session. The restrictions as to the choice of the British Medical Association's Representatives were eliminated from the Bill, but Clause 29 of the original Bill, which provided for a declaration that the Bill afforded no authority to practise medicine, was not restored. The Bill did not obtain discussion in the House of Commons last Session, but has now been introduced into that House exactly as it left the House of Lords.

A second Bill has been introduced, with the same object, which includes a clause identical with Clause 29 of the original Bill, and gives representation to the British Medical Association, but also gives representation to several other bodies, including the Central Hospital Council, the Matrons' Council, the Royal British Nurses' Association, and the Queen Victoria's Jubilee Institute for Nurses. A Nursing (Scotland) Bill, which sets up a system of Registration exclusively for that part of the Kingdom, has also been introduced. It gives no representation to the British Medical Association. The Council has expressed approval of the principle of separate Registration for Scotland, provided that there be reciprocity of Registration between the various parts of the United Kingdom.

(44) Infant Life Protection Bill.

Representations as to the Amendments necessary in the opinion of the Association, in the Infant Life Protection Bill, were made to Lord Robert Cecil, the introducer of the Bill, in the autumn session of 1908 in accordance with the instructions of the Representative Meeting. Subsequently the Home Secretary was also approached.

The Council is glad to be able to report that the Bill as re-introduced by Lord Robert Cecil in the present session has been amended in accordance with the wishes of the Association.

(45) Coroners' Law.—Coroner for South-West London.

Minute 700.—That the Council be instructed to approach the Lord Chancellor to obtain, if possible, juster and more uniform procedure in relation to riders to verdicts by Coroners' Juries.

Minute 702.—That this Representative Meeting of the British Medical Association reaffirms its previous condemnation of the methods of Mr. Troutbeck, the Coroner for South-West London, in conducting his official enquiries into causes of death. Further, the Representative Meeting is of opinion that the recent interpretations by Mr. Troutbeck of the Coroners' Acts are contrary to the principles and safeguards provided in the Statutes for the registration of deaths by Registered Practitioners, and will cause the gravest public injury.

The Representative Meeting therefore approves the action of the President and Council in pressing upon the Lord Chancellor the urgent necessity of taking immediate steps to prevent the occurrence of erroneous findings and miscarriages of justice to which the Representative Meeting is of opinion Mr. Troutbeck's conduct as His Majesty's coroner conduces, and thereby avoid a public scandal and danger.

Minute 703.—That this Meeting cordially approves and endorses the action already commenced by the Medico-Political Committee with the view of establishing a High Court Tribunal, properly constituted with medical assessors, to which cases involving special medico-legal questions may be removed from Coroners' and lower Courts for hearing and investigation.

In view of the appointment by the Home Secretary, in December, of a Departmental Committee to inquire into the Law relating to Coroners, Coroners' Inquests, and the practice

of Coroners' Courts, the representations to the Lord Chancellor for which the collection of further evidence had already been undertaken, were abandoned for the time being.

The Departmental Committee has consented to hear witnesses nominated by the Association, and evidence is being prepared dealing with all aspects of Coroners' law, the practice of Coroners' Courts, Death Registration, and other subjects, covered by the reference to the Departmental Committee, in which the Medical Profession is interested.

In the preparation of this evidence due regard is being given to the above and other instructions of the Representative Meeting.

(46) *Amendment of the Midwives Act, 1902.*

A Departmental Committee was appointed by the Privy Council in December, to consider the working of the Midwives Act, 1902, and the Association was asked if it desired to give evidence. Evidence, based on previous decisions of the Association, was prepared, and a circular sent to the Divisions drawing their attention to the fact that evidence was being given on behalf of the Association and requesting information on certain points. The response to this circular, regard being had to the amount of discussion which has centred round this Act since its introduction, was disappointing, only 28 Divisions out of 157 sending in any reply up to April 24th, 1909. The evidence of the Association will be taken at an early date.

The Council, on consideration of the composition of the Departmental Committee, made representations to the Lord President of the Privy Council in favour of the addition to the Committee of Representatives of the interests of general practitioners and midwives. A reply was received to the effect that, in the opinion of the Lord President, the Committee, as constituted, was sufficiently large for the practical objects of the inquiry, which would not be served by the addition to its numbers, of representatives of special interests, whose views would be properly considered in the evidence to be given.

INSTRUCTIONS UNDER CONSIDERATION.

(47) *Gratuitous Treatment of Rate-supported Patients.*

The consideration of the following Resolution of the Representative Meeting was postponed pending issue of the Report of the Royal Commission on the Poor Law:—

Minute 676: That the Representative Meeting considers that the services of the Profession should not be given gratuitously to patients who are maintained by public funds.

(48) *Metric System of Weights and Measures in Prescribing and Dispensing.*

In accordance with the instructions of the Representative Meeting at Sheffield, a scheme of procedure in reference to the introduction of the metric system of weights and measures amongst Medical Practitioners in prescribing and dispensing, is in course of preparation.

(49) *Medical Examinations for Life Insurance.*

Resolutions 734 to 737 (inclusive) of the last Representative Meeting were referred to the Life Insurance Sub-Committee, but, on account of the great pressure of other medico-political work, it has not been found possible to convene the Sub-Committee.

OTHER MATTERS CONSIDERED.

(50) *Spiritual Healing.*

The Metropolitan Counties Branch of the Association drew the attention of the Council to proposals which had been made to the Bishop of London, for the establishment of a Diocesan Council to consider the subject of Spiritual Healing. The subject, which was apparently arousing considerable interest among religious bodies, was referred to the Medico-Political Committee, and a special Sub-Committee was appointed to investigate it.

The Sub-Committee has held two meetings and addressed certain inquiries to dignitaries of the Church, and others specially interested in the subject. The replies received show the necessity for a careful professional investigation into the subject at its present early stage of development.

(51) *Conference with Friendly Societies.*

In December last, a communication was received asking the Association to take part in a public conference convened by the Charity Organization Society to hear and discuss a paper, by Dr. James Pearce, of Trowbridge, on "Friendly Societies and the Medical Profession." The Council appointed the following six representatives of the Association to attend the Conference:—Dr. A. E. Morison, Sunderland (President, North of England Branch); Dr. W. T. Lydall, Birmingham (Hon. Secretary Birmingham Division, and Member of the Central Contract Practice Sub-Committee); Dr. J. H. Taylor, Salford (Hon. Secretary and Representative of Salford Division, and Member of the Central Contract Practice Sub-Committee); Dr. W. E. Thomas, Rhondda Valley (Hon. Secretary, South Wales Branch, and Chairman of Branch Contract Practice Sub-Committee); Mr. Percy Rose (Representative of the Stratford Division and Member of the Central Contract Practice Sub-Committee); and the Medical Secretary. All the Branches and Divisions were notified of the holding of the Conference, and over 100 tickets were issued in response to applications received. A full report of the Conference appeared in the Supplement to the BRITISH MEDICAL JOURNAL, February 13th, 1909.

Suggestions were thrown out by various speakers as to the desirability of a formal Conference being arranged between a few specially appointed Representatives of the Friendly Societies on the one part, and of the British Medical Association, as representing the Medical Profession, on the other part, with a view to an amicable adjustment of existing difficulties.

The Council, while not satisfied that matters have reached a stage at which such formal Conference would lead to any practical result, considers that the Association should be prepared to accept an invitation to a preliminary Conference with the object of a simple exchange of opinions, if this should be desired by the Friendly Societies, or by any neutral body, such as the Charity Organisation Society.

(52) *Rules of Nursing Associations.*

After consideration of correspondence with the Honorary Secretary of the South Western Branch with respect to difficulties which had arisen in Cornwall between nurses and medical practitioners, a Sub-Committee was appointed to draft Model Rules for the governance of the relation between nurses employed by Nursing Associations and medical practitioners. Certain rules were forwarded for the consideration of the Branch, which has used them in the discussion of the redrafting of the rules of the Cornwall County Nursing Association. Negotiations have also been entered into with the Queen Victoria's Jubilee Nursing Association, which has expressed itself as willing to consider any representations made to it by the Association on behalf of the profession. Suggestions for the amendment of the Model Rules of the Institute have been drawn up and submitted for consideration.

(53) *Co-operation with Association of Registered Medical Women.*

Seeing that cases affecting medical women in relation to Contract Practice appointments were becoming increasingly frequent, the Medico-Political Committee entered into communication with the Association of Registered Medical Women, with the result that two official representatives of that Association were appointed to act on the Contract Practice Sub-Committee, when questions which specially affect medical women are under discussion. It is proposed that the two Associations, in co-operation, shall address a circular to all registered medical women, drawing attention to the special importance at the present time of united action with regard to appointments, especially public appointments, open to women, and advising a certain course of action, with a view of securing, as far as possible, that underpaid public appointments are not accepted by medical women through ignorance.

(54) *Coroners' Fees to Naval Surgeons.*

Representations having been made to the Medico-Political Committee that an Order of the Admiralty had been issued in 1907 prohibiting Surgeons in the Royal Navy from accepting fees for inquests, or for post-mortem examinations performed under the order of a Coroner, a Memorandum has been addressed to the First Lord of the Admiralty.

(55) Medical and Dental Acts Consolidation Bill.

This Bill, after further revision by the Committee in co-operation with the British Dental Association, is being completed, and Sir Walter Foster has promised to introduce it into the House of Commons. It is intended, in conjunction with the British Dental Association, to organise, at the suitable moment, a memorial in favour of the Bill, signed by as many as possible of the medical and dental practitioners of the Kingdom.

(56) Reports of the Royal Commission on the Poor Law.

Since the appearance, in February, of the Reports of the Royal Commission on the Poor Law, a good deal of attention has been paid to the matter by various Committees of the Association, and by means of articles in the JOURNAL. Having regard to the importance of these Reports to the medical profession, the Council has appointed a Special Committee to report on the whole subject as affecting the profession, with recommendations as regards proposed action by the Association.

(57) Central Emergency Fund.

This Fund began the year 1908 with a balance of £9 4s. 11d. During the year £358 9s. 6d. was received from individual members of the Association and £109 9s. 6d. from Divisions and Branches, making a total of £477 3s. 11d.

Payments of £400 were made during the year to the South Wales Branch Fund for Ebbw Vale, and a payment of £2 11s. 5d. for the expenses incurred by a practitioner in applying for an appointment which was refused by the candidate when made aware by the Division Secretary of the objections of the local profession. A balance of £74 12s. 6d. was thus left at the end of the year. The preparation of additional Standing Orders for the administration of the Fund is under consideration.

(58) Public Medical Service Rules.

After long consideration and repeated revision by the legal advisers of the Association, the Model Rules for a Public Medical Service are now ready and will shortly be issued for the consideration of the Divisions.

(59) Action taken in Contract Practice Cases.

The Committee has continued to take action in contract practice disputes, in conformity with the decisions of the Representative Meeting on the subject. The following cases have received consideration during the year:—

Alfreton (Colliery Clubs), Chumpanan (India) (District Medical Fund), Clutton, &c. (Medical Aid Societies), Delhi (India) (Hospital appointment), Ebbw Vale (Colliery appointments), Gedding, &c. (Colliery Club appointments), Gillingham (Benefit Society), Loughborough (Medical Aid Association), Lyme Regis (Friendly Societies), Northfleet, &c. (Friendly Societies), Retford (Friendly Societies), Young and Marengo (New South Wales) (Friendly Societies), Wellington (New Zealand) (Friendly Societies) and Woolston (Medical Aid Association).

(60) Action taken with Respect to Appointments of School Medical Officers, and other Public Appointments.

The Committee has, during the past year, taken action with respect to the following School Medical Officerships and other public appointments:—Berkshire County (Lady Inspector of Midwives), Blackpool, Bolton (Lady Inspector of Midwives), Burslem, Bury, Cornwall County, Derby (Borough), London County, Merthyr Tydvil, Mossley, Tyne-mouth, and Walsall (Lady Inspector of Midwives).

(H) NAVAL AND MILITARY COMMITTEE.

(61) The Naval and Military Committee has met twice since the last Annual Representative Meeting.

The subject of Coroners' fees to Naval Surgeons was considered and referred to the Medico-Political Committee. (See paragraph (54).)

The Committee has also had under consideration an Order issued by the Government of India (No. 607, 1st July, 1907, Home Department) restricting the fees payable by natives to Officers of the Indian Medical Service, without the previous consent of the Government. The Council considered that the restrictions thus placed upon the

Officers of the Service were oppressive and unnecessary, and interfered with the right to private practice reserved to Officers of the Medical Service, by the Regulating Act of 1773, also that by lowering the prestige of the Indian Medical Service they would have a disastrous effect on its present and future welfare. The Council therefore addressed a communication to that effect to the Secretary of State for India on November 21, 1908.

(I) OPHTHALMIA NEONATORUM COMMITTEE.

(62) The Ophthalmia Neonatorum Committee has held four meetings since the Annual Representative Meeting, 1908.

As the result of a Resolution passed by the Section of Ophthalmology at the Annual Meeting at Exeter, 1907, a Committee was appointed to consider the question of the prevention of Ophthalmia Neonatorum. The Committee now submits its Report (this Report appeared in the Supplement of May 8th), to which are appended a Memorandum by the Chairman, suggestions by members of the Committee, and other documents elucidatory of the subject.

Before action is taken to give effect to the recommendations above mentioned, the Council proposes to refer the Report for the consideration of the Divisions of the Association, and of the Sections of Ophthalmology and Obstetrics at the Annual Meeting at Belfast.

The Committee will be reappointed for the purpose of considering the results of these discussions, and making recommendations to the Council as to the action to be taken to give effect to the Report.

(J) ORGANISATION COMMITTEE.

(63) The Organisation Committee has held five meetings since the last Annual Representative Meeting.

REPORT WITH RECOMMENDATIONS.**(64) By-laws.**

In reference to the various Recommendations of the Representative Meeting relating to alterations of the present By-laws in order to bring them into conformity with those of the Draft Charter, the Council recommends:—

Recommendation.

That the Representative Meeting amend the Schedule to the present By-laws of the Association as to Standing Committees, by making such verbal changes as are necessary to bring it into conformity with the Schedule as to Standing Committees appended to the Draft Charter.

That the Representative Meeting repeal the present By-laws of the Association, Nos. 23 to 33 inclusive, relative to the composition and mode of election of Council, and that the By-laws Nos. 37 to 46 inclusive, in the Schedule to the Draft Charter relating to the same subject, be adopted in substitution thereof, subject to such verbal amendments or alterations as the legal advisers of the Association may deem to be necessary.

The Council begs to report that, of the Resolutions of the Representative Meeting relating to the recommendations of the Finance Inquiry Committee, that contained in Minute 515 has already been given effect to by the alteration of the By-law as to Capitation Grants, and that the other resolutions, in reference to which amendments of the By-laws are not now being recommended, are found either not to require any alteration of the Regulations of the Association to carry them into effect, or to be such as could not be given effect to by any amendment of the By-laws.

ACTION TAKEN UNDER INSTRUCTIONS OF REPRESENTATIVE MEETING.**(65) Charter.**

In accordance with the instructions of the Representative Meeting, the Charter has been revised, in conference with the legal advisers of the Association.

With reference to the Schedule of grouping of Branches for the election of Members of Council which was referred to the Council for further consideration, it was found impossible to include a satisfactorily revised Schedule in the Charter without unduly delaying its submission to the Privy Council. The Council, therefore, modified the Charter to

the effect that until the first Representative Meeting after the grant of a Charter the grouping shall be determined by the Council. Therefore, no Schedule was appended.

The Petition for a Charter was signed by the following on behalf of the Association, and was sealed with the seal of the Association, by instruction of the Council:—J. A. Macdonald, Chairman of Representative Meetings; Edmund Owen, Chairman of Council; Edwin Rayner, Treasurer; Andrew Clark, B. Walter Foster, Victor Horsley, R. Cochrane Buist, C. G. Drummond Morier, T. Jenner Verrall.

The Petition was presented on December 21st, 1908, was considered by His Majesty in Council, and a Committee of the Privy Council was appointed to deal with the matter, April 3rd being fixed as the last day for receiving Petitions for and against.

The Privy Council has forwarded, for the consideration of the Association, all the Petitions submitted in opposition to the grant of a Charter in the form in which it was applied for by the Association, these being as follows:—

- (1) Royal College of Physicians of London.
- (2) Royal College of Physicians of Edinburgh.
- (3) Royal College of Surgeons of England.
- (4) Royal College of Surgeons of Edinburgh.
- (5) Society of Apothecaries of London.
- (6) Senatus Academicus of the University of Edinburgh.
- (7) British Medical Benevolent Fund.
- (8) Society for the Relief of Widows and Orphans.
- (9) Certain Branches and Members of the British Medical Association.
- (10) Certain Members of the British Medical Association.

A categorical reply to the various Petitions is in course of preparation.

(66) *Capitation Grants.*

The Council and Organisation Committee have had to consider the duties conferred upon them by the new By-law as to Capitation Grants. Having regard to the definite instructions of the Representative Meeting, the Council, in distributing grants, will give attention to the average expenditure of each Branch for the previous three years, and the merits of the work done. Having regard also to the indication of opinion of the Meeting, that the accumulation of surpluses in the hands of Branches is to be avoided, it is considered that, in future years, regard should be had to surplus funds in the hands of Branches.

For the present year, grants have been made of at least 2s. per head to all Branches in the United Kingdom whose average expenditure for the last three years is not less than this amount.

To those Branches whose average expenditure has been less than 2s. per head of the membership, a grant has been made of the amount of the average expenditure for the past three years.

Branches have been notified that the Council will be prepared to take into consideration applications for further grants, on being satisfied that such further grants are required to enable the Branches applying, and their Divisions, to carry out their work satisfactorily.

The above statement applies only to the Branches in the United Kingdom, grants to the Colonial Branches having been made, as in previous years, at the rate of 4s. per member who has paid the full subscription for the year, and 2s. per member elected after July 1st.

In considering the analysis of expenditure of Branches and their Divisions in the United Kingdom for the years 1906-7-8, the Council finds that certain Branches have failed to furnish Reports for the years stated. It also finds that in certain cases the accounts show payments which, according to the opinion of the Solicitor to the Association, cannot lawfully be made out of the grants received by Branches from the funds of the Association.

Understanding that in some cases Branches retain in hand balances of funds which were their property before the adoption of the present Articles of Association, and which, therefore, they are free to spend at their discretion, and that such balances are in some cases not separately distinguished from the funds derived from Capitation Grants, the Committee has addressed enquiries to the Branches in question, but the information obtained in response does not

clear up the doubt upon these points. A circular has been issued informing Honorary Secretaries of Divisions and Branches of the legal position.

As regards failure of Branches to make the Report required by the Regulations of the Association, the Council has decided that it will in future make no grant to a Branch which has not furnished its Report of expenditure for the previous year.

(67) *Circular to Non-Members.*

The Representative Meeting at Sheffield approved of the preparation of a circular to members of the Profession who were not members of the Association, drawing attention to the work which is being done by the Association for the Profession. The Council, however, in view of the approval by the Representative Meeting of the Report on the Ethics of Consultation, has decided that a Prospectus of the objects and work of the Association for circulation to newly qualified Medical Practitioners should be prepared, to include the Report on Ethics of Consultation. This Prospectus, now in process of preparation, will necessarily cover much of the same ground as the circular approved by the Representative Meeting last year, and will supersede it.

(68) *Scheme of Probable Dates for Matters referred to Divisions.*

The Representative Meeting requested the Council to consider the possibility of the preparation of a Scheme of Probable Dates by which Divisions will receive from the Council the various matters for consideration during the year.

The Council begs to report that as this is a matter which specially affects Secretaries of Divisions, it has been decided to refer it to the Annual Conference of Secretaries at Belfast. The subject has accordingly been placed upon the Agenda of that Conference.

(69) *Organisation of the Profession.*

The Council has considered the following resolution of the Representative Meeting:—

173. That the suggestion be considered that an arrangement be made whereby the Medical Secretary could give an address each year in Medical Schools on the organisation of the Profession.

and reports that in the opinion of the Council the suggestion contained in Minute 173 is impracticable, but that the possibility of making arrangements for approaching medical students directly is under consideration.

(K) PREMISES COMMITTEE.

(70) Your Council is gratified to report that after an absence of nineteen months it obtained possession of the new and enlarged premises in November last. The Premises Committee devoted much time and thought to secure for the Association a convenient and well equipped Home. Many questions affecting neighbouring properties have had to be met, as any infringement of "ancient lights" and other existing privileges are zealously guarded. There has been some delay in replacing the Library books, otherwise the new Home of the Association is in working order. The moving to and from the temporary premises while the rebuilding was carried on involved considerable care and organisation to enable the regular publication of the BRITISH MEDICAL JOURNAL, and to ensure that the other business of the Association should go on undisturbed. In this connection your Council took the opportunity of commending Mr. Elliston for the efficient manner in which he had organised and carried out the necessary arrangements. Your Council believes the Committee rooms and general arrangements will eventually make for greater economy, efficiency, and for the general comfort of the Members. It is with some regret that the Council reports it has not yet succeeded in letting the ground floor and basement of the premises. At the present time there is a marked and serious depression in all London shop property, and for this reason it may be wise to hesitate before hurriedly entering into any agreement covering a

long term of years. Your Council is alive to the financial importance of obtaining suitable and substantial tenants at the earliest opportunity, and has every confidence that, with the revival of trade, shops in so favourable a position must command a rent that will fully justify the whole rebuilding scheme.

(L) PUBLIC HEALTH COMMITTEE.

(71) The Public Health Committee has held three meetings since the last Annual Representative Meeting.

ACTION TAKEN UNDER INSTRUCTIONS OF THE REPRESENTATIVE MEETING.

(72) *Whole-time Medical Officers of Health.*

A Memorandum on the subject referred to in the following Minute of the Representative Meeting was circulated to the Divisions in January (see *BRITISH MEDICAL JOURNAL* Supplement, 23rd January, 1909):—

Minute 193.—Resolved unanimously: That it be an instruction to the Council to refer the following proposition to the Divisions, namely:—

That Health Officers should give their whole time to the work.

The Committee is not yet in a position to report, only 43 Divisions out of a possible 204 having replied up to the present.

(73) *Security of Tenure for Medical Officers of Health.*

Minute 692.—That the Representative Meeting authorises the Council to assent, on behalf of the Association, to such a decision of the question of giving security of tenure to all Health Officers, or to whole-time Officers only, as would be most conducive, in the opinion of the Council, to the interests of the profession and of the public.

In co-operation with the Incorporated Society of Medical Officers of Health, efforts were made to secure that the principle of security of tenure of Medical Officers of Health should be incorporated in the Housing, Town Planning, &c., Bill introduced last Session. During the discussion in Grand Committee the Bill was amended, with the approval of the President of the Local Government Board, by the insertion of a provision for Security of Tenure for Medical Officers of Health of County Councils. The Bill was withdrawn at the close of the Session, but introduced this year, as amended in Grand Committee, and has, after a Second Reading, been sent to a Committee of the whole House. No provision being made in the Bill giving similar security to District Medical Officers, whose duties and responsibilities are, nevertheless, increased by it, steps have been taken to ensure that their position shall be brought before the House. The support of the Parliamentary Labour Party has been promised, as well as that of certain private Members of great influence, including the Right Hon. A. Lyttelton and the Right Hon. Sir Walter Foster.

(74) *Medical Officers of Health in Relation to Inspection of School Children.*

Minute 720.—That the practice of engaging Medical Inspectors of Schools under the disguise of Assistants to the Medical Officer of Health should be prevented, unless a sufficient remuneration be given, and that it be an instruction to the Council to give effect to this resolution.

Minute 724.—That in those cases where a Medical Officer of Health has to perform the additional duties of Medical Inspector of School Children, he should receive increased remuneration.

(That this be held to apply only to part-time appointments.)

Minute 725.—That it is undesirable that a full-time Medical Officer of Health should have added to his duties the duties of Medical Inspector of School Children.

The above Resolutions have been noted by the Committee as instructions in dealing with cases of appointments of the kind referred to.

In reference to Minute 720, the Council adopted the following definition of the Association's position, which has already been submitted for the consideration of the Divisions in the Medico-Political Committee's Report on Medical Inspection of School Children:—

"That the duties of the office and the general arrangements should be such as would enable the holder to base a claim for an appointment elsewhere as Medical Officer of Health upon the experience gained in this office.

It would appear *prima facie* that one condition of this should be that he should not be the Officer merely of the Education Committee, but of the Sanitary Committee of the Corporation."

The Association has been called upon to intervene in questions of appointments of Medical Officers of Health or Assistant Medical Officers of Health in relation to Medical Inspection, at Burnley, Colchester, Herefordshire, and Wigan. Details of the action taken will be furnished to the Representative Meeting.

(75) *Castleford Case.*

The Council referred to the Yorkshire Branch Council for such action as it might consider desirable, the subject of the following Resolutions:—

Minute 761A.—That this Meeting, having heard the circumstances of the resignation of two District Medical Officers at Castleford, and their dismissal from the posts of Public Vaccinator, expresses its approval of the action of these officers in resigning, and its sympathy with them in their dispute with the Guardians; that this Meeting strongly deprecates the action of those who accepted the vacant appointments in the face of the unanimous decision of the whole Medical Profession in the district to support the action of the two officers.

Minute 762.—That it be an instruction to the Council to consider the above motion; that if satisfied as to the facts, they publish the motion on behalf of the Association, and that the matter be dealt with as one of urgency.

It being clear that the difficulties in dealing with this case in the first instance had arisen from the disorganisation, of the Wakefield and Doncaster Division, in whose area Castleford lies, the Council of the Yorkshire Branch has been asked to consider this question also.

(76) *Vaccination.*

Minute 185.—That it be an instruction to the Council to take vigorous action to press the Oxford Resolutions on the Government.

Minute 192.—That it be an instruction to the Council to actively press upon the Government the Resolutions of the Association in respect of Vaccination.

The Council decided, in October, 1908, that a deputation should be appointed to press these Resolutions on the Government. On the advice of the Committee at its January meeting the Council decided that, having regard to other important Parliamentary business engaging the attention of the Association, it would be advisable to defer any representations to the Government.

(77) *Public Health and Poor-Law Appointments.*

The following is a list of other cases in which action has been taken in respect to Public Health and Poor-Law appointments:—Alsager (Medical Officer of Health), Aston (Public Vaccinators), Bilston (Medical Superintendent of an Isolation Hospital), Braemar (Parochial Medical Officer), Doeking (Public Vaccinators), Driffield (Poor-Law Medical Officer and Public Vaccinator), Honiton (Public Vaccinators), Walsail (Lady Health Visitor), and Worthing (Medical Officer of Health).

(M) SCIENCE COMMITTEE.

(75) *Development of the Science Work of the Association.*

The Science Committee has held three meetings since the Annual Representative Meeting, 1908.

The Committee has carefully considered during the past session the possibility of the development of the scientific work of the Association, particularly in connection with the Library, and as regards the encouragement and assistance of the scientific work of the Divisions and Branches.

(79) *The Library.*

Believing that the Association can render no greater assistance to its Members in their professional work than by giving them facilities of access to scientific literature, the Committee has recommended, and the Council has approved, that a special character should be given to the Library of the British Medical Association by its conversion as far as possible into a lending library so as to be available to the provincial members of the Association.

As a first step to give effect to this decision the Council has instructed the Science Committee to form a collection of Monographs and Periodicals which should be lent, under conditions approved by the Council, to members engaged in special researches. The Committee has also been instructed to collect all necessary information bearing upon the conversion of the Library into a lending library, and the Branches and Divisions have been requested to assist the Committee by furnishing such information and suggestions as may be in their power. The question of the development of Libraries for Branches and Divisions is also under consideration, and the Branches and Divisions have been informed that the Council, when exercising the discretion conferred upon it, by the alteration of the By-laws in 1908, as to the amounts of capitation grants to Branches, will have regard to the expenses of the scientific work of those bodies and of their Divisions (including expense of local libraries) and will make supplementary grants on these grounds when desirable.

(80) *Scientific Work of Divisions and Branches.*

Considering that it would be advantageous, both as giving a more definite purpose to the scientific discussions in Division meetings, and as tending to create greater interest among the members generally in the work of the Sections at the Annual Meeting, if the Sections and the Divisions could be brought into co-operation, the Council has approved the following Recommendations:—

- (i.) That the programmes of forthcoming discussions in the Sections at the Annual Meeting be furnished at the earliest possible date to Honorary Secretaries of Divisions, and that it be suggested that they select from such programmes those subjects which are, in their opinion, suitable for preliminary discussion by their Divisions.
- (ii.) That the officers of each Section be asked to report as to any subjects contained in the programmes of their respective Sections, of which, in their opinion, the consideration by the Divisions, prior to the Annual Meeting, would be specially useful.
- (iii.) That the Divisions should be invited to suggest, through the Central Science Committee, subjects for consideration by Sections at the Annual Meeting.

It has been suggested to the Branches composed of several Divisions that the scientific work of the Divisions may be facilitated by the formation of Branch Science Committees having some or all of the following duties and powers:—

- (a) Organising the scientific meetings of the Branch;
- (b) Considering information as to the scientific work of the Divisions contained in their Annual Reports to the Branch, and advising the Branch Council thereon;
- (c) Assisting the Divisions in the organisation of their scientific work by:—
 - (i.) Advising Division Committees, when desired, in the organisation of meetings;
 - (ii.) Preparing a list of speakers willing to give addresses on special subjects;
 - (iii.) Organising special local enquiries, e.g. as to the hygiene of local industries or conditions.

(81) *Science Scholarships and Grants.*

The Ernest Hart Memorial Scholarship, value £200, was awarded to John Pool McGowan, M.B., Ch.B., for a further period of one year for his researches in connection with Blood Immunity and kindred problems.

Three Scholarships of the value of £100 each were awarded to Willoughby Henwood Harvey, M.B., Pharmacological Laboratory, Cambridge, for research in Pathology and Pharmacology; Ernest Lawrence Kennaway, B.A., M.B., B.C., Lister Institute, for research in Physiological Chemistry, and Otto May, M.A., M.B., B.C., University College Hospital, for research in Neurology.

The Grants in aid of research work amounted to £349, and were made to 30 applicants in sums ranging from £4 to £20.

The Standing Orders as to Scholarships and Grants have been thoroughly revised during the year.

The Council is greatly indebted to those gentlemen who have assisted the Science Committee by acting as Inspectors of the work of Scholars and Grantees.

(N) SCOTTISH COMMITTEE.

(82) The Scottish Committee held two meetings during the year, one at Glasgow on October 12th, 1908, and one at Perth on April 8th, 1909.

At the meeting of October 12th, 1908, the reports from the Scottish group of Branches, relative to the scheme of election of the four new members of the Central Council, were received and approved. At this meeting, a Sub-Committee was appointed to consider and take action regarding the recommendations of the Royal Commission on the care and control of the Feeble-Minded, as affecting Scotland. This Sub-Committee held two meetings, one on December 9th, when the recommendations of the Commission were fully discussed, and a memorandum was drawn up embodying the points on which the Sub-Committee considered concerned the medical profession in Scotland. It was proposed to arrange a meeting of the Sub-Committee and the General Board of Lunacy to discuss the recommendations of the Royal Commission with the Board.

The memorandum of the Sub-Committee was sent to the General Board, but correspondence with the Secretary elicited the fact that owing to some of the subjects referred to by the Sub-Committee being still under the Board's consideration, they—the Board—thought it premature to discuss them, as they related to matters in regard to which there were at present no definite proposals for legislation. The Board stated that they would be glad to have in writing any views which the Sub-Committee might desire to bring under their notice, and would carefully consider any suggestions which might be made to them. At a subsequent meeting of the Sub-Committee held on February 26th, 1909, it was resolved to report to the Scottish Committee that no further action was meantime necessary, and to recommend the Committee to give instructions to watch the matter.

At the Committee Meeting on April 8th, it was resolved that the Midwives Act, as at present in force in England,

should not be extended to Scotland, and that the Council should be asked to oppose any such extension. The Committee agreed to recommend the Council to support the principle of separate Registration of Nurses in Scotland, as embodied in the Bill introduced by Mr. Cleland, M.P., and also that any Bill which does not provide for reciprocity of registration within the United Kingdom should be opposed.

(O) THERAPEUTIC COMMITTEE.

(83) The Therapeutic Committee reports that the experimental investigation on the action of substances recommended as substitutes for cocaine, referred to in the last report to the Council as having been undertaken by the Committee has been completed, and forwarded to the Secretary of the Association.

The Committee notes with pleasure that since the 1st April meeting of the Council, the report of the Committee on the Revision of the British Pharmacopœia has been published in the JOURNAL, and that a copy has been sent to the General Medical Council.

The Committee is of opinion that the following subjects urgently require investigation :—

1. The relative value of Salicylic preparations.
2. The relative bactericidal action of Cresols and allied substances, and the best means of employing them.
3. A method of determining the activity of Cannabis Indica preparations.
4. The action and relative value of compounds of Bismuth and their preparations.
5. The relative value of the so-called Urinary Antiseptics.
6. The relative value of the various substances used as bases for ointments and similar preparations.

(P) UTERINE CANCER COMMITTEE.

(84) The Uterine Cancer Committee has held two meetings since the Annual Representative Meeting, 1908.

At the Section of Obstetrics and Gynaecology, Annual Meeting, 1907, the following resolution was carried :—

“That the Council of the British Medical Association be requested to appoint a Committee to consider the best means of disseminating knowledge of the importance of the early recognition of Uterine Cancer.”

The Council at its meeting of January 29th, 1908, appointed a Special Committee, which drew up a draft Report, presented to the Section of Obstetrics and Gynaecology at Sheffield. The Section passed a resolution approving generally of the draft Report and requesting the Council to reappoint the Committee to complete its work. The Committee was re-appointed in October, and has since then revised and completed two Appeals to promote the earlier recognition of Uterine Cancer, one addressed to Medical Practitioners, the other to Nurses and Midwives. Enquiries made from institutions supplying nurses and midwives for work amongst the poor show a desire on the part of many of them to co-operate with the Association in disseminating the Appeal.

It is hoped that the work of the Committee will be completed in time for report to the Representative Meeting at Belfast.

EDMUND OWEN,
Chairman of Council.

28th April, 1909.

(PRESENT) BY-LAWS RELATING TO COUNCIL.

COUNCIL.

23. Composition.

The Council shall come into office on the first day of the Annual Meeting, and shall be composed of the Officers and ex-Officer named as Members of the Council, *ex officio*, in Article XXXVIII of the foregoing Regulations, together with the Members duly elected or appointed by the Branches and other bodies authorized by the By-laws to elect or appoint Members of the Council, and of Members annually co-opted by the Council in manner hereinafter provided. The Council may also elect, if it think fit, at any of its meetings all or any one of the following—namely: One medical officer on the active or retired list of each of the following services: The Royal Navy Medical Service, the Royal Army Medical Service, and the Indian Medical Service, provided that in each case such medical officer shall not have retired from the active list more than five years previously.

24. Branch Representation.

Any Branch, or group of Branches, having an aggregate membership of not less than 200 may elect one Member of Council, and any Branch, or group of Branches, having an aggregate membership of not less than 400 may elect two Members of Council, and an additional member for each complete 600 Members in excess of 400. Branches in the United Kingdom having less than 200 Members shall be grouped for this purpose with neighbouring Branches, unless in the opinion of the Council the special conditions of any such Branch justify the grant of separate representation. The grouping of Branches not within the United Kingdom for the purpose of electing Members of Council shall be determined by the Council, provided that the total number of Members of Council whom such Branches are entitled to elect shall not be less in proportion to the total membership thereof than those elected by the Branches in the United Kingdom.

25. Election of Representative Members of Council by Branches.

The elective Members of Council shall be elected by voting papers sent to each elector by post. Candidates may be nominated by any Division of a Branch, or by such number of Members of the Branch as the Rules of the Branch may prescribe. Nominations shall be sent, in writing, to the Secretary of the Branch on or before an appointed day, of which not less than fourteen days' notice shall have been given by him in the BRITISH MEDICAL JOURNAL. The names of all candidates so nominated shall be placed in a list which it shall be the duty of the Secretary to circulate to every Member of the Branch.

In any case in which Branches are grouped for representation on the Council, the above provisions shall be carried out as though the Branches so grouped formed one Branch, and it shall be the duty of the Secretary of the Branch having the largest membership to carry out the requirements of the By-law.

26. Term of Office of Branch Representatives (United Kingdom).

Each Member of Council elected by a Branch in the United Kingdom shall be elected for one year, and at the end of that time shall be eligible for re-election unless he have served as such Member of Council for six years successively, in which case he shall for one year be ineligible for election as such Member of Council.

27. Term of Office of Members Elected by Branches, not within the United Kingdom, or by the Services.

Each Member of Council elected by a Branch not in the United Kingdom, or by the Royal Naval Medical Service, the Army Medical Service, or the Indian Medical Service, shall be elected for such period, not exceeding three years, as the electing Branch or Body may determine, and at the expiration of such period shall be eligible for re-election, provided that no such Member shall be re-elected so as to make his period of continuous service as a representative Member of Council exceed eight years.

28. *Qualification.*

No person shall be eligible for election as a Member of Council by a Branch in the United Kingdom unless at the time of his election he shall be a Member of such Branch. The eligibility for election as a Member of Council by a Branch not in the United Kingdom shall be such as may be determined by the Rules of the said Branch, and if no such Rule shall be adopted the regulations as to eligibility shall be the same as for the Branches in the United Kingdom.

29. *Election Return.*

The return of the election of each elective Member of Council shall be communicated in writing to the Secretary of the Association by the President or Secretary of the Branch by which he is elected not less than twenty-eight days prior to the Annual General Meeting of the Association.

30. *Powers of Incomplete Council.*

In default of and until election of a Member or Members by any Branch or other Body authorized to elect, or so far as such election shall not be complete, all the powers conferred on the Council shall belong to and be exercised by the *ex officio* Members thereof alone, or by the *ex officio* Members and such other Members of the Council as may have been duly elected by any Branch or Branches or other Bodies authorized to elect.

31. *Vacancies.*

Any casual vacancy occurring in the Council, not less than four months before the Annual General Meeting, may be filled up by any Branch or Body the representation of which may have become vacant, and such election shall be conducted in the same manner as the annual election, or in respect of election by a Branch, in such other manner as may be prescribed by the Rules of the said Branch. Any person so chosen shall retain his office so long only as the Member in respect of whom such casual vacancy may have occurred would have retained the same.

32. *Co-opted Members.*

The Council shall have power each year to add to its own number Members in the proportion of one for every complete ten representative Members elected to serve on the Council for that year. Each such co-opted Member shall vacate such office at the close of the last meeting of the Council for the year, but shall be eligible for reappointment, unless he shall have been appointed in each of the last five years, in which case he shall be ineligible for the ensuing twelve months.

33. *Council Proceedings.*

The Council shall meet not less than four times a year, and shall be presided over by the Chairman of the Council, or in his absence by a Chairman to be appointed by the Meeting. Its meetings shall be held at such time and place as the Council shall appoint. Fifteen Members shall form a Quorum.

34. *Special Meeting.*

The Chairman of Council may, if he think fit, and shall, upon receiving a requisition signed by not less than fifteen Members of the Council and specifying the business for which a Special Meeting is required, call together a Special Meeting thereof. No business shall be transacted at a Special Meeting other than that for which such Meeting is called.

35. *Reports.*

The Council shall annually prepare a Balance Sheet and Financial Statement of the Association for the past year, to be presented to the Annual General Meeting of the Association, and an estimate of the probable income and expenditure of the Association for the coming year, and a Report of the general state and proceedings of the Association for the past year to be presented to the Annual Representative Meeting. A copy of such Statement, Estimate, and Report shall be sent to the Secretary of every Branch and Division, and published in the JOURNAL not less than two months before the Annual Meeting.

In addition to the above-mentioned report, the Council shall have power to present to any Annual Representative Meeting such further report or reports as it may deem advisable, and the same shall be published in the JOURNAL if time permits.

36. *General Powers.*

The Council shall, in addition to the powers and authorities by the Articles and By-laws expressly conferred on it, exercise all such powers and do all such acts or things as may be exercised or done by the Association, and are not by Statute or by the Articles or By-laws expressly directed or required to be exercised or done by the Association in General Meeting or by a Representative Meeting, subject nevertheless to the provisions of the Statutes and to the Regulations and By-laws of the Association and to the instructions contained in those Resolutions of General or Representative Meetings which by the Articles are declared to be deemed decisions of the Association.

BY-LAWS RELATING TO COUNCIL (UNDER DRAFT CHARTER).

SECTION VI.

COUNCIL.

Composition.

37. The Council shall be composed of the Members *ex officio* mentioned in the Ordinances and of Members elected in manner following, namely:

- (a) 24 by the Branches and Divisions of the Association in the United Kingdom which shall be grouped for that purpose as hereinafter mentioned;
- (b) 7 by the Branches of the Association not in the United Kingdom which shall be grouped for that purpose as hereinafter mentioned;
- (c) 12 by the elected Representatives of the Constituencies comprised in the Branches and Divisions of the Association in the United Kingdom which Branches and Divisions shall be formed for that purpose into 12 Groups as hereinafter mentioned, the Representatives of all the Constituencies in each such Group being entitled together to elect one Member of Council;
- (d) One Medical Officer on the active or retired list of each of the following Services, namely: The Royal Navy Medical Service, the Army Medical Service, and the Indian Medical Service, to be elected by the Representative Body from officers nominated by the Council but so that no Officer shall be elected who shall have retired from the active list more than five years before the election.

Grouping of Branches.

38. Until the holding of the first Annual Representative Meeting after the grant of the Charter, the grouping of the Branches and Divisions for the purpose of the election of Members of the Council by Branches and Divisions and by Representatives of Constituencies shall be such as shall be prescribed by the Council and thereafter shall be such as shall from time to time be prescribed by the Representative Body.

Mode of Election by Groups in the United Kingdom.

39.—(1) The election of 24 Members of Council by the Branches or Groups of Branches and Divisions in the United Kingdom shall be by means of voting papers sent by post by the Association from the Head Office to each Member of every Branch comprised in the Group.

(2) The said voting papers shall contain the names of those candidates who have been nominated, either (a) by a Division, or (b) in writing signed by not less than three members of any such Branch, and sent to the Association at the Head Office on or before an appointed day, of which

not less than fourteen days' notice has been given in the JOURNAL.

(3) The said voting papers shall contain such other particulars (if any) and shall be sent to the Association at the Head Office within such time as the Council may from time to time prescribe by notice given as aforesaid.

(4) The expenses of the said election shall be borne by the Association.

Mode of Election by Groups not in the United Kingdom.

40.—(1) The election of seven Members of Council by the Groups of Branches not in the United Kingdom shall be by voting papers sent by post by the Secretary of each Branch comprised in the Group to each member of that Branch.

(2) The said voting papers shall contain the names of those candidates who have been nominated either (a) by a Division, or (b) in writing signed by not less than three members of any such Branch, on or before an appointed day of which such notice shall have been given in the JOURNAL as the Rules of the Branch may prescribe.

(3) The said voting papers shall contain such other particulars (if any) and shall be sent to such one of the said Secretaries (hereinafter called "the Returning Officer") and within such time as the Council may from time to time prescribe by notice given as aforesaid.

(4) It shall be the duty of the Returning Officer to count the votes given for each candidate and to make a return of the result of the election to the Association at the Head Office.

(5) The expenses incurred by each Branch in respect of the election shall be borne by the Association.

Mode of Election by Representatives of Constituencies.

41. Until the holding of the first Annual Representative Meeting after the grant of the Charter, the mode of election of 12 Members of Council by the Representatives of Constituencies shall be such as shall be prescribed by the Council and thereafter shall be such as shall be prescribed by the Representative Body.

Qualification.

42. No person shall be eligible for election as a Member of Council to represent a Branch or Group of Branches in the United Kingdom (whether the election be by the Branch or Group or by the Representatives of Constituencies) unless at the time of his election he shall be a Member of that Branch, or of a Branch comprised in that Group.

Term of Office of Members of Council elected by Branches.

43.—(1) Each Member of Council elected by a Branch or Group, or by the Representatives of Constituencies in the United Kingdom, shall hold office for one year, and at the end of that time shall be eligible for re-election, unless he have served as the representative on the Council of one and the same Branch or Group for six years successively, in which case he shall for one year be incapable of being elected as such representative.

(2) Each Member of Council elected by a Branch or Group not in the United Kingdom, or elected to represent the Royal Navy Medical Service, the Army Medical Service, or the Indian Medical Service, shall hold office for such period, not exceeding three years, as the electing body may determine, and at the expiration of such period shall be eligible for re-election, provided that no such Member shall be re-elected so as to make his period of continuous service as the Representative on the Council of one and the same Branch or Group exceed six years.

(3) Each of the terms of office mentioned in this By-law shall be calculated from the close of an Annual Representative Meeting.

Completion of Council.

44. The proceedings for the election of Members of Council shall be conducted in such manner and at such times as to secure that a complete Council shall be in office at the close of the Annual Representative Meeting of each year.

Powers of Incomplete Council.

45. In default of and until election of a Member or Members by any body authorized to elect, or so far as such election shall not be complete, all the powers conferred on the Council shall belong to and be exercised by the Members *ex officio* thereof alone and such other Members (if any) of the Council as may have been duly elected by bodies authorized to elect.

Casual Vacancies.

46. Any casual vacancy occurring in the Council not less than four months before the Annual Representative Meeting amongst the Members of Council elected by Representatives of Constituencies shall be filled by the Chairman of Representative Meetings. Any other vacancy which may so occur shall be filled up by the body which appointed the Member of Council whose place shall have so become vacant, and the election to fill such last-mentioned vacancy shall be conducted in the same manner as the annual election. Any person so chosen shall retain his office so long only as the Member in whose office such casual vacancy shall have occurred would have retained the same if such vacancy had not occurred. The provisions of this clause shall apply as well to the Members forming the first Council of the Association in pursuance of the Charter as to Members subsequently taking office.

Proceedings.

47. The Council shall meet not less than four times a year, and shall be presided over by the Chairman of the Council, or in his absence by a Chairman to be appointed by the Meeting from its own number.

48. Meetings of the Council shall be held at such time and place and upon such notice as the Council shall appoint.

49. No business shall be transacted at any Meeting of the Council unless at least fifteen Members be present.

50. The Chairman of Council may, if he think fit, and shall, upon receiving a requisition signed by not less than fifteen Members of the Council, and specifying the business for which a Special Meeting is required, call together a Special Meeting thereof. No business shall be transacted at a Special Meeting other than that for which such Meeting is called.

EXTRACT FROM PART VI OF FINANCE INQUIRY REPORT.

(See page 233 of Minutes of Annual Representative Meeting, 1908.)

With regard to the first two recommendations the Committee thinks it desirable briefly to explain the grounds upon which they are put forward. Upon consideration of the development and of the present nature of the work of the Association, it is clear to the Committee that the secretarial work falls naturally into two general departments—namely, that of business management and that which has to do with the professional work of the Association—that these departments are of equal importance, and that they should have at their head officers of co-ordinate rank. This recommendation not only expresses what is desirable in the interests of efficient administration, but is also in accordance, practically if not formally, with the actual existing position of the General and Medical Secretaries respectively, which has been arrived at as the result of the successive decisions of the Council stated in the memorandum of the Medical Secretary appended to this report.

The term "General" Secretary, however, as applied to the officer who deals with the business side of the secretarial work of the Association is, in the opinion of the Committee, inappropriate, inasmuch as it implies a general supervision of the work of the Association, which does not in fact exist, and which under present conditions would be impracticable. The Committee recommends, therefore, that this title should be altered, and suggests the designation "Financial Secretary" as corresponding more closely with the nature of the duties of the office.

SCHEDULE TO (PRESENT) BY-LAWS.

STANDING COMMITTEES REFERRED TO IN BY-LAW 41.

Name of Committee.	Appointed Members.			Members, <i>ex officio</i> .	Additional Members, <i>ex officio</i> .	Quorum.	Duties, Powers, &c.
	Appointed by Representative Meeting.	Appointed by Council.	Otherwise appointed.				
1.	2.	3.	4.	5.	6.	7.	8.
(1) Journal and Finance	..	Not exceeding 11.	..	President, Chairman of Representative Meetings, Chairman of Council, Treasurer.	..	5	To examine into the general working of the office and of the JOURNAL, and to certify the quarterly accounts prior to their being presented to the Council.

Irish	The Secretary of each Irish Branch. All the members of the Council who represent Irish Branches.	1 member or, if the Secretary of the Branch is a member of the Council, 2 members appointed by each Irish Branch. Any member specially appointed by the Leinster Branch or by the Ulster Branch shall be a practitioner not resident in Dublin or Belfast.	To consider all matters specially concerning Ireland. It shall have an Honorary Secretary, resident in Ireland, and shall meet at such place and time as the Committee may itself direct. This Committee shall have power to add to its number not more than 3 Members to represent districts which are not otherwise represented thereon.

British Medical Association.**GRANTS AND SCHOLARSHIPS FOR
SCIENTIFIC RESEARCH.
GRANTS.**

THE Council of the British Medical Association is prepared to receive applications from members of the Medical Profession for Grants in aid of Researches for the Advancement of Medicine and the Allied Sciences.

The Grants are made subject to the following conditions:

1. That the work of the Grantee shall be subject to inspection by the Science Committee of the Association.

2. That each Grantee shall furnish to the Science Committee, on or before May 15th following the allotment of the grant, a report (or, if the object of the grant be not then attained, an interim report, to be renewed not later than the same date in each subsequent year until the final report is presented) containing:

(a) A statement, in a form satisfactory to the Science Committee, of the results arrived at, or the stage which the inquiry has reached;

(b) A statement of expenditure incurred, accompanied by vouchers as far as possible;

(c) A reference to any Transactions, Journals, or other publications in which the results of the research have been announced.

SCHOLARSHIPS.

The Council of the British Medical Association is also prepared to receive applications for Research Scholarships, as follows:

1. An ERNEST HART MEMORIAL SCHOLARSHIP, of the value of £200 per annum, for the study of some subject in the department of State Medicine.

2. THREE RESEARCH SCHOLARSHIPS, each of the value of £150 per annum, for research in Anatomy, Physiology, Pathology, Bacteriology, State Medicine, Clinical Medicine, or Clinical Surgery.

Each Scholarship is tenable for one year, but is renewable by the Council, provided that the whole period of tenure shall not exceed three years.

The Scholarships are awarded subject to the following conditions:

1. That the work of the Scholar shall be subject to inspection by the Science Committee of the Association.

2. That he shall furnish the Science Committee, on or before May 15th following the grant of the Scholarship, with a statement of the work done by him.

3. That he sign an undertaking to abide by the above and other regulations affecting Scholarships, a copy of which will be supplied to him.

Applications.

Applications for Grants and Scholarships for the year 1909-10 must be made, not later than May 27th, 1909, in the prescribed form, a copy of which will be supplied on application to the Medical Secretary, 429, Strand, London, W.C.

Each application should be accompanied by a recommendation from the head of the laboratory in which the applicant proposes to work, setting out the fitness of the candidate to conduct such work and the probable value of the work to be undertaken. This is not intended, however, to prevent applications for Grants in aid of work which need not be performed in a recognized laboratory.

J. SMITH WHITAKER, *Medical Secretary.*

429, Strand, W.C., March, 1909.

Meetings of Branches & Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

LANCASHIRE AND CHESHIRE BRANCH: MANCHESTER (WEST) DIVISION.

THE annual meeting of this Division was held in the Technical Institute, Stretford Road, on Tuesday, May 11th. The following gentlemen attended the meeting: Drs. W. J. Cousins, J. D'Ewart, W. Eales, W. A. Helme, J. C. Mückler, J. C. Nichol, J. S. Prowse, L. E. Scanlon, W. Steele Smith, and F. H. Worswick.

Apologies for Non-attendance.—Apologies for non-attendance were received from Drs. E. W. Floyd and C. Stennett Redmond. Dr. F. H. Worswick presided.

Confirmation of Minutes.—The minutes of the last annual meeting and of the last general meeting were read and confirmed.

New Members.—The HONORARY SECRETARY announced the election of two new members—namely, Dr. Robert Boyd and Dr. G. C. McL. Barber.

Contributions to Hospitals by Employers and Employees.—As arising out of the minutes, the consideration of the Hospitals Committee's report on contributions to hospitals by employers of labour and employees, which had been postponed by the last ordinary meeting, was further deferred until after the Executive Committee shall have considered and reported thereon.

Correspondence.—A letter from the Corresponding Secretary of the Manchester and Salford Joint Committee in regard to resolutions submitted to that body by this Division was read. The meeting expressed satisfaction at the prompt action taken by the Joint Committee in respect to the suggestions put forward concerning (a) the medical libraries of Manchester, (b) the payment of medical practitioners called to attend street accidents, and (c) the official recognition of the Joint Committee as a responsible body. The Honorary Secretaries reminded members that the Medical Secretary had asked for information regarding a well-known local provident association, and reported the receipt of a remittance of £5 8s. for Divisional expenses from the Branch Council. In connexion with the latter, the Representatives of the Division on the Branch Council (Drs. Worswick and Prowse) gave an account of the action they had taken in regard to the Report of the Branch Organization and Finance Committee. The meeting signified approval of what had been done.

Letter from Organization Committee.—A letter from the Organization Committee, calling attention to certain restrictions in connexion with the expenditure of money derived from capitation grants, was read.

Candidate for Central Council.—A communication from Dr. Taylor of Salford, announcing his candidature for election to the Central Council of the Association, was read; and the following resolution was moved from the Chair, and agreed to unanimously:

That this meeting cordially supports the candidature of Dr. Taylor for election to the Central Council, and urges every member of the Division to vote for him at the forthcoming election.

Election of Officers.—The members of the Manchester (West) Division elected the following gentlemen as officers for the ensuing year: *Chairman*, Dr. S. Holgate Owen; *Vice-Chairman*, Dr. J. C. Mückler; *Honorary Secretaries*, Dr. J. Skardon Prowse, Dr. L. E. Scanlon; *Representative for Representative Meeting*, Dr. F. H. Worswick; *Chorlton Road, Manchester*; *Representatives on Branch Council*, Dr. F. H. Worswick, Dr. J. Skardon Prowse; *Executive Committee*, Drs. F. H. Worswick, E. W. Floyd, F. Farrow, A. W. B. Loudon, J. D'Ewart, T. G. Paterson, W. H. Richardson, A. M. Edge, J. C. Nichol, J. Cullen; *Representatives on the Joint Committee of the Manchester and Salford Divisions*, Drs. S. Holgate Owen, F. H. Worswick, J. C. Mückler, L. E. Scanlon, J. S. Prowse.

Report of Executive Committee.—The annual report of the Executive Committee was read and adopted.

Business of the Representative Meeting.—It was resolved unanimously that the Divisional Representative should have a free hand in voting on all subjects upon which the Division has not expressed an opinion.

Current Work of the Association.—The monthly reports of current work of the Association for April and May, and the subject of the representation of the local medical profession on boards of hospitals and similar bodies, were referred for the consideration of the Executive Committee, with instructions to report thereon to the next Divisional meeting.

Whole-Time Medical Officers of Health.—After considerable discussion on the report from the Public Health Committee on the desirability of health officers being required to give their whole time to the work, it was resolved:

That all medical officers of health should be debarred from engaging in private practice.

SOUTHPORT DIVISION.

THE annual meeting of this Division was held at the Temperance Institute on Friday, May 14th, Dr. GILL in the chair. There were also present: Drs. Anderson, Ashworth, Baildon, Mewburn Brown, Coutts, Littler, Russel, Speirs, Sykes, Walker, and Harris.

Confirmation of Minutes.—The minutes of the last annual meeting were read and confirmed.

Report of Executive Committee.—The annual report of the Executive Committee was read.

Election of Officers.—The following officers were elected: *Chairman*, W. Barwise; *Vice-Chairman*, J. H. Sykes, M.D.; *Honorary Secretary and Treasurer*, R. Harris, M.B.; *Representative for Representative Meeting*, S. A. Gill, M.D.; *Deputy*, R. Harris, M.B.; *Representatives in Branch Council*, P. Ashworth, M.D., and R. Harris, M.B.; *Executive Committee*, G. R. Anderson, S. A. Gill, M.D., R. M. Littler, and J. C. Russel, M.D.

Earlier Election of Representatives.—With a view to the earlier election of Representatives in Representative Meetings, a resolution:

That in Rule 7 the words "nine months" be substituted for "three months"

was carried unanimously.

Letter from Chelsea and Fulham Division.—A letter from the Chelsea and Fulham Division calling in question the action of the Council of the Royal College of Surgeons respecting the admission of women was read, and it was unanimously resolved:

That the letter lie on the table.

Departmental Committee re Midwives Act.—The purport of a letter from the Medical Secretary respecting the action taken by the Association in regard to the Departmental Committee re Midwives Act was communicated containing an inquiry as to touting and advertising by midwives. None of the members present had heard any complaints in this matter.

Medical Certification of Suitability of Patients for Hospitals.—The Hospitals Committee's report on medical certification of suitability of patients for hospital treatment was considered, and a resolution:

That a medical certificate of suitability for hospital treatment be required as a general rule as a condition of hospital treatment except in cases of casualties or emergencies

was carried unanimously.

Contributions to Hospitals by Employers and Employees.—The Hospitals Committee's report on contributions to hospitals by employers of labour and employees was considered, and after considerable discussion it was resolved unanimously:

That at the present time this Division does not consider it desirable that any steps should be taken to carry out the suggestions in this report.

Fresh Medical Institutions.—The motion contained in the statement respecting fresh public medical institutions was unanimously approved.

Sanatoriums for Workers.—The statements and resolution contained in the statement respecting sanatoriums for workers suffering from tuberculosis were also unanimously approved.

Representation of Local Profession on Hospital Boards.—The report on representation of local medical profession

on boards of hospitals and similar bodies was discussed, and it was unanimously resolved:

That we do not favour the motions by the Hampstead and Wandsworth Divisions.

Notices of Motion.—Various notices of motion in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL of April 24th were then considered. It was decided to instruct the Representative of the Division to support the motion by the Council respecting the mode of election of Council for the adoption of the By-laws 37 to 46 in the Schedule to the Draft Charter in substitution for the present by-laws of the Association on the subject. It was decided to leave the notices by the Liverpool (Western) Division respecting election of Representatives to the discretion of the Representative.

WARRINGTON DIVISION.

At the annual meeting held at the Warrington Infirmary, on Tuesday, May 11th, there were present Drs. BREMER (in the chair), Joseph, J.P.; Naden, J.P.; Edwards, Jago, Hunt, Ferguson, and Murray.

Election of Officers.—The following appointments were made: *Chairman*, Dr. Joseph, J.P.; *Vice-Chairman*, Dr. Edwards; *Honorary Secretary and Treasurer*, T. A. Murray; *Representative on Branch Council*, Dr. Burrows; *Executive Committee*, The Officers and Drs. Anderson, Bennett, and Bowden.

Resolutions.—Resolutions fixing dates of quarterly meetings, supporting candidature of Drs. Garstang, Larkin, Maché, and Taylor, and concerning a case of ethics, were passed.

Matters Referred to Divisions.—Several matters referred to Divisions were discussed and approved.

Votes of Thanks.—Votes of thanks were passed to the retiring officers.

THE ELECTION TO THE CENTRAL COUNCIL.

We are asked to publish the following letter addressed to the President of the Lancashire and Cheshire Branch:

51, Rodney Street,
Liverpool,
May 18th, 1909.

Dear Dr. Renshaw,—

After being a member of the Central Council of the British Medical Association for four successive years, I again solicit the honour of the support of the members of the Lancashire and Cheshire Branch in the election of Representatives to that body. I do not come before the members as a stranger. I have been a member of the Branch Council since 1892; I was a member of the old Parliamentary Bills Committee from 1898 till 1902; and I took an active part in urging the members in my neighbourhood to adopt the new constitution in 1902. As I am, therefore, well known to the majority of the members either personally or by reputation, I do not propose to attempt to promote my candidature either by circular or by addressing meetings, but I should like to address a few remarks to you in your capacity as President of the Branch with regard to my policy as a present member of the Council, and with regard to the prospects of the Association.

First let me disclaim any serious divergence of opinion as regards the policy expressed by my colleagues representing the Branch on the Council. I believe we are all working for the best interests of our profession, but I do not consider that four independent men can always hold views identically the same, or vote with mechanical uniformity. I do not consider myself a mere delegate, and I trust the Association will always choose as its representatives men of sufficient judgement and sense of responsibility that they may be trusted to form a sound and safe opinion on all important matters as they arise.

I consider that the great strength of the Association and its power for good lies in its comprehensiveness, in its including within its ranks all honorable members of our profession, whatever their line of practice may be. I notice with regret that up till now it falls far short of that ideal—that while the number of practitioners in the *Medical Directory* is 39,992, only 21,163 are members of the Association. Further, I notice a still more serious sign, namely, that the recruiting power of the Association diminishes year by year, while the expenses continually increase. Thus, in 1906 there was an increase in membership of 1,266; in 1907 of 131;

and in 1908 of only 39. Last year only £732 were carried to surplus, and the Treasurer's estimates for next year show a prospective deficit of £750. I feel that the urgent need of the Association, if it is to carry on in the future such good work as it has accomplished in the past, is to extend its membership and to economize its resources. To accomplish the first, I believe our mainstay must be the BRITISH MEDICAL JOURNAL, and my policy, as a member of the Journal and Finance Committee and in every way, has been to enhance its already high prestige, to endeavour to get eminent members of our profession interested in it, and to make it in every way a mirror of the medical life of the country. Another feature of the Association I am anxious to see retained and extended is the Branch organization, which has in past years been the backbone of the Association. While I consider the Divisional organization most useful and desirable, I consider the Divisions ought not to interfere with the larger corporate life of the Branches.

Finally, I am of opinion that every member of the Association ought to feel that he has the fullest opportunity of expressing his views on all important matters affecting the Association and the profession. Whether the present constitution is the best possible to effect that end is, I consider, a fair matter for discussion.

With regard to economy, I would much rather see the membership extended and the income increased than see any restriction on the activity of our various committees, but until the income is increased it is manifest some economies must be practised. I think something of this kind might be effected without any loss of efficiency by limiting the number of matters dealt with at any one time.

Among the more urgent matters which have to be considered, hospital abuse stands pre-eminent. While, in common with other sublimary affairs, an ideally-perfect system may not be attainable, I believe that it will not be long before the matter is dealt with in a satisfactory manner, since the interest, as well as the duty, of all concerned is to bring about such a solution. If the Branch does me the honour to re-elect me, I shall endeavour, as I have done in the past, to give my best and conscientious attention to all matters that come before the Council, bearing in mind that I am not a representative of any party, but of the whole Branch.

Believe me, dear Dr. Renshaw,

Yours very truly,

THOS. R. BRADSHAW, F.A., M.D.,
F.R.C.P.

METROPOLITAN COUNTIES BRANCH:

CHELSEA DIVISION.

A MEETING of this Division was held at 7 p.m., on May 5th, at the Trocadero Restaurant, the PRESIDENT, Dr. P. H. Parsons, in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Letters.—A reply was received from a practitioner to an inquiry made of him concerning an ethical matter, and the letter was ordered to be laid on the table. A letter was received from the Medical Officer of Health for Fulham with reference to unqualified practice in the district, and this was referred to the Executive Committee. Dr. Hamilton wrote resigning his position on the Public Medical Service Committee, and his resignation was accepted.

Apologies for Non-attendance.—Letters of apology on account of inability to attend this meeting were received from Drs. O'Sullivan, Satchell, Sinclair, Wells, Lindsay, and others. Various questions submitted to the consideration of the Division from head quarters were, on the proposition of the CHAIRMAN, referred to the Executive Committee.

Vote of Sympathy.—The CHAIRMAN moved that a letter of sympathy be sent to Dr. Bonney, a member of the committee, on account of his recent severe illness. Carried unanimously.

Public Medical Service.—Dr. MORRIS WILLIAMS moved the following resolution:

That steps be taken to inaugurate a Public Medical Service in Chelsea and Fulham, and that a committee, consisting of the CHAIRMAN, Secretary, Drs. Bedford, Edwards, Halley, Williams, and Young, be appointed to carry out the necessary details.

He said: In moving the resolution which stands in my name, so much has from time to time appeared in our eagerly read BRITISH MEDICAL JOURNAL on contract

practice that it will seem superfluous for me to occupy your time in further dilating on the subject. With all innovations of the kind in a body like ours it will be difficult for all to agree, but I think we all agree that contract practice as at present constituted is not satisfactory to either of the contracting parties. On the one hand the vendor has no voice in the allocation of his remuneration, his time, nor who he is to attend at that remuneration, and other matters are fixed for him by laymen, who do not understand anything of efficient medical service. The vendor, unless he is a philanthropist, in attempting to make a profit out of the contract, has to gamble in the life of the purchaser. This sample may have been all well in the days of quackery once practised by the general practitioner, which, I am sorry to say, is still rampant in Harley Street. In the present advanced and exalted state of the general practitioner, the public medical service must be entirely in the hands of the profession: (1) The object and constitution must be in our hands. (2) Who shall be admitted as subscribers must be in our hands, and what benefits they are to receive are to be defined by us. (3) The finance must be in our hands. The question will arise, Is it policy in Chelsea and Fulham district to have a public medical service? Undoubtedly it is, provided we have unity and good understanding among our members, so that we can make our own terms without fear of any of the profession becoming "blacklegs" and accepting clubs at any non-remunerating price. On the other hand, I believe that subscribers to clubs would appreciate the benefits accruing from such service. You must not be frightened for fear everybody in the district might become subscribers, and that you would lose your practice. I will give you figures that will make your mouth water: The population of our Division is 250,000. If every one joined at 5s. a year, the revenue would be £60,000 for the public medical service, without interfering with the emoluments of individuals from confinements, miscarriages, vaccinations, fractures, dislocations, consultations, anaesthetics, night and special calls, certificates, and illness caused by misconduct, etc.; and, if the £60,000 is not to your liking, we put on 1s., and bring ourselves in another £12,000. The motion was seconded and carried *unanimously*.

Dinner.—The members and their guests then enjoyed a sumptuous repast. The dinner committee, consisting of Drs. Bedford, Boyd, and Gardner, had arranged a musical programme, which was much appreciated. The toast list, in addition to the usual loyal ones, consisted of "The Chairman," proposed by Mr. Tanner in felicitous terms, and received with much enthusiasm; "The Visitors," proposed by Dr. EDWARDS and responded to by Mr. C. RYALL and Mr. BEDFORD; "The Public Medical Services," proposed by Dr. HAMILTON and responded to by Drs. JACKSON and C. T. PARSONS; and "The British Medical Association," responded to by the SECRETARY.

Address.—Just after the dinner an address on cancer of the tongue, demonstrated by lantern slides, was given by Mr. J. HOWELL EVANS, M.A., M.B., F.R.C.S. On the proposition of the CHAIRMAN, a hearty vote of thanks was accorded Mr. Howell Evans for his interesting address.

LAMBETH DIVISION.

The annual general meeting of this Division was held at Bethlem Royal Hospital on Thursday, May 6th, at 4 p.m., twenty-two members and one visitor being present.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Contributions to Hospitals by Employers and Employees.

—A matter referred to the Division from the Hospitals Committee, *re* contributions to hospitals by employers of labour and employees (vide BRITISH MEDICAL JOURNAL SUPPLEMENT, February 27th, 1909), was discussed, and Proposals (a) and (b) were agreed to as follows—namely:

(a) That the contributions to hospitals by employers of labour and employees, by means of weekly collections and otherwise, should be considered as being the payment of premiums for a proportionate insurance against liability for medical and hospital attendance in cases of serious illness and accident, which are made on behalf of those unable themselves to pay directly or adequately for the same, and not as entitling the contributors to unlimited hospital, as also gratuitous medical attendance, as at present seems to be claimed.

(b) That it be an instruction to the Central Hospitals Committee of the Association to endeavour, through the Divisions and otherwise, to obtain acceptance for this principle by the several parties concerned, with a view to elaborating some scheme whereby these contributions should be paid to the rightful parties—namely, insurance companies—who in their turn will proportionately recompense hospital and similar boards, hospital staffs, general practitioners, etc., for all attendances given on illnesses or accidents incurred by those so insured, reporting from time to time to this body.

Sanatoriums for Tuberculous Workers.—On the motion of Dr. CAPEs, seconded by Dr. STODDART, it was unanimously agreed:

That in the opinion of the Lambeth Division it is not advisable that members of the Association should in future accept, or continue to hold, appointments as honorary local medical referees to the National Association for the Establishment and Maintenance of Sanatoria for Workers suffering from Tuberculosis.

Letter from the Chelsea and Fulham Division.—A communication from the Chelsea and Fulham Division concerning the action of the Royal College of Surgeons in admitting women to its examinations contrary to the vote of the majority of the members was received.

Election of Officers.—The following officers for the ensuing session were then elected: *Chairman*, W. H. B. Stoddart, M.D.; *Vice-Chairman*, J. V. C. Denning, L.R.C.P.I.; *Honorary Secretary*, H. C. Cameron, M.D.; *Representative at Representative Meetings*, R. Esler, M.D.; *Representative upon the Branch Council*, R. Capes, M.R.C.S., L.R.C.P., and *Honorary Secretary of the Division, ex officio*, *Executive Committee*, W. A. Atkinson, M.D., E. A. Edelson, M.B., M.R.C.S., W. E. Sturges-Jones, M.R.C.S., L.R.C.P., H. J. Spon, M.R.C.S., L.R.C.P., G. F. Grant, M.B., T. H. P. Peers, L.M.S.S.A., V. A. Jaynes, M.R.C.S., L.R.C.P.

Installation of New Chairman.—Dr. ATKINSON then addressed the meeting in a few appropriate words, and vacated the chair in favour of Dr. Stoddart.

Vote of Thanks to Retiring Chairman and Officers.—A hearty vote of thanks to Dr. Atkinson for the able and conscientious manner in which he had carried out his chairmanship during the past session, without being absent from a single meeting, either of the Executive Committee or of the Division, was carried by acclamation. Votes of thanks to the retiring officers were also carried unanimously.

Candidates for Central Council.—Dr. STODDART then asked the Division, first to support the nominees of the Wandsworth Division—namely, Drs. Ker, Shaw, Haslip, and Shadwell, and Sir Victor Horsley, to represent the Branch on the Central Council, and secondly, inviting those members of the Division who had votes to support the candidature of Mr. Lucas, of Guy's Hospital, for a place upon the Council of the Royal College of Surgeons.

Clinical Demonstration.—Both these proposals being agreed to unanimously, Dr. STODDART called upon Dr. Hyslop to give a clinical demonstration upon cases from the wards of Bethlem Royal Hospital. The meeting adjourned to the billiard room, where Dr. Hyslop gave a most interesting demonstration, which lasted for upwards of an hour.

Vote of Thanks.—A hearty vote of thanks to Dr. Hyslop for his demonstration and to the authorities of Bethlem Royal Hospital for their kind arrangements for the meeting were carried by acclamation, and the meeting adjourned at 6 p.m.

WESTMINSTER DIVISION.

An ordinary meeting of the Westminster Division was held at the Criterion Restaurant on May 6th, Dr. WILLIAM EWART presiding.

Dinner.—The members and guests first dined together, two lady doctors being present.

Paper.—Sir WILLIAM GOWERS, the guest of the evening, then read a paper on "The Premonitory Symptoms of Migraine," which was followed by an interesting discussion in which Drs. SEYMOUR TAYLOR, HARRY CAMPBELL, SAYILL, WILFRED HARRIS, and others took part.

Whole-time Medical Officers of Health.—On the reference from the Central Medico-Political Committee it was unanimously agreed that medical officers of health should not engage in private practice, but should devote the whole of their time to the duties of their office.

Hampstead Hospital.—Dr. DAUBER (Vice-President of the Division) raised the question of the delay in dealing with the Hampstead Hospital question, pointing out that the ex-Chairman of the Division (Dr. Knowsley Sibley) had suffered material loss by his loyalty to the Association in abiding by the terms of the "Warning Notice" and in refraining from applying for one of the vacant posts on the amalgamated North-West London and Hampstead Hospitals.

A resolution calling for immediate action was carried *velutine contradicte*.

Nomination of Officers.—The nomination of officers for the ensuing Association year was then considered, and the following names were unanimously adopted: *Vice-President of the Branch*, Dr. Knowsley Sibley; *Members of Central Council*, Sir Victor Horsley, Dr. Haslip, Dr. Harvey Hilliard, Dr. Kerr, Dr. Lauriston Shaw.

Votes of Thanks.—The meeting then terminated, after a hearty vote of thanks to Sir William Gowers for his interesting paper, and to the other speakers for being present and giving their experience.

SOUTH-EASTERN BRANCH:

MAIDSTONE DIVISION.

A MEETING of this Division was held at West Kent General Hospital, Maidstone, on Thursday, May 13th, at 3 p.m., Dr. C. E. HOAR in the chair. There were also present Drs. Ground, Oliver, Douglas, Killick, T. Joyce, Mapleton, Black, Shaw, Falwasser, Gibb, Parr-Dudley, Peyton, Dwyer, and G. Potts, Honorary Secretary.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Apologies for Non-attendance.—Mr. F. T. Travers and Dr. Ryan wrote regretting inability to attend.

New Members.—Drs. Dwyer and Peyton were welcomed as new members.

Paper.—Dr. PEYTON read a paper on Ménére's disease, and showed a case illustrating the same. The paper was discussed by Drs. HOAR, OLIVER, GROUND, JOYCE, DOUGLAS, and GIBB. Dr. Peyton was thanked for his interesting paper.

Whole-time Medical Officers of Health.—A letter was read from the Medical Secretary *re* whole-time medical officers of health. Dr. PARR-DUDLEY proposed and Dr. JOYCE seconded:

That this meeting approve of the principle of whole-time medical officers of health, provided there be an appropriate remuneration and a permanence of tenure.

Practitioners and Appointments.—Dr. JOYCE's resolution:

That this meeting is of opinion that it should be considered disgraceful conduct in a professional sense for any registered practitioner to supplant another who has been compelled to vacate any appointment on the ground that it is inadequately paid for, such inadequate remuneration having been found by the General Medical Council to have been well founded,

was carried unanimously.

Letters of Warning to Head Masters of Schools.—Dr. PARR-DUDLEY moved that:

The letter of warning issued by the Manchester Division to the head masters of schools in their Division with reference to the medical practice shall be issued by this Division to the head masters of schools in Kent.

It was resolved that this motion be postponed to the next meeting on June 17th.

YORKSHIRE BRANCH:

HALIFAX DIVISION.

The annual meeting of this Division was held on May 4th. Dr. ELLIS was in the chair, and fifteen other members were present.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Annual Report.—The annual report was then read. This was adopted on the proposition of Dr. DRURY, seconded by Dr. PRIESTLEY LEECH.

Election of Officers.—The following officers were elected: *Chairman*, Dr. James Marshall; *Vice-Chairman*, Dr. George Hoyle; *Representative to Representative Meetings and Member of Branch Council*, Dr. Arthur Drury; *Committee*, Drs. Ellis, Hughes, Priestley Leech, and Macaulay; *Honorary Secretary and Treasurer*, Dr. J. F. Hodgson.

Whole-time Medical Officers of Health.—The memorandum on this subject was considered. The opinion was that a whole-time medical officer of health should have a salary of at least £500 per annum, but it was feared that if small districts were compelled to engage whole-time officers, then the salaries offered would be considerably below £500 per annum, and would only attract an inferior order of practitioners. It was resolved on the proposition of Dr. PRIESTLEY LEECH, seconded by Dr. MARSHALL:

That in districts of 50,000 inhabitants and upwards the medical officer of health should be debarred from private practice.

Medical Certification of Suitability of Patients for Hospital Treatment.—The recommendation of the Council was approved:

That a medical certificate of suitability for hospital treatment be required as a condition of hospital treatment, except in case of casualties.

This was proposed by Dr. LEECH and seconded by Dr. WHITAKER.

Contributions to Hospitals by Employers and Employees.—The report on this subject was considered, and it was resolved on the proposition of Dr. MACAULAY, seconded by Dr. MARSHALL:

That such contributions ought to be looked upon as subscriptions to a charity, and not in any sense as the payment of premiums.

Fresh Public Medical Institutions.—The statement submitted was approved.

Sanatoriums for Tuberculous Workers.—The subclauses of Clause 3 and the resolution in Clause 4 were approved.

Representation of Local Medical Profession on Hospital Boards.—This subject was considered. At the local infirmary all the members of the consulting and honorary staff are on the board of management. Dr. MARSHALL proposed and Dr. HUGHES seconded the following resolution, which was carried:

This meeting approves of the principle of the local medical profession (whether members of the staff or not) being represented on the board of management of local hospitals.

Medical Inspection of School Children.—At a meeting of the Division held on February 19th, a resolution, approving of the employment of part-time men as medical inspectors of school children, was passed and a copy sent to the Education Committee of the County Borough of Halifax. The Education Committee made certain proposals which were to be submitted to the Town Council on January 6th. A meeting of the Executive Committee of the Division was held, and as the proposals were of such importance to the medical profession in the Borough the Town Council was asked to receive a deputation in order that the Division might lay before them its views and recommendations. As a result the whole matter was referred back to the Education Committee by the Town Council. The Education Committee proposed to keep on their present medical officer (Dr. Hunt) as chief medical officer at his present salary of £150 a year, and to employ a whole-time assistant at £250 a year. The deputation from the Division met the Education Committee on February 15th. The deputation was asked for their views and recommendations. The strongest objection was taken to a general practitioner in the town being the chief executive officer. No discussion took place, and no questions were asked. The Committee promised to communicate its decision to the Secretaries of the Division. Their decision was printed in the local press on February 11th, and their resolutions were passed without opposition at the Town Council meeting on March 3rd. On March 9th a belated letter was received from the Secretary of the Education Committee informing the Division of the decision of the Education Committee, whose resolution was as follows:

That the medical officer of health be appointed Superintendent of the Medical Inspection of School Children, also that the services of Dr. Hunt be retained at his present salary, and a full-time Assistant Schools Medical Officer be appointed at a salary of £250 per annum, who shall be required to sign an agreement not to practise within five miles of the Halifax Town Hall for a period of three years after leaving the service of the Committee.

Dr. ELLIS gave an account of the reception of the deputation.

Treatment of School Children.—The Division expressed its disapproval of the free and promiscuous distribution of certain medicaments by the sanitary authorities.

Local Matters.—Certain other local matters were referred to, and a vote of thanks to the retiring Chairman, Dr. Ellis, was passed.

To ensure the insertion of notices in this column, they must be received at the Central Offices of the Association not later than the first post on Tuesday.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

ABERDEEN BRANCH.—*Election of Representative of the Branch on the Council of the Association.*—Nominations of candidates must be sent in writing on or before May 22nd to Dr. J. F. Christie, 7, Alford Place, Aberdeen.

BATH AND BRISTOL BRANCH; TROWBRIDGE DIVISION.—The annual meeting of this Division will be held at the Town Hall, Trowbridge, on Saturday, May 29th, at 3 p.m. Agenda: (1) To elect officers. (2) To receive financial statement. (3) To consider matters referred to Divisions: (a) Report on medical certification of suitability of patients for hospital treatment (see SUPPLEMENT to BRITISH MEDICAL JOURNAL, February 27th). (b) Report on contributions to hospitals by employers of labour and employees (see SUPPLEMENT to BRITISH MEDICAL JOURNAL, February 27th). (c) Statement as to fresh public medical institutions.—The Council, acting upon an instruction from the Annual Representative Meeting at Sheffield, refers the following motion for the consideration of the Divisions: "That it is desirable that no fresh public medical institution should be opened without previous consultation with the local medical profession through some organized body, such as the Division of the British Medical Association in the area of which it is proposed to establish such new institution, and that it be an instruction to the Council to give effect to this principle in considering applications from Divisions or Branches for support in dealing with hospital questions." The Council will be glad to receive from the Divisions their expressions of opinion on the subject. (d) Statement as to sanatoriums for workers suffering from tuberculosis. (4) To consider question of examination of recruits for the Territorial Forces. (5) To consider report on current work of Association.—JAMES PEARSE, M.D., Honorary Secretary.

BIRMINGHAM BRANCH; COVENTRY DIVISION.—The annual meeting of this Division will be held at the Coventry and Warwickshire Hospital on Tuesday, May 25th, at 8 p.m. Agenda: (1) To elect officers and Executive Committee for the year. (These include Chairman, Vice-Chairman, Secretary, Representative on the Branch Council, and on the Committees of Management of the Public Medical Service, and the New Dispensary Service.) (2) To receive the Report of the Executive Committee. (3) Matters referred to the Divisions: The representation of the local medical profession on Boards of Hospitals and similar bodies (SUPPLEMENT to the BRITISH MEDICAL JOURNAL, April 10th). (4) Recommendation from the Committee that the Division sanction the altering custom of Division, so that the Chairman's address should be delivered at a meeting other than the October meeting, when the dinner is held. (5) To thank the Committee of the Coventry and Warwickshire Hospital for the continued use of their Board Room for the meetings of this Division.—JOHN ORTON, Honorary Secretary, Coventry.

BIRMINGHAM BRANCH; COVENTRY AND TAMWORTH AND NUNEATON DIVISIONS.—A combined meeting of the Tamworth and Nuneaton Division with the Coventry Division will be held at the Coventry and Warwickshire Hospital on Tuesday, May 25th, at 8 p.m., for the purpose of electing a Joint Representative to represent them at the Annual Representative Meeting, and to instruct him in regard to matters arising at that meeting.—JNO. ORTON, Secretary of the Constituency.

BORDER COUNTIES AND NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCHES.—*Election of Representative Member on Central Council.*—Nominations, in accordance with the regulations of the Association, must be sent to me in writing on or before May 31st.—A. S. BARLING, Queen Square, Lancaster.

BORDER COUNTIES BRANCH; SCOTTISH DIVISION.—The annual general meeting of this Division will be held on Friday, June 4th, at the Dumfries and Galloway Royal Infirmary, Dumfries, at 3 p.m.—GEORGE R. LIVINGSTON, Honorary Secretary.

DUNDEE, PERTH, AND STIRLING BRANCHES.—*Election of Representative Member of Central Council.*—Nominations, in

accordance with the regulations of the Association, must be sent to me on or before Saturday, May 22nd.—R. C. BUIST, M.D., 166, Nethergate, Dundee, Returning Officer.

EAST ANGLIAN BRANCH.—Nominations for the election of Representative Members of Central Council must be forwarded to me not later than June 1st next.—B. H. NICHOLSON, East Lodge, Colchester, Honorary Secretary.

EAST ANGLIAN BRANCH.—The annual meeting of the Branch will be held at the Grand Hotel, Clacton-on-Sea, on Thursday, July 1st.—B. H. NICHOLSON, East Lodge, Colchester, Honorary Secretary.

EDINBURGH AND FIFE BRANCHES.—The attention of members of these two Branches is drawn to the fact that nominations for the election of two members upon the Central Council of the Association should be sent in to one of the Secretaries not later than June 16th.—A. LOGAN TURNER, 27, Walker Street, Edinburgh; FRANCIS D. BOYD, 22, Manor Place, Edinburgh; BALFOUR GRAHAM, Leven, Fife.

EAST YORK AND NORTH LINCOLN BRANCH.—The annual meeting of this Branch will be held at the Grimsby Hospital on Saturday, June 19th. Further particulars as to the time of meeting and business to be transacted will be published later in the JOURNAL and communicated by circular to each member. Nominations for the offices of (1) President-elect, (2) Vice-President, (3) Honorary Secretary and Honorary Treasurer must be in the hands of the Honorary Secretary before May 29th, in writing and signed by any three members of the Branch.—EDWARD TURTON, M.D., Honorary Secretary, 1, Albion Street, Hull.

EAST YORK AND NORTH LINCOLN AND CAMBRIDGE AND HUNTINGDON BRANCHES.—*Election of the Joint Representative on the Central Council of the Association.*—Nominations of candidates must be sent in writing, on or before May 29th next, to EDWARD TURTON, Branch Secretary, 1, Albion Street, Hull.

GLASGOW AND WEST OF SCOTLAND BRANCH.—*Election of Members of the Central Council.*—In accordance with Association By-law 25, Branch Rule 5, nominations for Representatives on the Central Council, each signed by at least three electors, are requested to be sent to me on or before Wednesday, May 26th. The Branch is entitled to return two Representatives. The present Representatives, Mr. James Grant Andrew and Dr. D. J. Mackintosh, M.V.O., are eligible and seek re-election.—Wm. D. MACFARLANE, Jun., 17, Woodside Crescent, Honorary Secretary.

GLASGOW AND WEST OF SCOTLAND BRANCH; GLASGOW NORTH-WESTERN DIVISION.—The annual meeting of this Division will be held in the Burgh Hall, Hillhead, on Wednesday, May 26th, at 8.30 p.m. Business: (1) Minutes of last meeting. (2) Report by the Secretary about the remit on "Fresh Medical Charities." (3) Annual report. (4) Election of office-bearers. (5) Election of Representative to the Representative Meeting. (6) Matter referred to Divisions for consideration and instruction to Representative: Representation of local medical profession on hospital boards and similar bodies (see SUPPLEMENT for April 10th). (7) Communication from Chelsea and Fulham Division. (8) Notice of motion by Dr. G. B. Buchanan: "That it be remitted to the Chairman and Secretary to make inquiries as to the steps necessary to alter the rules so that a Representative may be appointed at an earlier date than at present."—G. BURNSIDE BUCHANAN, Honorary Secretary.

LANCASHIRE AND CHESHIRE BRANCH.—The annual meeting of the Branch will be held at Chester on Wednesday, June 16th. Members desiring to make scientific, clinical, or other communications will please communicate at once with the Branch Secretary, F. CHARLES LARKIN, 54, Rodney Street, Liverpool.

LANCASHIRE AND CHESHIRE BRANCH; ALTRINCHAM DIVISION.—*Preliminary notice.*—The annual business meeting will be held on June 16th and a scientific meeting on June 24th. Particulars later. Members are requested to note the dates. Nominations of officers and committee to be made in writing to me before June 7th.—T. W. H. GARSTANG, Honorary Secretary.

LANCASHIRE AND CHESHIRE BRANCH; BURY DIVISION.—The annual meeting of this Division will be held on Tuesday, May 25th, in the Dispensary, Knowsley Street, Bury, at 8.45 p.m. Agenda: (1) Minutes. (2) Annual report. (3) Election of office-bearers. (4) Adoption of ethical rules. (5) Address by Dr. Arthur Helms on Displacements of the Uterus.—J. CAMERON TURNBULL, M.D., Honorary Secretary.

LANCASHIRE AND CHESHIRE BRANCH; ST. HELENS AND WARRINGTON DIVISIONS.—A joint meeting of these Divisions will be held in Lime Street Station Hotel, Liverpool, on Tuesday, May 25th, at 4.15 p.m. Business: To elect a Representative; Business of Representative Meeting.—JOHN J. BUCHAN and T. A. MURRAY, Honorary Joint Secretaries.

METROPOLITAN COUNTIES BRANCH.—Nominations of Branch Officers.—Pursuant to By-law 25, notice is hereby given that nominations for all the officers of the Branch—namely, President-elect, Vice-Presidents, Secretary, members of the Branch on the Central Council of the Association—must be sent in to the Honorary Secretary of the Branch on or before May 25th. Voting papers will be sent out on or before June 5th, and must be returned to the Secretary on or before June 12th.—**ATWOOD THORNE, E. W. GOODALL, Honorary Secretaries.**

METROPOLITAN COUNTIES BRANCH: MAYLEBONE DIVISION.—The annual meeting of this Division will be held at the Rooms of the Medical Society of London, Chandos Street, W., on Wednesday, May 26th, at 5 o'clock p.m. Agenda: (1) Minutes. (2) Letters. (3) Election of officers; the following have been nominated by the Executive Committee as officers for the ensuing year: *Chairman*, Dr. F. J. Smith; *Vice-Chairman*, Mr. L. E. Cressy; *Honorary Treasurer*, Dr. Comyns Berkeley; *Honorary Secretary*, Mr. Donald Armour; *Representatives of the Division on the Branch Council*, Sir Victor Horsley, Dr. Lauriston Shaw, Dr. G. A. Heron, Dr. W. E. Burton, Mrs. Berry, M.D., and the Honorary Secretary; *Representative in Representative Meetings*, Mr. Donald Armour. (4) Nomination for election to the Central Council; the Executive Committee recommends the nomination of Sir Victor Horsley and Dr. Lauriston Shaw. (5) To receive the annual report of the Executive Committee. (6) Report of the Executive Committee upon the proposed alterations in the rules of the Division. (7) Central Ethical Committee's report to the Council on a communication from the Metropolitan Counties Branch. Findings as to acceptance of appointments in disregard of "Warning Notice." (8) Public Health Committee's memorandum on whole-time medical officers of health. (9) SUPPLEMENT, BRITISH MEDICAL JOURNAL, January 23rd. (10) Federated Societies' Medical Benefit Association (BRITISH MEDICAL JOURNAL, February 13th, p. 425). (11) Departmental Committee re Midwives Act; action taken by the Association; the giving of evidence by Divisions before the Committee, and suggestions from Divisions as to any points upon which evidence should be given. (12) Any other business.—**DONALD ARMOUR, Honorary Secretary.**

METROPOLITAN COUNTIES BRANCH: WESTMINSTER DIVISION.—The annual meeting of this Division will be held at the Criterion Restaurant on Thursday, June 3rd, when Sir Lauder Brunton will read a paper on Blood Pressure in Man; its Estimation and Indications for Treatment, and the officers of the Division for the ensuing year will be elected.—**HARVEY HILLIARD, Honorary Secretary.**

MIDLAND BRANCH.—The annual meeting of this Branch will be held at the Leicester Infirmary on Thursday, June 10th. (1) The President-elect, Dr. R. Pratt, will give an address. (2) Election of Branch officers. (3) Annual report of the Branch. (4) Any other business. In accordance with the By-laws, notice is hereby given that nominations for the election of two Representatives of this Branch on the Central Council must be sent to the Honorary Secretary of the Branch not later than May 24th.—**ROBERT SEVESTRE, Honorary Secretary, London Road, Leicester.**

MIDLAND BRANCH: LEICESTER AND RUTLAND DIVISION.—The annual meeting of the Division will be held on Wednesday, May 26th, at the Leicester Infirmary, at 4.15 p.m. Agenda: Minutes of previous meeting; election of Representatives of the Division on the Branch Council, and of officers and members of the Executive Committee of the Division; election of Representatives of the Division at Representative Meetings; annual report of the Executive Committee; any other business.—**WILFRED E. GIBBONS, Honorary Secretary, Leicester.**

NORTH OF ENGLAND BRANCH.—Nominations for the election of members of the Central Council must be sent in to me on or before May 31st.—**DAVID F. TODD, Honorary Secretary, Beech House, Sunderland.**

NORTH WALES BRANCH.—Nominations for the election of a Representative on the Central Council and for other officers of the Branch for the next year, in accordance with By-law 25, must be sent to the Honorary Secretary on or before June 1st.—**H. JONES ROBERTS, Honorary Secretary, Llywenarth, Pen-y-groes.**

NORTH WALES BRANCH: SOUTH CARNARVON AND MERIONETH DIVISION.—The annual meeting of this Division will be held at the Tower Hotel, Pwllheli, on Thursday, May 27th, at 2 p.m.—**H. GLADSTONE JONES, Honorary Secretary, Plas Gwilym, Cricieth.**

NORTHERN COUNTIES OF SCOTLAND BRANCH.—Election of Representative of the Branch on the Central Council of the Association.—Nominations of candidates for election to the Central Council must be forwarded to the Honorary Secretary on or before May 29th.—**J. MUNRO MOIR, M.D., 4, Ardross Terrace, Inverness, Honorary Secretary.**

NORTHERN COUNTIES OF SCOTLAND BRANCH.—The annual meeting of the Branch will be held at Elgin on Saturday, June 5th. Further particulars as to hour and place of meeting will be communicated to each member by circular.—**J. MUNRO MOIR, M.D., Honorary Secretary, 4, Ardross Terrace, Inverness.**

SOUTH-EASTERN BRANCH.—The annual meeting of this Branch will be held at Croydon on Wednesday, June 23rd, Dr. J. J. Macan, President-elect, in the chair. The following will be the agenda:—(1) To elect the officers of the Branch; nominations by three members for the offices of President-elect, Vice-President, and Secretary, may be sent to the Honorary Secretary on or before May 21st. (2) To receive the annual report of the Branch. (3) To transact any business that may be transacted by an ordinary meeting. Three members to represent the Branch on the Central Council will also be elected by voting papers. Nominations for these posts, each by three members in meeting, should be sent to the Honorary Secretary on or before May 21st.—**H. M. STEWART, Honorary Secretary, Dulwich.**

SOUTH-EASTERN BRANCH: FOLKESTONE DIVISION.—The annual meeting of this Division will be held at Hotel Wagon, Folkestone, on Saturday, May 29th, at 8.45 p.m. Agenda: (1) Minutes. (2) Election of Representative of Division on Branch Council, officers of Executive Committee, Representative at Representative Meeting, President, and Secretary. (2) Annual report of the Executive Committee. (3) Any other business.—**P. VERNON DODD, M.D., Honorary Secretary.**

SOUTH-EASTERN BRANCH: GUILDFORD DIVISION.—The annual meeting of the Division will be held at the Royal Surrey County Hospital on Wednesday, May 26th, at 4.30 p.m. Agenda: (1) Minutes. (2) Election of officers and members of the Executive Committee for the ensuing year. (3) Annual report of the Division. (4) To consider the following proposal of the Brighton Division: "That the South-Eastern Branch be divided into two smaller Branches, one to consist of that part of Kent which is already in the South-Eastern Branch, and the other of the county of Sussex and so much of the county of Surrey as is already part of the Branch." (5) Matters referred to Divisions: (a) Medical inspection and treatment of school children. (b) Whole-time appointments for medical officers of health. (c) Reports from Hospitals and Medico-Political Committees. (see SUPPLEMENT to BRITISH MEDICAL JOURNAL, February 27th). (d) Representation of local medical profession on boards of hospitals and similar bodies (see SUPPLEMENT to BRITISH MEDICAL JOURNAL, April 10th). (6) Dr. B. H. Kingsford will read notes of a case of intestinal obstruction due to an impacted gall stone, and will exhibit specimen. (7) Mr. E. J. Smyth will introduce a discussion on Ophthalmia Neonatorum, with especial reference to the Report of the Committee of the Association on the subject, referred to the Divisions for their consideration (see SUPPLEMENT to BRITISH MEDICAL JOURNAL, May 8th). (8) Any other business. Tea will be provided at 4.15 p.m. All members of the South-Eastern Branch are entitled to attend and to introduce professional friends. The Honorary Secretary will be glad to receive nominations for any of the above offices, and to hear from any other members willing to show cases or specimens.—**E. J. SMYTH, Honorary Secretary and Treasurer, Maythorne, Epsom Road, Guildford.**

SOUTH-EASTERN BRANCH: MAIDSTONE DIVISION.—The next meeting of this Division will take place on Thursday, June 17th, for the purpose of electing officers for the ensuing year. It has been proposed to have a dinner afterwards. The Honorary Secretary would feel greatly obliged if each member would kindly intimate his intention of being present or not as early as possible.—**GEORGE POTTS, Honorary Secretary.**

SOUTH-EASTERN OF IRELAND BRANCH.—A meeting of this Branch, as also a meeting of the Branch Council and the local Division, will be held at Council Chamber, Clonmel, on Wednesday, June 2nd, at 12.0 noon. Agenda: (1) Minutes of last meeting. (2) Letters of apology. (3) Correspondence. (4) Dr. D. Walshe will move: "That in any legislation that may follow the reports of the Local and Veterinary Commissions to inquire into the working of the Poor Laws, the British Medical Association be requested to use all its influence to safeguard the interests of the Irish dispensary medical officers and medical officers to workhouses, and to secure: (a) That entrance to the Irish Poor Law medical service shall be by competitive examination; (b) that adequate salaries shall be fixed, and (c) superannuation allowances be made compulsory on the lines of civil service superannuation regulations." (5) Dr. Laffan will move at next meeting: "That members be requested to contribute 2s. 6d. each annually towards a dinner fund, whether they attend or not, the proceeds to be allocated proportionately to each Division centre (wines and tobacco not included), and any deficit to be supplied by those actually present at dinner." (6) Any other business.—**J. QUIRKE, Honorary Secretary, Piltown.**

SOUTH MIDLAND BRANCH.—In accordance with By-law 25, notice is hereby given that nominations for the election of a Representative of this Branch on the Central Council must be sent to me not later than May 22nd next.—**E. HARRIES-JONES, 16, Castilian Street, Northampton.**

SOUTH WALES AND MONMOUTHSHIRE BRANCH.—Election of Two Representatives on the Central Council of the Association.—In accordance with By-law 25 of the Association, nomination of candidates must be sent to me in writing on or before Saturday, May 22nd next.—**ALFRED HANSON, Swansea, Honorary Secretary, South Wales and Monmouthshire Branch.**

SOUTH-WESTERN BRANCH.—Election to Central Council.—This Branch is entitled to return two members. Nominations should be sent to the undersigned so as to reach him not later than May 24th.—**RUSSELL COOMBE, Branch Secretary, 5, Barnfield Crescent, Exeter.**

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH.—The annual meeting of this Branch will be held at Malvern on Thursday, June 10th. To elect Branch officers and appoint members to the Central Council of the Association; to receive annual report of the Branch, and for any other business. Dinner.—**C. S. MORRISON, Honorary Secretary.**

ULSTER BRANCH.—Nominations for the offices of President, Treasurer, and Secretary, each signed by two members, should be sent not later than June 2nd to **CECIL SHAW, M.D., Honorary Secretary, 29, University Square, Belfast.**

ULSTER AND CONNAUGHT BRANCHES.—Two members to represent the combined Branches on the Central Council will be elected next month. Nominations, signed by three members, should be sent to me not later than June 2nd.—**CECIL SHAW, M.D., Honorary Secretary Ulster Branch, 29, University Square, Belfast.**

YORKSHIRE BRANCH.—The annual meeting of the Branch will be held at the Grand Hotel, Scarborough, on Saturday, June 26th.—**ADOLPH BRONNER, Honorary Secretary, 33, Manor Row, Bradford.**

YORKSHIRE BRANCH.—Nominations for the election of Representative members of the Central Council (two), each signed by at least three members, must be forwarded to me not later than June 15th. The present Representatives are Drs. Goyder and Sinclair White.—**ADOLPH BRONNER, Honorary Secretary, 33, Manor Row, Bradford.**

INDIAN MEDICAL SERVICE.

MEASURES FOR PROMOTING THE GROWTH OF AN INDEPENDENT MEDICAL PROFESSION IN INDIA.

The following correspondence, which has passed between the Secretary of State and the Government of India, was presented to Parliament on May 20th:

No. 1.

Dispatch from the Secretary of State for India to the Governor-General of India in Council, No. 137, dated 9th August, 1907.
(Extract.)

I desire to invite the attention of Your Excellency's Government to Lord George Hamilton's Dispatches, Military, No. 5, 18th January, 1900, and Public, No. 157, 13th December, 1900. In the closing paragraph of the last Dispatch my Predecessor observed: "It would be of such great benefit to India generally that medical men should establish themselves in private practice in the country in the same way as they do in other parts of Her Majesty's Empire without entering the medical service connected with the Army, that I am unwilling to accept proposals based upon the assumption that sufficient medical qualifications will never be found in India or elsewhere outside the Indian Medical Service." I am not aware that this part of my Predecessor's Dispatch has ever formed the subject of a communication from the Government of India, but I am confident that the policy indicated in it will generally have the hearty support of Your Excellency as it has mine. I shall be glad to be informed whether any steps have yet been taken to give effect to that policy, and whether any further measures are in contemplation for promoting the growth of an independent medical profession in India.

No. 2.

Letter from the Government of India in the Home Department to the Right Honourable the Secretary of State for India, No. 20, dated 20th August, 1908.
(Extract.)

We have the honour to refer to Your Lordship's Dispatch No. 137 (Military), dated the 9th August, 1907, regarding the measures which have been taken or are in contemplation for promoting the growth of an independent medical profession in India. We desire, in the first place, to explain why we have not replied at an earlier date. Last year we addressed local Governments on the subject of creating appointments of medical officers of health in

both urban and rural areas, and we suggested that these posts should, whenever possible, be filled by Indian medical men outside the Indian Medical Service. We felt that the reception given to this proposal would assist us in replying to the dispatch, but as only one local Government has as yet favoured us with its opinion, and as we learn that Your Lordship desires an early expression of our views, we proceed to state the general conclusions at which we have arrived. We are in entire sympathy with the desire to promote the growth of an independent medical profession in India, and we recognize the important bearing upon this question of Lord George Hamilton's suggestion that advantage should be taken of the creation of new medical appointments to provide for the admission of independent practitioners either to the new appointments or to some of the posts which are regarded as reserved for members of the Indian Medical Service. One essential restriction, however, upon any reduction of the numbers of that service is that its strength must always be sufficient to meet the medical requirements of the Indian Army. In order that it may do this effectually it is necessary that it should include a large reserve of officers whose services would be available on the outbreak of war; and, as a measure of economy, these reserve officers must in peace time be employed on civil duties. It appears, however, from inquiries we have made, that about one-third of the officers holding these civil posts could not be spared for military duty even in the event of an emergency so grave as to require a general mobilization of the army in India. To the extent of about one-third, therefore, the officers in civil employ do not form any part of the real war reserve, and there would be no military objections to the transfer to independent practitioners of the civil appointments held by them. We have accordingly to consider whether there are objections on other grounds to such a transfer. The posts referred to include certain administrative offices which must continue to be held by senior members of the Indian Medical Service. They also include some of the more important of the civil surgencies, superintendships of lunatic asylums, appointments in the Assay department, the Chemical Analyser's department and the Bacteriological department, and about half the professorial appointments in the various medical colleges. With regard to the last-mentioned appointments it has been urged that any large reduction in the number of such posts reserved for members of the Indian Medical Service would seriously diminish the attractiveness of that service and produce a deterioration in the quality of the candidates. We admit that this argument would have considerable force if it were contemplated to deprive the Indian Medical Service of the full number of these appointments at one stroke, but there is no possibility of qualified candidates being forthcoming at present for more than a very small proportion of them, and we do not anticipate that the exclusion of these few posts will have any appreciable effect upon recruitment. By the time that a larger number of qualified candidates is forthcoming it is probable that the number of medical schools and professorial chairs will also have increased, and there will, therefore, be no difficulty in retaining for the Indian Medical Service a proportion of prize appointments sufficient to maintain its attractiveness. The attainment of the object which Your Lordship and ourselves alike have in view depends, then, upon the possibility of finding in this country medical practitioners qualified to hold the appointments which could be thrown open to them. There would undoubtedly be no difficulty in securing the services of private practitioners who are qualified to fill the less important civil surgencies, but unfortunately these are just the appointments in which the war-reserve officers of the Indian Medical Service can most suitably be employed, and the transfer of these surgencies from that service might, therefore, cause some embarrassment and lead to increased expenditure. For the more important appointments of civil surgeon, the bacteriological and other special posts, and the professorial chairs, very few qualified candidates could at present be found. It is in our opinion of the highest importance and essential to the growth of a really efficient independent medical profession that the present high character of the instruction given in the medical colleges in India should be maintained unimpaired. Any diminution of efficiency in that direction would go far to defeat the object in view, and would most certainly retard the more general employment of independent practitioners. Subject, however, to this essential condition of efficiency, we are quite willing to appoint such practitioners to professorial posts whenever fully qualified candidates are forthcoming. And we shall also be prepared to appoint qualified medical gentlemen outside the ranks of the

Indian Medical Service to other posts which are not required for the employment of the war-reserve of medical officers. We desire to impress upon Your Lordship the excellent work which has been and is being done by the medical schools in India. The majority of the students who pass through those schools do already take to private practice, and in this way an independent medical profession is gradually being created. The general average of attainments of these men is not, it is true, equal to that of the officers of the Indian Medical Service, but each generation of students is better than its predecessor, and provided nothing is done to lower in any way the standard of instruction given in the medical colleges, there is every reason to hope that this progressive improvement will be maintained. Your Lordship will observe that in the preceding paragraphs we have considered the question only with reference to the general medical profession in India. We have done so because we consider that it is an essential condition of the introduction of any scheme for the gradual opening of civil medical appointments now reserved for the Indian Medical Service to the general medical profession that qualified candidates should be available among the natives of this country or the domiciled community. The appointment of English medical men recruited in England would lead to serious practical difficulties, as these gentlemen would require leave to England in the same way as members of the Indian Medical Service, and, if we did not form a leave reserve of men similarly recruited, we should find ourselves in an embarrassing position when they were granted leave. Further, to recruit medical practitioners in England and form a leave reserve would in effect be to create a second medical service, which would doubtless put forward claims to be treated in precisely the same way as the Indian Medical Service, and which would do nothing to promote the growth of an independent medical profession in this country. If European medical officers are required for any particular appointment or class of appointments they can, in our opinion, most advantageously be supplied by the Indian Medical Service. We desire to remark incidentally that we anticipate that difficulties may arise from the appointment of independent medical practitioners to particular posts, such as civil surgeoncies. Owing to the multiplicity of gratuitous services which are demanded of civil surgeons, it is quite possible that, if private practitioners are appointed, patients entitled to such services may not infrequently complain of neglect. At present it is comparatively easy to deal with such complaints, but when the civil surgeon is not a member of a particular service, and so liable to transfer, but an independent practitioner permanently resident in the station, it will be difficult, if the complaints prove to be well-founded, to provide any adequate remedy short of his removal from office, and his replacement either by another independent practitioner, if one is available, or by an officer of the Indian Medical Service. These difficulties, however, are not, we believe, insuperable, and they will tend to diminish with the increase in the number of practitioners who are qualified to hold such appointments and anxious to obtain them. In conclusion, we desire to repeat the considerations which, in our opinion, must govern any advance in the direction indicated in Your Lordship's dispatch, viz., that the advance should be very gradual and tentative and in the main, though not exclusively, from the bottom, (2) that it should be made only as really qualified candidates become available in India, (3) that nothing should be done to lower the efficiency of the medical schools and their hospitals, (4) that a sufficient number of civil appointments be reserved to provide for the economical employment of the war-reserve of the Indian Medical Service, and (5) that, in determining what these appointments should be, the necessity of maintaining the attractiveness of the Indian Medical Service should be borne in mind. When Your Lordship has placed us in possession of your views upon our proposals we shall address local Governments upon the whole subject, and in due course communicate to you the result of our further consideration of the points discussed with them.

No. 3.

Dispatch from the Secretary of State for India to the Governor-General of India in Council, No. 225, dated 11th December, 1908.

MY LORD,

In connection with Your Excellency's dispatch in the Home Department, No. 20, dated 20th August, 1908, I have given consideration in Council to the question whether further steps can be taken to promote the growth of an independent medical profession in India by throwing open to the profession in general some of the various civil

appointments now held by officers of the Indian Medical Service and other similar appointments which may be created in future.

2. I observe with satisfaction that your Government are in accord with the object I have in view. As regards the means to be adopted for attaining that object, I concur generally in the principles laid down at the end of your dispatch, and shall be glad to learn, after you have received and considered the opinions of the Local Governments, what measures you can propose in order to give effect to them.

3. Since 1899 successive Secretaries of State have drawn attention to the objections to indefinite extension of the cadre of the Indian Medical Service for the purpose of providing for miscellaneous appointments for which that Service, though it may offer well-qualified candidates, is not the only, and may not be the most economical, source of supply. Notwithstanding the necessity for restriction, the cadre of the Indian Medical Service has in recent years continued to increase, and, apart from other objections, its further increase will be likely to cause serious difficulties in the matter of recruiting. I have consequently decided that the time has now arrived when no further increase of the civil side of the service can be allowed, and when a strong effort should be made to reduce it by gradually extending the employment of civil medical practitioners recruited in India.

4. Your Excellency's Government will consider what appointments can best be filled in this way. If there should be any particular posts requiring special qualifications, for which suitable persons, whether trained in Indian colleges or holding European medical degrees, be they European, Eurasian, or Indian, cannot be obtained in India, it will be necessary to seek candidates from this country.

5. When it is found impossible to obtain a man from outside the Indian Medical Service to fill a particular new civil appointment, or one which has not previously been so filled, I will not object for the present to that Service being drawn upon; but the vacancy so caused must be filled from outside it, i.e., no appointment must be made in succession which would involve an addition to the cadre of the Indian Medical Service.

I have, &c.,
(Signed) MORLEY OF BLACKBURN.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

THE following appointments have been made at the Admiralty: Staff Surgeon A. C. BEAN to the *Zembroke*, additional, for disposal, May 12th; Staff Surgeon J. MARTIN to the *Magnificent*, May 17th; Staff Surgeon H. L. GEORGEHAN, M.D., to the Royal Marine Infirmary, Deal, undated.

ARMY MEDICAL SERVICE.

RETIRED ARMY MEDICAL CORPS.
LIEUTENANT-COLONEL J. CARMICHAEL is placed on retired pay, May 5th. His commissions are dated: Surgeon, July 30th, 1881; Surgeon-Major, July 30th, 1893; Lieutenant-Colonel, July 30th, 1901.

INDIAN MEDICAL SERVICE.

COLONEL D. WILKIE, M.B., Bengal, has retired from the service, from April 2nd. He was appointed Assistant Surgeon, April 1st, 1873, and became Colonel, April 2nd, 1904.

The *Gazette of India* of April 24th announces that Surgeon-General Sir G. BOXFORD, M.D., F.R.C.S.E., Bengal, Director-General, Indian Medical Service, is granted privilege leave for one month and twenty-two days, with leave on private affairs for six months and eight days in continuation, from May 1st. Lieutenant-Colonel C. P. LUKIS, M.D., Bengal, is appointed to officiate as Director-General, Indian Medical Service.

TERRITORIAL FORCE.

ROYAL FIELD ARTILLERY.

Second Northumbrian Brigade.—Surgeon-Lieutenant-Colonel T. MCC. FOLEY has been granted the honorary rank of Surgeon-Colonel, March 31st, 1908.

INFANTRY.

Sixth Battalion, the Prince of Wales's (North Staffordshire Regiment).—Surgeon-Lieutenant-Colonel J. FAUSSET, M.D., has been granted the honorary rank of Surgeon-Colonel, March 31st, 1908.

Fourth Battalion, the Welsh Regiment.—Surgeon-Major EVAN EVANS has been granted the honorary rank of Surgeon-Lieutenant-Colonel, March 31st, 1908.

Fourth Battalion, the King's Own (Royal Lancaster Regiment).—Surgeon-Captain R. J. MORRIS has been granted the honorary rank of Surgeon-Major, March 31st, 1908.

ROYAL ARMY MEDICAL CORPS.

Sanitary Service.—Lieutenant-Colonel J. A. JONES, M.D., has been granted the honorary rank of Surgeon-Colonel, March 31st, 1908. Lieutenant-Colonel J. T. HALLIDAY, M.B., and to a Majority

of Captain H. W. THOMSON, M.B., bears date April 1st, 1908, and not January 11th, 1909, as stated in the *London Gazette* of March 12th.

Second *London (City of London) Field Ambulance*.—FERCY C. P. INGRAM, to be Lieutenant, March 30th.

Attached to Units other than Medical Units.—Lieutenant-Colonel C. DOWNING, Majors F. V. ADAMS, E. W. BARNES, H. P. CHALLIS, ALFRED REYS, Lieutenant G. McKELLAR, M.D., to be Captain, April 1st, 1908.

For Attachment to Units other than Medical Units.—ROBERT BRUCE, M.B., to be Lieutenant, March 17th; ALFRED B. A. CARVER, to be Lieutenant, March 30th; FREDERICK DEVERE, to be Lieutenant, March 30th; DONALD S. SUTHERLAND, M.D., to be Lieutenant, March 30th.

TERRITORIAL DECORATION.

The King has been pleased to confer the Territorial Decoration upon the undermentioned officers of the Territorial Force, who have been duly recommended for the same under the terms of the Royal Warrant dated August 17th, 1908:

Royal Army Medical Corps.

Major F. J. TABB, London District; Colonel J. S. RIDDELL, M.V.O., M.B., Scottish Command; Lieutenant-Colonel N. E. ROBERTS, M.B., Sanitary Service, Western Command.

Royal Garrison Artillery.

Surgeon-Major R. G. NESBITT, Cornwall (Duke of Cornwall's).

Infantry.

Surgeon-Captain and Honorary Surgeon-Major R. J. MORRIS, 4th Battalion the King's Own (Royal Lancaster Regiment).

Vital Statistics.

THE REGISTRAR-GENERAL'S QUARTERLY RETURN.

THE Registrar-General has just issued his return relating to the births and deaths in the first quarter of the year, and to the marriages during the three months ending December last. The marriage-rate during that period was equal to 15.6 per 1,000 of the total population, and was 1.7 per 1,000 below the average rate for the fourth quarter in the ten preceding years.

Births registered in England and Wales during the three months under notice numbered 221,074, and were equal to an annual rate of 26.0 per 1,000 of the population, estimated at 35,756,615 persons in the middle of the year; the average birth-rate in the corresponding period of the ten preceding years was 28.4 per 1,000. Three of the largest counties last quarter ranged from 18.3 in Cornwallshire, 18.6 in Sussex, 19.8 in Northamptonshire, and 20.2 in Dorsetshire, to 30.0 in Staffordshire, 31.2 in Nottinghamshire, 35.5 in Durham, 35.4 in Glamorganshire, and 37.2 in Monmouthshire. In seventy-six of the largest towns, including London, the birth-rate averaged 26.7 per 1,000; in London the rate was 25.3, while among the seventy-five other towns it averaged 27.2, and ranged from 15.4 in Hastings, 14.6 in Hornsey, 15.5 in Bournemouth, 16.1 in Halifax, and 18.5 in Bradford, to 33.7 in St. Helens, 34.2 in Tynemouth, 34.3 in Newport, Mon., and in Swansea, 34.8 in Wigan, 36.0 in Merthyr Tydfil, and 41.5 in Rhondda.

The excess of births over deaths during the quarter was 68,417, against 96,976, or 267, and 94,052 in the first quarters of the three preceding years. The returns issued by the Board of Trade in 1908, that the passenger movement between the United Kingdom and places outside Europe resulted in a net balance outward of 48,598 persons. There was an outward balance of 21,294 English, 276 Welsh, 5,313 Scotch, and 899 Irish passengers; and an inward balance of 1,234 British Colonial passengers; among foreigners there was a net balance outward of 20,450.

During the first quarter of the year the deaths of 160,657 persons were registered, equal to an annual rate of 18.2 per 1,000, or 0.2 per 1,000 less than the mean rate in the corresponding quarter of the ten preceding years. The lowest county death-rates last quarter were 14.8 in Essex, 15.1 in Kent, 15.4 in Middlesex, 16.6 in Derbyshire, 16.8 in Northamptonshire, and 16.9 in the East Riding of Yorkshire; the highest rates were 19.1 in Hertfordshire and in Cambridgeshire, 19.2 in the North Riding of Yorkshire, 19.5 in Herefordshire, 20.1 in Lancashire, 20.2 in Warwickshire, and 20.8 in Shropshire. In seventy-six of the largest English towns, with an aggregate population of over sixteen millions, and a half millions, the corrected death-rate averaged 19.8 per 1,000; in 143 smaller towns, containing a population of over five millions, the rate was 17.9 per 1,000; while in the remainder of the country it was 17.0 per 1,000. The corrected death-rates in the seventy-six towns ranged from 10.2 in Hornsey, 11.1 in Walthamstow, 12.6 in East Ham, 12.7 in Handsworth (Staffs), 13.3 in Gateshead, and 13.4 in Barrow-in-Furness, to 22.1 in Oldham, 22.2 in Manchester, 23.1 in Bury, 23.2 in Liverpool, 24.2 in Wigan, and 25.9 in St. Helens; in London the rate of mortality was 16.4 per 1,000.

The 160,657 deaths from all causes in England and Wales last quarter included 11,179 which were referred to the principal infectious diseases; of these, 4,479 resulted from measles, 2,129 from whooping-cough, 1,771 from diphtheria, 833 from diarrhoea, 813 from scarlet fever, 646 from "fever" (principally enteric), and 8 from small-pox. The aggregate mortality from these diseases was equal to 1.26 per 1,000, or 0.06 per 1,000 below the average rate in the corresponding quarters of the ten preceding years. The mean death-rate from measles was the average, but from each of the other diseases it showed a decline.

The rate of infant mortality, measured by the proportion of deaths among children to registered births was equal to 122 per 1,000, or 15 per 1,000 less than the average rate in the corresponding quarter of the ten preceding years. Among the several counties the rates of infant mortality last quarter ranged from 95 in Kent, 96 in Surrey and in Buckinghamshire, 103 in Middlesex and 102 in Hertfordshire and in Essex, to 139 in Cumberland, 141 in Cambridgeshire, 146 in the North Riding of Yorkshire, 145 in Nottinghamshire and in Denbighshire and 163 in Carmarthenshire. In seventy-six of the largest towns the mean rate was 123 per 1,000; in London it was 112 per 1,000, while it averaged 107 in the seventy-five other large towns, ranging from 72 in Barrow-in-Furness, 74 in Handsworth (Staffs), 75 in Hornsey, 77 in Hastings and 80 in Wallasey, to 158 in Swansea, 160 in Blackburn, 163 in Burnley, 167 in Nottingham, 170 in St. Helens, and 181 in Wigan.

The mean death-rate among persons aged 15 and upwards was 8.8 per 1,000 of the population estimated to be living at these ages, and was 0.2 per

1,000 below the mean rate in the ten preceding first quarters. In the seventy-six large towns the death-rate in this group of ages was 9.6 per 1,000; in London the rate was 9.3, while among the other large towns it ranged from 4.8 in Hornsey, 5.0 in Walthamstow, 5.8 in Hastings, and 6.0 in East Ham, to 13.1 in Liverpool, 13.2 in Manchester, 13.4 in Warrington, 13.7 in Middlesbrough, 13.8 in Wigan, and 17.5 in St. Helens.

Among persons aged 60 years and upwards the death-rate last quarter was equal to 96.7 per 1,000 of the population at that age-period, against an average rate of 87.1 per 1,000. In the seventy-six towns the mean rate was 104.5 per 1,000, while among the other large towns it was 107.5, while it ranged from 75.7 in Hornsey, 76.0 in Grimsby, 76.2 in Gateshead, and 76.9 in Norwich, to 124.9 in Salford, 125.9 in Oldham, 131.2 in Northampton, 135.9 in Bury, and 145.3 in Rochdale.

The mean temperature of the air last quarter was below the average, the deficit amounting to as much as 2° in the southern parts of the country; the rainfall for the quarter was below the average in most districts; while the duration of bright sunshine was generally in excess.

HEALTH OF ENGLISH TOWNS.

IN seventy-six of the largest English towns, including London, 8,240 births and 4,322 deaths were registered during the week ending Saturday last, May 15th. The annual rate of mortality in these towns, which had been 15.8, 14.5, and 14.1 per 1,000 in the three preceding weeks, further fell last week to 13.7 per 1,000. The rates in the seventy towns ranged from 5.9 in Handsworth (Staffs), 7.2 in Bournemouth, 7.3 in East Ham, 8.0 in Northampton, and 8.2 in Hornsey, to 19.9 in Wolverhampton, 22.4 in Birkenhead, 22.9 in Oldham, 23.3 in Bootle, 23.1 in Coventry, and 24.7 in Wigan. In London the rate of mortality was 13.1 per 1,000, while it averaged 13.9 in the seventy-five other large towns. The death-rate from the principal infectious diseases averaged 1.2 per 1,000 in the seventy-six towns, and corresponded with the rate in London from the same diseases; among the other towns the death-rates from these diseases ranged from 2.7 in St. Helens, 2.8 in Tynemouth, 2.9 in Warrington, 3.2 in Salford, 4.5 in Bootle, 5.2 in Wigan, and 7.5 in Wolverhampton. Measles caused a death-rate of 1.1 in West Ham, 1.3 in King's Norton and in Coventry, 1.9 in Salford, 2.2 in Warrington, 3.0 in Bootle, 3.5 in Wigan, and 5.1 in Wolverhampton. The rate of 1.1 in Blackburn and 1.3 in Merthyr Tydfil, whooping-cough of 1.1 in Hornsey, 1.3 in Willesden and in Coventry, 1.5 in Middlesbrough, and 1.6 in St. Helens and in Swansea, "fever" of 2.3 in Hanley; and diarrhoea of 1.2 in Aston Manor and in Wigan. The mortality from diphtheria showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospital and the General Fever Hospital, which had been 219, 3,381, and 2,175 at the end of the three preceding weeks, had further fallen to 2,173 at the end of last week; 313 new cases were admitted during the week, against 265, 305, and 309 in the three preceding weeks.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, May 15th, 638 births and 410 deaths were registered in the twenty-two principal urban districts of Ireland, as against 724 births and 401 deaths in the preceding period. The annual death-rate in these districts, which had been 23.9, 20.6, and 18.3 per 1,000 in the three preceding weeks, rose to 28.7 per 1,000 in the week under notice, this figure being 5.0 per 1,000 higher than the mean annual death-rate in the seventy-six English towns for the corresponding period. The figures in Dublin and Belfast were 18.5 and 19.6 respectively; those of the other districts ranged from 4.3 in Ballinacorney and 5.2 in Portadown to 23.8 in Sligo and 39.8 in Lurgan, while Cork stood at 19.2, Londonderry at 15.7, Limerick at 13.7, and Waterford at 27.3. The zymotic death-rate in the twenty-two districts averaged 1.3 per 1,000, as against 1.0 per 1,000 in the preceding period.

ANNUAL MEETING, BRITISH MEDICAL ASSOCIATION, BELFAST, 1909.

THE Seventy-seventh Annual Meeting of the British Medical Association will be held at Belfast from July 23rd, to July 31st, 1909, under the Presidency of Sir William Whitla.

The Annual Representative Meeting commences in Belfast on July 23rd. The Presidential Address will be delivered on July 27th. The Sections will meet on July 28th, 29th, and 30th.

A preliminary programme of arrangements was published in the SUPPLEMENT of May 1st, p. 197. The Honorary Local Secretaries are: Henry Lawrence McKisack, M.D., M.R.C.P., 17, University Square, Belfast; Cecil Edward Shaw, M.A., M.D., M.Ch., 29, University Square, Belfast; and Howard Stevenson, B.A., M.B., F.R.C.S.I., 2, College Square North, Belfast.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

THE British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. Od., and the BRITISH MEDICAL JOURNAL is supplied weekly, post free, to every member of the British Medical Association, wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every

Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three Members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the BRITISH MEDICAL JOURNAL for non-members is £1 8s. Od. for the United Kingdom, and £1 15s. Od. for abroad.

SUPPLEMENT TO THE BRITISH MEDICAL JOURNAL.

SEVENTY-SEVENTH ANNUAL MEETING OF THE British Medical Association. AT BELFAST, JULY, 1909.

President-elect:

Sir WILLIAM WHITLA, M.D., LL.D., Professor of Materia Medica and Therapeutics, Queen's College, Belfast.

Past-President:

HENRY DAVY, Hon.D.Sc., M.D., F.R.C.P.Lond., Physician, Royal Devon and Exeter Hospital, Exeter.

Chairman of Representative Meetings:

JAMES ALEXANDER MACDONALD, M.D., M.Ch., R.U.I., Physician, Taunton and Somerset Hospital.

Chairman of Council:

EDMUND OWEN, Hon.D.Sc., LL.D., F.R.C.S., Consulting Surgeon to St. Mary's Hospital, London.

Treasurer:

EDWIN RAYNER, M.D.Lond., F.R.C.S., Consulting Surgeon, Stockport Infirmary, Stockport.

The Seventy-seventh Annual Meeting of the British Medical Association will be held in Belfast in July, 1909. The President's address will be delivered on Tuesday, July 27th, and the Sections will meet on the three following days. The Annual Representative Meeting will begin on Friday, July 23rd, 1909.

PROGRAMME OF BUSINESS.

The Address in Medicine will be delivered by R. W. PHILIP, M.D., F.R.C.P. Edin., Physician, Royal Infirmary, and Royal Victoria Hospital for Consumption, Edinburgh.

The Address in Surgery will be delivered by ARTHUR EDWARD JAMES BARKER, F.R.C.S., Professor of the Principles and Practice of Surgery, University College, London.

The Address in Obstetrics will be delivered by Sir JOHN W. BYERS, M.D., Professor of Midwifery and Diseases of Women, Queen's College, Belfast.

The Popular Lecture will be delivered by Dr. J. A. MACDONALD, Physician to the Taunton and Somerset Hospital, Chairman of the Representative Meetings.

THE SECTIONS.

The scientific business of the meeting will be conducted in fifteen Sections, which will meet on Wednesday, July 28th, Thursday, July 29th, and Friday, July 30th.

The President, Vice-Presidents, and Honorary Secretaries of each Section constitute a Committee of Reference for that Section, and exercise the power of inviting, accepting, or declining any paper, and of arranging the order in which accepted papers shall be read. Communications with respect to papers should be addressed to one of the Honorary Secretaries.

A paper read in the Section must not exceed fifteen minutes, and no subsequent speech must exceed ten minutes.

Papers read are the property of the British Medical Association, and cannot be published elsewhere than in the BRITISH MEDICAL JOURNAL without special permission.

The following are the general arrangements so far as they are yet complete:

ANATOMY AND PHYSIOLOGY.

President: CHARLES SCOTT SHERRINGTON, M.D., F.R.S., Physiological Laboratory, University, Liverpool.

Vice-Presidents: Professor THOMAS HUGH MILROY, M.D., F.R.S.E., Queen's College, Belfast; Professor PETER THOMPSON, M.D., King's College, Strand, London; ARTHUR PHILIP BEDDARD, M.D., F.R.C.P., 44, Seymour Street, Portman Square, London, W.; Professor ANDREW FRANCIS DIXON, M.B., D.Sc., 73, Grosvenor Road, Dublin.

Honorary Secretaries: ALEX. LOW, M.B., 142, Blenheim Place, Aberdeen; JOHN ALEX. MILROY, M.D., Queen's College, Belfast.

DERMATOLOGY AND ELECTRO-THERAPEUTICS.

President: WILLIAM CALDWELL, M.D., 6, College Gardens, Belfast.

Vice-Presidents: ROBERT BRIGGS WILD, M.D., 96, Mosley Street, Manchester; LESLIE ROBERTS, M.D., 46, Rodney Street, Liverpool.

Honorary Secretaries: JAMES HARRY SEQUEIRA, M.D., F.R.C.P., 8a, Manchester Square, London; S. ERNEST DORE, M.D., 26, New Cavendish Street, London; JOHN CAMPBELL RANKIN, M.D., 38, University Road, Belfast.

A discussion will be held on the Treatment of Skin Diseases by Radium and Radio-therapy.

DISEASES OF CHILDREN.

President: HAROLD J. STILES, F.R.C.S. Edin., 9, Great Stuart Street, Edinburgh.

Vice-Presidents: JOHN McCaw, M.D., 74, Dublin Road, Belfast; RICHARD WHYTOCK LESLIE, M.D., "St. Heliers," Strandtown, Belfast; ROBERT CAMPBELL, F.R.C.S., 21, Great Victoria Street, Belfast.

Honorary Secretaries: ANDREW FULLERTON, F.R.C.S.I., 8, University Square, Belfast; JOHN WILLIAM SIMPSON, M.D., 19, Lansdowne Crescent, Edinburgh.

It is proposed to devote some portion of three of the days on which the Section meets to the discussion of the following subjects:

Wednesday, July 28th.—Club Foot.

Thursday, July 29th.—Functional Neuroses in Children

HAEMATOLOGY AND VACCINE THERAPY.

President: SIR ALMROTH WRIGHT, M.D., F.R.S., 6, Park Crescent, Regent's Park, London, N.W.

Vice-Presidents: ALEX. GARDNER ROBB, M.B., 15, University Square, Belfast; THOMAS HOUSTON, M.D., 95, Great Victoria Street, Belfast; Captain STEWART RANKIN DOUGLAS, I.M.S., Inoculation Department, St. Mary's Hospital, London.

Honorary Secretaries: WILLIAM DUNLOP DONNAN, M.D., 12, High Street, Holywood, co. Down; DUDLEY W. CARMALT-JONES, M.B., B.Ch. Oxon., 78, Wimpole Street, London, W.

The subjects which have been chosen for discussion are:

Wednesday, July 28th.—Papers on separate subjects: Dr. Houston, Typhoid Carriers. Captain Douglas, Bacteriology of Cystitis; discussion. Dr. Fleming, Bacteriology and Vaccine Treatment of Acne.

Thursday, July 29th.—Discussion: The Early Diagnosis of Tuberculosis, opened by Professor Calmette, l'Institut Pasteur de Lille.

Friday, July 30th.—Discussion: Bacterial Infections of the Respiratory Tract other than Tuberculous.

HYGIENE AND PUBLIC HEALTH.

President: LOUIS COLTMAN PARKES, M.D., 61, Cadogan Square, Chelsea, London.

Vice-Presidents: SAMUEL AGNEW, M.D., Lurgan, co. Armagh; HENRY O'NEILL, M.D., 6, College Square East, Belfast; CHARLES KILLICK MILLARD, M.D., Town Hall, Leicester.

Honorary Secretaries: CHARLES PORTER, M.D., Public Health Department, Town Hall, Finsbury; WILLIAM McLORINAN, L.R.C.P., 103, Antrim Road, Belfast; THOMAS CARNWATH, M.B., Town Hall, Manchester.

The following subjects have been suggested for discussion:

1. The Compulsory Notification of all forms of Tuberculosis and the Mortality from Tuberculous Diseases in relation to Sex. To be opened by Dr. Harold Scurfield, Medical Officer of Health, Sheffield.

2. Latent Infections of the Diphtheria Bacillus, and the Administrative Measures required for dealing with Contacts. (Joint discussion with the Laryngological Section.)

3. The Discharge of Sewage Effluents into Tidal Waters.

The following additional subjects are also suggested:

1. Enteric Fever Carriers and Paratyphoid Bacilli.

2. Ventilation of Sewers and House Drains and the Disconnection Trap.

3. The Medical Officer of Health and School Medical Inspection.

LARYNGOLOGY, OTOTOLOGY, AND RHINOLOGY.

President: STCLAIR THOMSON, M.D., F.R.C.P., 23, Queen Anne Street, London.

Vice-Presidents: ERNEST BLECHYNDEN WAGGETT, M.B., 45, Upper Brook Street, London, W.; V. P. HENRY SMURTHWAITE, M.D., 8, St. Mary's Place, Newcastle-on-Tyne; J. A. KNOWLES RENSCHAW, M.D., 11, St. John Street, Manchester.

Honorary Secretaries: HAROLD (SHUTTLEWORTH BARWELL, F.R.C.S., 55, Wimpole Street, London; JOHN STODDART BARR, M.B., 13, Woodside Place, Glasgow; HENRY HANNA, M.B., B.Sc., 57, University Road, Belfast.

The following subjects have been selected for special discussion:

Wednesday, July 28th.—The Treatment of Tinnitus Aurium. (1) Dr. Thomas Barr (Glasgow); (2) Mr. Richard Lake (London).

Thursday, July 29th.—Latent Infections of the Diphtheria Bacillus, including the Administrative Measures required for dealing with Contacts. (In association with the Section of Hygiene and Public Health.) (1) Dr. Robert M. Buchanan (Glasgow); (2) Dr. Duncan Forbes (Brighton); (3) Dr. P. Watson Williams (Bristol).

Friday, July 30th.—The Treatment of Cicatricial Stenoses of the Larynx and Trachea. (1) Dr. H. Lambert Lack (London); (2) Dr. Delsaux (Brussels); (3) Dr. Bryson Delavan (New York).

It is proposed this year to arrange a special exhibition of skiagraphy in relation to diseases of the upper air and food passages. Members are requested to send in the titles and descriptions of any skiagraphs they propose to contribute to Dr. Hanna, not later than June 1st, so that they may be printed in the catalogue. Every care will be taken of negatives and prints, which should be carefully labelled with the owner's name and address.

MEDICINE.

President: PROFESSOR JAMES ALEXANDER LINDSAY, M.D., F.R.C.P., 3, Queen's Elms, Belfast.

Vice-Presidents: ARTHUR FOXWELL, M.D., F.R.C.P., 47, Newhall Street, Birmingham; JOSEPH FRANCIS O'CARROLL, M.D., F.R.C.P.I., 43, Merrion Square, Dublin; LAURISTON ELGIE SHAW, M.D., F.R.C.P., 64, Harley Street, London; WILLIAM BAIRD MCQUITT, M.D., 8, College Square East, Belfast.

Honorary Secretaries: JOHN SMYTH MORROW, M.D., Elm House, Antrim Road, Belfast; LEWIS ALBERT SMITH, M.D., 25, Queen Anne Street, London, W.; JOHN ELDER MACLWANE, M.D., 55, University Road, Belfast.

The following subjects have been chosen for discussion and demonstration:

1. Wednesday, July 28th.—Angina Pectoris. To be opened by Sir T. Clifford Allbutt, K.C.B.

2. Thursday, July 29th.—The Medical Aspects of Athleticism. To be opened by Dr. Tyrrell Brooks (Oxford), Dr. Clement Dukes (Rugby).

3. Friday, July 30th.—Demonstration on Gastric Illumination by Dr. Theodore Thompson.

NAVY, ARMY, AND AMBULANCE.

President: Fleet Surgeon J. LLOYD THOMAS, R.N.

Vice-Presidents: Inspector-General ROBERT BENTHAM, R.N. (retired), 22, King's Avenue, Ealing, London, W.; Lieut.-Colonel R. PORTER, R.A.M.C., P.M.O., Station Hospital, Military Barracks, Belfast; Colonel THOMAS H. HENDLEY, I.M.S., C.I.E., 4, Loudon Road, London, N.W.

Honorary Secretaries: Captain M. LOWSLEY R.A.M.C., St. Michael's Road, Aldershot; Captain HERBERT HUGH BLAIR CUNNINGHAM, M.D., F.R.C.S., 69, University Road, Belfast; Staff Surgeon EDMUND COX, M.B., R.N., The Royal Naval Hospital, Chatham; Captain WILLIAM SALISBURY-SHARPE, R.A.M.C., 8, Cleveland Terrace, Hyde Park, London, W.

The Committee of this Section suggest the following subjects:

1. Effect on Health of Service in Submarine Boats.
2. Conditions of Life in Boys' Training Establishments on Shore.

3. Medical Arrangements for War in Ships of Dreadnought type.

4. A Detailed Scheme for an Unexpected Landing Party, using Material available on Board Ship.

5. Pitfalls for the Recruiting Medical Officer.

6. Probable Effects in the Services of the New Treatment of Syphilis by means of Organic Arsenical Compounds.

7. On the Importance of the Permanent Attachment of Ample Transport under the Command of the Medical Officer to each Field Medical Unit.

8. The Infective Pneumonias, their Incidence, Causes, Prevention, and Treatment during a Campaign.

9. On the Existing Ambulance Organization of the Home Railway Companies, with Suggestions for its Amplification and Unification.

10. The Effects of Recent Research on the Work of Colonial Medical Officers.

11. Diagnosis and Treatment of Pulmonary Tuberculosis in the Services.

12. Collection and Disposal of Wounded in War.

OBSTETRICS AND GYNAECOLOGY.

President: JOHN CAMPBELL, M.D., F.R.C.S., Crescent House, University Road, Belfast.

Vice-Presidents: ROBERT ALEXANDER GIBBONS, M.D., 29, Cadogan Place, London; JOHN SINGLETON DARLING, M.B., High Street, Lurgan; CHARLES EDWIN PURSLOW, M.D., 192, Broad Street, Birmingham; EWEN JOHN MACLEAN, M.D., 12, Park Place, Cardiff.

Honorary Secretaries: HENRY THOMAS HICKS, F.R.C.S., Derby; ROBERT JAMES JOHNSTONE, M.B., F.R.C.S., 14, University Square, Belfast.

The Committee have thought it well to select two chief subjects for discussion:

1. The Treatment of the Graver Forms of Puerperal Sepsis.

2. Endometritis.

In the Pathological Part of this Section, Cancer of the Uterus has been chosen as one affording a wide scope for the exhibition of Specimens, Photographs, Microscopic Slides, etc.

These, with any others of interest, will be exhibited in the Pathological Museum.

OPHTHALMOLOGY.

President: JOHN WALTON BROWNE, M.D., 10, College Square North, Belfast.

Vice-Presidents: ARTHUR W. SANDFORD, M.D., 13, St. Patrick's Place, Cork; WILLIAM MARCUS KILLEN, M.D., 9, Clifton Street, Belfast; ALEX. HILL GRIFFITH, M.D., 17, St. John Street, Manchester.

Honorary Secretaries: JAMES ANDREW CRAIG, F.R.C.S., 11, University Square, Belfast; LESLIE JOHNSTON PATON, F.R.C.S., 1, Spanish Place, Manchester Square, London.

The subjects chosen for discussion are:

1. Eye Injuries in their Relation to the Workmen's Compensation Act.

2. Vascular Diseases of the Retina.

3. The Diseases of the Lymphoid Tissue of the Conjunctiva (Mr. Treacher Collins).

PATHOLOGY.

President: Professor WM. ST. CLAIR SYMMERS, M.B., Queen's College, Belfast.

Vice-Presidents: WALTER SYDNEY LAZARUS-BARLOW, M.D., Cancer Research Laboratory, Middlesex Hospital, London; ARTHUR EDWARD MOORE, M.B., Castlemahon, Blackrock, Cork; ASTLEY VASOUDS CLARKE, M.D., 37, London Road, Leicester; Professor I. WALKER HALL, M.D., 9, Royal Park, Clifton, Bristol.

Honorary Secretaries: ALFRED EDWARD BARNES, M.B., 343, Glossop Road, Sheffield; OTTO F. F. GRUNBAUM, M.D., 34, Wimpole Street, London, W.; WILLIAM JAMES WILSON, M.D., Pathological Laboratory, Queen's College, Belfast.

PHARMACOLOGY AND THERAPEUTICS.

President: Professor RALPH STOCKMAN, M.D., F.R.S. Edin., The University, Glasgow.

Vice-Presidents: Professor WALTER ERNEST DIXON, M.D., Pharmacological Laboratory, Cambridge; NEWMAN NEILD, M.D., 9, Richmond Hill, Clifton, Bristol.

Honorary Secretaries: VICTOR GEORGE LEOPOLD FIELDEN, M.B., 84, Dublin Road, Belfast; HECTOR CHARLES CAMERON, M.B., Guy's Hospital, London, S.E.

The following subjects have been suggested for discussion:

1. Spinal Anaesthesia.
2. The Treatment of Oedema.

PSYCHOLOGICAL MEDICINE.

President: T. CUTTERTON WOOD, M.D., 40, Margaret Street, Cavendish Square, London.

Vice-Presidents: GEORGE ROBERT LAWLESS, F.R.C.S.I., District Asylum, Armagh; WM. RICHARD DAWSON, M.D., Farnham House, Finglas, co. Dublin; ROBERT HENRY COLE, M.D., 25, Upper Berkeley Street, London, W.; MICHAEL JAMES NOLAN, L.R.C.P. and S.I., Down District Asylum, Downpatrick.

Honorary Secretaries: WALTER SAMUEL SMYTH, M.B., District Asylum, Antrim; SIDNEY HERBERT CLARKE, M.B., Leicester and Rutland Asylum, Narborough, Leicester shire.

The following subjects have been selected for special discussion in this Section:

July 28th.—(1) Somatic Delusions and Local Lesions. To be opened by Dr. C. A. Mercier.

July 29th.—(2) The Sociological Relations of Insanity in Ireland. To be opened by Dr. M. J. Nolan.

July 30th.—(3) Considerations upon the Commissioner's Report of the Care and Control of the Feeble-minded. To be opened by Dr. W. R. Dawson.

SURGERY.

President: Professor THOMAS SINCLAIR, M.D., F.R.C.S., 22, University Square, Belfast.

Vice-Presidents: CHARLES ALFRED BALLANCE, M.V.O., M.S., F.R.C.S., 106, Harley Street, W.; Sir PETER O'CONNELL, M.D., 9, College Square North, Belfast; ARTHUR JOHN DREW, F.R.C.S., Water Hall, St. Aldate's, Oxford; JOHN GALWAY COOKE, M.B., City and County Infirmary, Londonderry; ARTHUR BROWNLOW MITCHELL, F.R.C.S.I., 18, University Square, Belfast.

Honorary Secretaries: W. THELWALL THOMAS, F.R.C.S., 84, Rodney Street, Liverpool; G. LENTHAL CHEATLE, C.B., F.R.C.S., 117, Harley Street, London; HOWARD STEVENSON, M.B., F.R.C.S.I., 2, College Square North, Belfast; JAS. BERNARD MOORE, M.D., 11, Clifton Street, Belfast.

Special discussions on the following subjects will be held on Wednesday, July 28th, and Thursday, July 29th:

1. The Operative Treatment of Obstructive Jaundice and the Proper Selection of Cases. Introduced by (1) Mr. B. G. A. Moynihan, F.R.C.S.; (2) Sir Thomas Myles, F.R.C.S.

2. Modern Methods in the Treatment of Tuberculous Disease of Joints. Introduced by (1) Sir William Macewen, F.R.S.; (2) Mr. Robert Jones.

Friday, July 30th, will be devoted to the reading of papers on subjects other than the above.

Facilities will be provided for showing specimens and drawings to illustrate subjects under discussion.

TROPICAL MEDICINE.

President: CHARLES WILBERFORCE DANIELS, M.B., London School of Tropical Medicine, Albert Docks, London.

Vice-Presidents: Lieutenant-Colonel ANDREW DEANE, M.D., F.R.C.S.I., I.M.S., Royal Victoria Hospital, Belfast; Surgeon-General W. R. BROWNE, M.D., C.I.E., 5, Royal Crescent, Holland Park Avenue, London.

Honorary Secretaries: JAMES COLVILLE, M.D., 7, University Square, Belfast; Dr. ANTON BEERL, Director Runcorn Research Laboratories.

The following subjects have been selected for discussion:

Wednesday, July 28th, 10 a.m.—Persistence of the Tropical Diseases of Man due to Protozoa. The discussion will be opened by the President.

Thursday, July 29th, 10 a.m.—Treatment of Chronic Recurrent Dysentery, with Special Reference to the Possibilities of Surgical Treatment. The discussion will be opened by Mr. J. Cantlie.

Friday, July 30th, 10 a.m.—Feeding and Treatment of Children in the Tropics. The discussion will be opened by Dr. W. Carnegie Brown.

The Committee will be glad to receive pathological specimens, photographs, drawings, or microscopical preparations illustrative of any subject in Tropical Medicine.

PROVISIONAL TIME TABLE.

FRIDAY, JULY 23RD, 1909.

12 noon.—Annual General Meeting, followed by Representative Meeting.

SATURDAY, JULY 24TH, 1909.

9.30 a.m.—Representative Meeting.

MONDAY, JULY 26TH, 1909.

10 a.m.—Representative Meeting.

7.30 p.m.—Annual Conference of Secretaries of Divisions and Branches.

TUESDAY, JULY 27TH, 1909.

10 a.m.—Council Meeting.

10.30 a.m.—Representative Meeting (if required).

2.30 p.m.—Adjourned General Meeting.
Induction of President.

8.30 p.m.—President's Address.

WEDNESDAY, JULY 28TH, 1909.

9.30 a.m.—Council Meeting.

10 a.m.—Sectional Meetings.

10.30 a.m.—Representative Meeting (if required).

12.30 p.m.—Address in Medicine.

7.30 p.m.—Annual Dinner.

THURSDAY, JULY 29TH, 1909.

a.m.—National Temperance League Breakfast.

9.30 a.m.—Council Meeting.

10 a.m.—Sectional Meetings.

12.30 p.m.—Address in Surgery.

8.30 p.m.—Reception.

FRIDAY, JULY 30TH, 1909.

10 a.m.—Sectional Meetings.

12.30 p.m.—Address in Obstetrics.

8 p.m.—Popular Lecture.

8.30 p.m.—Reception.

SATURDAY, JULY 31ST, 1909.

Excursions.

Honorary Local Secretaries—

HENRY LAWRENCE MCKISACK, M.D., M.R.C.P.,
17, University Square, Belfast.

CRCIL EDWARD SHAW, M.A., M.D., M.Ch.,
29, University Square, Belfast.

HOWARD STEVENSON, B.A., M.B., F.R.C.S.I.,
2, College Square North, Belfast.

THE PATHOLOGICAL MUSEUM.

The following Committee has been appointed to organize the pathological museum:

President: Professor W. ST. CLAIR SYMMERS.
Honorary Secretaries: THOMAS HOUSTON, M.D.;
W. J. WILSON, M.D.

J. S. DICKIE, M.B.
ROWLAND HILL, M.B.
C. G. LOWRY, M.D.
J. E. MACILWAINE, M.D.
JOHN M'LEISH, M.B.
W. J. MAGUIRE, M.D.
J. C. RANKIN, M.D.
FRED. SMYTH, M.D.
BERNIST WEALES, M.D.
J. SINGLETON DARLING, M.D. (Lurgan).

C. H. P. D. GRAVES, M.D. (Cookstown).
Professor McWEENEY (Dublin).
Professor MOORE (Cork).
C. H. NESBITT, M.D. (Randallstown).
Professor O'SULLIVAN (Dublin).
R. T. ROWLETTE, M.D. (Dublin).
Professor WHITE (Dublin).
JOHN WILSON, M.D. (Castleblaney).

EX-OFFICIO MEMBERS.

The President-elect: Sir WILLIAM WHITLA, M.D., LL.D.
The Local Honorary Treasurer: JOSEPH NELSON, M.D.
The Local Honorary Secretaries: H. L. MCKISACK, M.D.; C. E. SHAW, M.D.; HOWARD STEVENSON, F.R.C.S.I.

The Committee propose that the material should be arranged under the following heads:

- I. Exhibits bearing on discussions and papers in the various sections.
 - II. Specimens and illustrations relating to any research work.
 - III. Instruments relating to clinical diagnosis and pathological investigation.
 - IV. Individual specimens of special interest, or a series illustrating some special subject.
- It is also proposed to make a special effort to gather together a series of exhibits relating to:
- (a) Tuberculosis.
 - (b) Diseases of warm climates.
 - (c) Cancer of the uterus.
 - (d) X-rays and photography.

The Committee wish it to be understood that the above are only suggestions, and if there is any subject in which Members are specially interested, and of which interesting specimens can be supplied, they will be glad to hear from them.

The Museum will occupy a central position, and will be easy of access.

It is hoped that it will be possible for arrangements to be made whereby exhibitors may have an opportunity of demonstrating their specimens.

THOMAS HOUSTON,
W. J. WILSON,
Honorary Secretaries.

Communications should be addressed to one of the Honorary Secretaries at Queen's University, Belfast.

RECREATIONS.

Golf Competition.—The Ulster Medical Society has arranged to present to the British Medical Association a cup, to be known as the "Belfast Cup," to be played for at annual meetings, and to be won out and out by any member winning it three times. It will be played for on the Friday of the Belfast meeting, on the fine links of the County Down Club at Newcastle, co. Down, kindly lent for the day by the council and members of the club. The play will be by bogey score. The cup is designed after the famous Ardagh Cup, one of the finest examples of ancient Irish work, which is now in the Kildare Street Museum in Dublin. The original is composed of gold, silver, enamels, and jewels, and was, it is believed, meant for use as a chalice. The challenge cup will be of silver, about 9 in. high, with gilt panels and coloured enamel bosses; round it will be set stones representing the four Provinces of Ireland—the black pebble for Leinster, the white or Carnmoney pebble for Ulster, the red stone for Munster, and the green Connemara marble for Connaught.

Cricket Match.—The North of Ireland Cricket Club, the premier club of Ulster, and one of the best in Ireland, has kindly offered to play a one-day match against a British Medical Association team. The beautifully turf-ed grounds of the club are only about five minutes' walk from Queen's College, where the Association will meet. The local executive will be very glad if some English cricketer will undertake to organize a team for the occasion; any one interested in the matter should communicate with one of the Honorary Local Secretaries.

Launch.—The local executive has some reason to hope that there may be an opportunity during the annual meeting of witnessing the launch of one of the great steamships for which the shipyards of the city of Belfast are famous. A large vessel for the Orient Line is at present on the stocks in Messrs. Workman, Clark, and Co.'s yard, and is expected to be launched in July. The exact date cannot be settled so far ahead, but if the firm can make it coincide with the visit of the Association to Belfast, it has courteously promised to do so.

To ensure the insertion of notices in this column, they must be received at the Central Offices of the Association not later than the first post on Tuesday.

Association Notices.

ANNUAL GENERAL MEETING.

Notice is hereby given that the 1909 Annual General Meeting of the British Medical Association will be held in the Assembly Hall, Belfast, on Friday, July 23rd, at Twelve noon.

[This Meeting is to comply with Article XII, and will adjourn forthwith until Tuesday, July 27th, at 2.30 o'clock.]

ANNUAL REPRESENTATIVE MEETING.

Also, notice is hereby given that the 1909 Annual Representative Meeting will be held in the Assembly Hall, Belfast, on Friday, July 23rd (and following days as required), immediately after the Annual General Meeting, fixed for Twelve noon, on Friday, July 23rd.

BY ORDER OF THE COUNCIL,

GUY ELLISTON.

May, 1909.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BATH AND BRISTOL BRANCH: TROWERIDGE DIVISION.—The annual meeting of this Division will be held at the Town Hall, Trowbridge, on Saturday, May 29th, at 3 p.m. Agenda: (1) To elect officers. (2) To receive financial statement. (3) To consider matters referred to Divisions: (a) Report on medical certification of suitability of patients for hospital treatment (see SUPPLEMENT TO BRITISH MEDICAL JOURNAL, February 27th). (b) Report on contributions to hospitals by employers of labour and employees (see SUPPLEMENT TO BRITISH MEDICAL JOURNAL, February 27th). (c) Statement as to fresh public medical institutions:—The Council, acting upon an instruction from the Annual Representative Meeting at Sheffield, refers the following motion for the consideration of the Divisions: "That it is desirable that no fresh public medical institution should be opened without previous consultation with the local medical profession through some organized body, such as the Division of the British Medical Association in the area of which it is proposed to establish such new institution, and that it be an instruction to the Council to give effect to this principle in considering applications from Divisions or Branches for support in dealing with hospital questions." The Council will be glad to receive from the Divisions their expressions of opinion on the subject. (d) Statement as to sanatoriums for workers suffering from tuberculosis. (4) To consider question of examination of recruits for the Territorial Forces. (5) To consider report on current work of Association.—JAMES PEARSE, M.D., Honorary Secretary.

BORDER COUNTIES BRANCH.—The annual general meeting of the Branch will be held in the County Hotel, Carlisle, on Friday, June 25th. Business: To receive the report of the council for the past year; to elect the officers of the Branch; and Dr. Murdoch, of Annan, will deliver his Presidential address. Further details of information will be sent to each member by post.—FRANCIS R. HILL, Honorary Secretary, 62, Warwick Road, Carlisle.

BORDER COUNTIES AND NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCHES.—*Election of Representative Member of Central Council.*—Nominations, in accordance with the regulations of the Association, must be sent to me in writing on or before May 31st.—A. S. BARLING, Queen Square, Lancaster.

BORDER COUNTIES BRANCH: SCOTTISH DIVISION.—The annual general meeting of this Division will be held on Friday, June 4th, at the Dumfries and Galloway Royal Infirmary, Dumfries, at 3 p.m.—GEORGE R. LIVINGSTON, Honorary Secretary.

EAST ANGLIAN BRANCH.—Nominations for the election of Representative Members of Central Council must be forwarded to me not later than June 1st next.—E. H. NICHOLSON, East Lodge, Colchester, Honorary Secretary.

EAST ANGLIAN BRANCH.—The annual meeting of the Branch will be held at the Grand Hotel, Clacton-on-Sea, on Thursday, July 1st.—B. H. NICHOLSON, East Lodge, Colchester, Honorary Secretary.

EAST YORK AND NORTH LINCOLN BRANCH.—The annual meeting of this Branch will be held at the Grimsby Hospital on Saturday, June 19th. Further particulars as to the time of meeting and business to be transacted will be published later in the JOURNAL and communicated by circular to each member. Nominations for the offices of (1) President-elect, (2) Vice-President, (3) Honorary Secretary and Honorary Treasurer must be in the hands of the Honorary Secretary before May 29th, in writing and signed by any three members of the Branch.—EDWARD TURTON, M.D., Honorary Secretary, 1, Albion Street, Hull.

EAST YORK AND NORTH LINCOLN AND CAMBRIDGE AND HUNTINGDON BRANCHES.—*Election of the Joint Representative on the Central Council of the Association.*—Nominations of candidates must be sent in writing, on or before May 29th next, to EDWARD TURTON, Branch Secretary, 1, Albion Street, Hull.

EDINBURGH AND FIFE BRANCHES.—The attention of members of these two Branches is drawn to the fact that nominations for the election of two members upon the Central Council of the Association should be sent in to one of the Secretaries not later than June 16th.—A. LOGAN TURNER, 27, Walker Street, Edinburgh; FRANCIS D. BOYD, 22, Manor Place, Edinburgh; BALFOUR GRAHAM, Leven, Fife.

FIFE BRANCH.—The seventh annual meeting will be held in the Hotel, Thornton, on Thursday, June 17th, at 3 p.m.—R. BALFOUR GRAHAM, Honorary Secretary, Leven.

GLASGOW AND WEST OF SCOTLAND BRANCH.—The annual meeting of the above Branch will be held in the Pathological Department, Western Infirmary, Glasgow, on Wednesday, June 9th, at 3 p.m. Business: (1) Minutes of previous meetings, (a) annual meeting, (b) special meeting; (2) reports—(a) secretary's, (b) treasurer's, (c) on the abuse of medical charity, (d) payment for attendance on street accidents; (3) election of office-bearers. At 4.30 p.m. Professor Robert Muir and assistants will give a pathological demonstration.—JAMES GRANT ANDREW, Honorary Secretary.

LANCASHIRE AND CHESHIRE BRANCH.—The annual meeting of the Branch will be held at Chester on Wednesday, June 16th. Members desiring to make scientific, clinical, or other communications will please communicate at once with the Branch Secretary, F. CHARLES LARKIN, 54, Rodney Street, Liverpool.

LANCASHIRE AND CHESHIRE BRANCH: ALTRINCHAM DIVISION.—The annual meeting will be held at the Board Room of the Altrincham Hospital at 5 p.m. on Thursday, June 10th. (Afternoon tea 4.30 p.m.) The principal business is the appointment of officers and committee for 1909-10. Every member is eligible for every office; nominations in writing, and signed, may be sent to the Honorary Secretary at any time before June 8th. The membership of the committee lapses also at this date. Dinner at the Brooklands Hotel, 7.15 p.m. Names must be given to the Honorary Secretary not later than first post on June 10th. *Clinical and Scientific Meeting.*—A meeting will be held at the Board Room of the Altrincham Hospital at 5 p.m. on Thursday, June 24th. (Afternoon tea 4.30 p.m.) Clinical cases will be shown, and Dr. Rhodes will read a paper on Scarlet Fever, to be followed by a discussion. Dinner at the Brooklands Hotel, 7.30 p.m. Ladies invited. Names must be given to the Honorary Secretary by Monday, June 21st, in order that he may have time to cancel the arrangement, so far as the ladies are concerned, if there are not sufficient acceptances (say, five or six at least). The committee hopes that this will not be necessary, but if it is the dinner will be held under ordinary conditions, members to give their names not later than first post on June 24th. (If any alteration of programme becomes necessary it will be advertised in the SUPPLEMENT, which members should consult regularly.)—T. W. H. GARSTANG, Honorary Secretary.

METROPOLITAN COUNTIES BRANCH.—*Nominations of Branch Officers.*—Pursuant to By-law 25, notice is hereby given that nominations for all the officers of the Branch—namely, President-elect, Vice-Presidents, Secretary, members of the Branch on the Central Council of the Association—must be sent in to the Honorary Secretary of the Branch on or before May 29th. Voting papers will be sent out on or before June 5th, and must be returned to the Secretary on or before June 12th.—ATWOOD THORNE, E. W. GOODALL, Honorary Secretaries.

METROPOLITAN COUNTIES BRANCH: WESTMINSTER DIVISION.—The annual meeting of the Division will be held on Thursday, June 3rd, at the Criterion Restaurant. Agenda: At 7.30 p.m. the members will dine together. 8.30 p.m. Association business: (1) Usual business. (2) Election of officers for the ensuing year. The following gentlemen have been nominated by the Executive Committee, but it is open to any member to propose other names for election at the meeting: President, Dr. Dauber; Vice-President, Dr. F. J. Allan; Honorary Secretary and Treasurer, Mr. Howell Evans; Assistant Honorary Secretary, Dr. Milligan; Representative in Representative Meetings, Dr. Haslip; Representatives on Branch Council, Drs. Archer, Finucane, Dauber, Howell Evans, and Hilliard; Executive Committee, Drs. Allan, Archer, Copley, Cope, Dauber, Durham, Evans, Ewart, Finucane, Haslip, Hilliard, Milligan, Inglis Parsons, Roche, Sibley, and Spencer. (3) Honorary Treasurer's Report. 9 p.m., Sir Lauder Brunton, Bart., M.D., F.R.C.P., will read a paper on Blood Pressure in Man; its Estimation and Indications for Treatment. Members desiring to be present at the dinner (price 5s.) are requested to notify Mr. Howell Evans, but are informed that in the event of their being prevented from attending the dinner after they have notified their intention to do so, they will be expected to pay for the dinner ordered on their behalf, as considerable inconvenience has been caused in the past between the Honorary Secretaries and the restaurant proprietors owing to provision having been made for members who have failed to attend after stating that they would do so.—J. HOWELL EVANS, 25, Berkeley Square, W.; W. A. MILLIGAN, 11, Upper Brook Street, Honorary Secretaries.

MIDLAND BRANCH.—The annual meeting of this Branch will be held at the Leicester Infirmary on Thursday, June 10th. (1) The President-elect, Dr. R. Pratt, will give an address. (2) Election of Branch officers. (3) Annual report of the Branch. (4) Any other business. In accordance with the by-laws, notice is hereby given that nominations for the election of two Representatives of this Branch on the Central Council must be sent to the Honorary Secretary of the Branch not later than May 24th.—ROBERT SEVESTRE, Honorary Secretary, London Road, Leicester.

MUNSTER BRANCH.—Nominations for a Representative of the Branch on the Central Council (in accordance with By-law 24) will be received up to June 5th by PHILIP G. LEE, 26, St. Patrick's Hill, Cork, Honorary Secretary.

MUNSTER BRANCH.—The annual general meeting of the Branch will be held on Saturday, June 12th, at 4.30 p.m., in the Rooms of the Medical Society, 74, South Mall, Cork. Representatives, officers, and council for 1909-10 will be elected, and any other necessary business transacted.—PHILIP G. LEE, 26, St. Patrick's Hill, Cork, Honorary Secretary.

NORTH OF ENGLAND BRANCH.—Nominations for the election of members of the Central Council must be sent in to me on or before May 31st.—DAVID F. TODD, Honorary Secretary, Beech House, Sunderland.

NORTH WALES BRANCH.—Nominations for the election of a Representative on the Central Council and for other officers of the Branch for the next year, in accordance with By-law 25, must be sent to the Honorary Secretary on or before June 1st.—H. JONES ROBERTS, Honorary Secretary, Llywenarth, Pen-y-groes.

NORTHERN COUNTIES OF SCOTLAND BRANCH.—*Election of Representative of the Branch on the Central Council of the Association.*—Nominations of candidates for election to the Central Council must be forwarded to the Honorary Secretary on or before May 29th.—J. MUNRO MOIR, M.D., 4, Ardross Terrace, Inverness, Honorary Secretary.

NORTHERN COUNTIES OF SCOTLAND BRANCH.—The annual meeting of the Branch will be held at Elgin on Saturday, June 5th. Further particulars as to hour and place of meeting will be communicated to each member by circular.—J. MUNRO MOIR, M.D., Honorary Secretary, 4, Ardross Terrace, Inverness.

PERTSHIRE BRANCH.—The summer meeting will be held in the Golf Club House, Moncreiffe Island, Perth, on Friday, June 4th, at 1 p.m. prompt. Council meeting at 12.45. Business: (1) Read minutes. (2) Election of Council. (3) Election of Branch Representative. (4) Consider letter from Medical Secretary re appointment of Branch Representative in autumn. (5) Consider Report of the Committee of the Association on

Ophthalmia Neonatorum (see SUPPLEMENT, BRITISH MEDICAL JOURNAL, May 8th, 1909). Lunch will be served in the Club House at 2 p.m. on arrival of golfing members from Dundee. Members attending to play and lunch are requested to inform Dr. Taylor as soon as possible.—W. A. TAYLOR, ALEX. TROTTER, Joint Honorary Secretaries, Perth.

SOUTH-EASTERN BRANCH.—The annual meeting of this Branch will be held at Crovdon on Wednesday, June 23rd, Dr. J. J. Macan, President-elect, in the chair. The following will be the agenda:—(1) To elect the officers of the Branch. (2) To receive the annual report of the Branch. (3) To transact any business that may be transacted by an ordinary meeting. Three members to represent the Branch on the Central Council will also be elected by voting papers.—H. M. STEWART, Honorary Secretary, Dulwich.

SOUTH-EASTERN BRANCH: FOLKESTONE DIVISION.—The annual meeting of this Division will be held at Hotel Wampach, Folkestone, on Saturday, May 29th, at 8.45 p.m. Agenda: (1) Minutes. (2) Election of Representative of Division on Branch Council, officers of Executive Committee, Representative at Representative Meeting, President, and Secretary. (2) Annual report of the Executive Committee. (3) Any other business.—P. VERNON DODD, M.D., Honorary Secretary.

SOUTH-EASTERN BRANCH: MAIDSTONE DIVISION.—The next meeting of this Division will take place on Thursday, June 17th, for the purpose of electing officers for the ensuing year. It has been proposed to have a dinner afterwards. The Honorary Secretary would feel greatly obliged if each member would kindly intimate his intention of being present or not as early as possible.—GEORGE POTTS, Honorary Secretary.

SOUTH-EASTERN OF IRELAND BRANCH.—A meeting of this Branch, as also a meeting of the Branch Council and the local Division, will be held at Council Chamber, Clonmel, on Wednesday, June 2nd, at 12.0 noon. Agenda: (1) Minutes of last meeting. (2) Letters of apology. (3) Correspondence. (4) Dr. D. Walshe will move: "That in any legislation that may follow the reports of the Royal and Viceroyal Commissions to inquire into the working of the Poor Laws, the British Medical Association be requested to use all its influence to safeguard the interests of the Irish dispensary medical officers and medical officers to workhouses, and to secure: (a) That entrance to the Irish Poor Law medical service shall be by competitive examination; (b) that adequate salaries shall be fixed, and (c) superannuation allowances be made compulsory on the lines of civil service superannuation regulations." (5) Dr. Laflin will move at next meeting: "That members be requested to contribute 2s. 6d. each annually towards a dinner fund, whether they attend or not, the proceeds to be allocated proportionately to each Division centre (wines and tobacco not included), and any deficit to be supplied by those actually present at dinner." (6) Any other business.—J. QUIRKE, Honorary Secretary, Piltown.

ULSTER BRANCH.—Nominations for the offices of President Treasurer and Secretary each signed by two members, should be sent not later than June 2nd to CECIL SHAW, M.D., Honorary Secretary, 29, University Square, Belfast.

ULSTER AND CONNAUGHT BRANCHES.—Two members to represent the combined Branches on the Central Council will be elected next month. Nominations, signed by three members, should be sent to me not later than June 2nd to CECIL SHAW, M.D., Honorary Secretary, Ulster Branch, 29, University Square, Belfast.

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH.—The annual meeting of this Branch will be held at Malvern on Thursday, June 10th. To elect Branch officers and appoint members to the Central Council of the Association; to receive annual report of the Branch, and for any other business. Dinner.—C. S. MORRISON, Honorary Secretary.

YORKSHIRE BRANCH.—Nominations for the election of Representative members of the Central Council (two), each signed by at least three members, must be forwarded to me not later than June 15th. The present Representatives are Drs. Godver and Sinclair White.—ADOLPH BRONNER, Honorary Secretary, 33, Manor Row, Bradford.

YORKSHIRE BRANCH.—The annual meeting of the Branch will be held at the Grand Hotel, Scarborough, on Saturday, June 26th.—ADOLPH BRONNER, Honorary Secretary, 33, Manor Row, Bradford.

YORKSHIRE BRANCH: BRADFORD DIVISION.—The annual meeting of the Division will be held on June 8th, at 8.30 p.m. Particulars of the agenda will follow later.—J. BEATTIE DUNLOP, J. WHERRY WILSON, Honorary Secretaries.

Meetings of Branches & Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

BIRMINGHAM BRANCH: CENTRAL DIVISION.

A SPECIAL and general meeting was held at the Medical Institute on Wednesday, May 19th, at 3.30 p.m. Mr. GANGE was in the chair, and there were present: Drs. Dale, W. R. Jordan, Kirby, Branson, Oakes, Beicher, Aldren, Mason, and White. Messrs. F. Jordan, Marsh, and Lucas, with the Honorary Secretaries (Mr. Nuthall and Dr. Lydall).

Addition to Rules.—After declaring the meeting special, the CHAIRMAN moved the following as an addition to the Rules of the Division:

That the Representative shall submit his report to the first General Meeting of the Division held after the Annual Representative Meeting.

This was seconded and carried unanimously. This was all the special business.

GENERAL MEETING.

Confirmation of Minutes.—The HONORARY SECRETARY read the minutes of the previous meeting, which were confirmed and signed.

Appointment of a Canvassing Committee.—A proposal to appoint a Canvassing Committee was carried, and the following gentlemen were proposed as members: Drs. Kirby, Aldren, McCall, De Vall, Duncan, Caddick, Sproat, Sawyer, and Wilkins, with Messrs. F. Jordan and Leedham-Green. It was decided to include the Chairman and Honorary Secretaries as *ex-officio* members. The following resolution was carried:

That the Representatives of this Division on the Branch Council be instructed to bring before the notice of this body the appointment of a Canvassing Committee by the Division with a view to obtaining a similar committee for the whole Branch to secure its better organization.

Instructions to Representative.—With reference to the motions as to the representation of the local medical profession on boards of hospitals and similar bodies (SUPPLEMENT, April 10th) the meeting decided as follows: (a. Motion by the Hampstead Division):—

That in the opinion of this Division this is undesirable.

(b. Motion by the Wandsworth Division):

(i) That this is impracticable.

(ii) As (i) has been pronounced impracticable, this was not considered.

In regard to the motions to be discussed at the Annual Representative Meeting, notice of which was published in the SUPPLEMENT of April 24th, the following decisions were arrived at:

The motions by the Liverpool Division (Election of Representatives) were approved, and the Representative was instructed to support them: as also the four motions affecting the present regulations of the Association—two submitted by the Council, and one each by the Dundee Branch and Gateshead Division. The Representative was instructed to exercise his discretion with regard to the Wandsworth proposal (Method of Distribution of Capitation Grants), and to strongly support the motion sent by the Waterford Division (the BRITISH MEDICAL JOURNAL). The resolution by the Waterford Division (Appointment of *Materia Medica* Committee) raised a prolonged discussion. The CHAIRMAN announced that the Executive agreed with the principle of the resolution, but could not see its way to support it as it stood. He further stated that a Subcommittee had been appointed to draft an amendment, and that this amendment should be printed upon the notice convening the next meeting. Under these circumstances the further consideration of the resolution was deferred. The Representative was instructed to oppose the motion of the Wandsworth Division (Scientific Work of the Association) and to support the two following motions, both submitted by the Wandsworth Division: Promulgation of Policy of the Association, and Representatives at the United Kingdom

Hospitals Conference. Instructions were given to oppose, pending the report of the Contract Practice Subcommittee, the Wandsworth motion (Contract Practice) and the St. Pancras and Islington motion (Public Medical Service). The second "Contract Practice" resolution from the Wandsworth Division was left to the Representative's discretion, as was the motion (Hospital Administration) by the Waterford Division. It was decided to support the Wandsworth Division's amendment to the Hospitals Committee's report and recommendation, but to propose as an amendment to the Wandsworth Division's resolution (Management of General and Cottage Hospitals) to omit the words "General and" in the first line. The Representative was instructed to remain neutral with regard to the Waterford Division's resolution (Medical Teaching), but to oppose the motion (Medical Examinations) by the same Division.

Sanatoriums for Workers.—The statement on sanatoriums for workers suffering from tuberculosis—a copy of which had been circulated to all members of the Division—was next considered. The CHAIRMAN, on behalf of the Executive, moved:

That the statement be approved.

A letter from Dr. Wynn was read, pointing out the necessity for special medical referees in order to maintain a uniform standard for admission to such sanatoriums, and as an amendment to the Executive's proposal the following was moved:

That referees are necessary, and should be paid.

This, on being put to the meeting, was carried, and was adopted when put as a substantive resolution.

This concluded the business.

CAPE OF GOOD HOPE—EASTERN PROVINCE BRANCH.

A MEETING of this Branch was held at 8 p.m. on Friday, April 16th, at the Association's library at Rhodes College. Dr. G. E. FITZGERALD, President, in the chair. There were also present Drs. Bruce Bays, A. Coxper, Dru Drury, Harrison, Lillie, Mullins, A. J. Lea, and G. C. Purvis, also Dr. W. A. MacFadyen of Rhodes College as a visitor.

Incompletely Addressed Telegrams.—It was resolved that a letter should be addressed to the editors of the local papers summarizing the recent correspondence with the Postmaster-General on the subject of the non-delivery of incompletely addressed telegrams, and suggesting the remedy of fuller addresses, which lies in the hands of the public.

Storage of Pathological Specimens.—The erection of shelving for the storage of pathological specimens was left to the Council with power to act.

Colonial Medical Council.—The minutes of the proceedings of the Colonial Medical Council, supplied by the courtesy of the Council, were laid on the table. A discussion then took place on the report of the Uptington Committee, and generally on the present position of the Colonial Medical Council. The discussion was opened by the SECRETARY, who reviewed the history of the medical legislation of the Cape from 1823 onwards, the findings of the three Select Committees, and the wishes of the medical rank and file at the present day. It was resolved:

That this meeting of the Eastern Province Branch of the British Medical Association agrees with the recommendations of the Majority Report of the Select Committee on the 6th Colonial Medical Council.

It was resolved:

That this meeting of the Eastern Province Branch of the British Medical Association is also in accord with the resolutions of the Western Branch of the British Medical Association on the clauses of the Majority Report.

Amendment of the Medical Acts.—It was resolved:

That this meeting of the Eastern Province Branch of the British Medical Association agrees with the amendments of the Medical Acts proposed by the Western Branch, many of which have been approved by the Colonial Medical Council; but that this meeting excepts Amendment 9, repealing Section 4 of Act 7 of 1899, which amendment should be modified so as to bring it into line with Section 4 (3) of the Majority Report; and also amendment 10, which proposes the deletion of the word "dentist" from Section 7 of Act 7 of 1899.

This meeting cannot view with complacency the placing of a veto upon the practice of any branch of the art of surgery by a qualified medical practitioner.

It was resolved:

That this meeting of the Eastern Province Branch of the British Medical Association is glad to acknowledge the assistance which the Colonial Medical Council is giving to the Branches of the British Medical Association in following the work of the Council.

Nothing but good to the profession can result from the fullest interchange of ideas between these bodies.

A well founded belief that the Council is not only desirous to protect the public from defaulters within the profession, but is also determined to suppress irregular practitioners, would be the best remedy for the alleged "want of confidence in the Council" referred to by the Select Committee in their report.

The South African Medical Record.—Resolved:

That this meeting of the Eastern Province Branch of the British Medical Association regrets that a *priceis* of the proceedings of the Colonial Medical Council no longer appears in the *South African Medical Record*; and that a copy of this resolution be sent to the Colonial Medical Council and to Dr. Darley-Hartley.

It was also resolved:

That this meeting of the Eastern Province Branch of the British Medical Association regrets that advertisements of State medical appointments have ceased to appear in the pages of the *South African Medical Record*, the only medical paper which is published in the Cape Colony; and that a copy of this resolution be sent to the Honorary Colonial Secretary and to Dr. Darley-Hartley.

DORSET AND WEST HANTS BRANCH.

THE spring meeting of this Branch was held in the Dorset County Hospital, Dorchester, on Wednesday, May 5th. The PRESIDENT, Mr. J. A. Hosker, J.P., was in the chair, and there were present: Dr. Davison, Dr. Howard, Dr. Manning, Dr. Humphrey Davy, Dr. Johns, Dr. Mary Jeremy, Dr. MacDonald, Dr. Macpherson Lawrie, D.L., J.P., Dr. Rorie, Dr. Grey-Edwards, Dr. Clift, Dr. Eleanor Boud, Dr. Flower, Dr. Whittingdale, Dr. Martin, Dr. Greves, Dr. Sanderson-Wells, Dr. Le Fleming, Dr. Snow, Dr. Luther, Dr. Ramsay, Dr. Telford Smith, Dr. Johnson Smyth, Mr. Charles J. Marsh, Mr. Dodd, Mr. de Castro, Mr. Rendall, Mr. Newbold, Mr. Robinson, Mr. Carrington, Mr. Whittaker, Mr. Dalton, Mr. Greenwood, Mr. Burdwood, Mr. Good, Mr. Hawkins, Mr. Geo. Flower, Mr. Burrough Cosens, Mr. C. H. Watts Parkinson, Mr. Montgomery, J.P., Mr. Bushman, Mr. MacCarthy, Mr. Unwin, Mr. Simmons.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed. The minutes of the special meeting held in Bournemouth on March 2nd were read and confirmed.

Apologies for Non-attendance.—Letters of apology for non attendance were read from Mr. Decimus Curme and Dr. D. M. Ross.

Financial Statement.—The HONORARY TREASURER presented his accounts and financial statement for 1908.

Reports from Divisions and Branch Council.—Reports from the Divisions were read, and also the report from the Council of the Branch for 1908.

New Members.—It was announced that Harold Arthur Robert Edward Unwin, of Penn Hill, Yeovil, Somerset, M.B., B.C.Camb., F.R.C.S.Eng., and James Austin Dickie, of Seacroft, Poole, Dorset, M.B., Ch.B. Glasgow, had that day been elected by the Branch Council members of the British Medical Association.

Election of Representative on Central Council.—The PRESIDENT reported that there had been a contest for the office of Representative of this and the West Somerset Branches on the Central Council of the Association. The candidates were Dr. James Davison, of Bournemouth, and Mr. C. H. Watts Parkinson, of Wimborne. The votes cast in favour of Dr. Davison were 123 and for Mr. Parkinson 76. Dr. Davison was therefore declared duly elected a member of the Council of the Association. Dr. DAVISON thanked the members for the honour they had conferred upon him by electing him their Representative on the Council of the Association by so substantial a majority of votes. It was a very high compliment indeed, and one which he deeply appreciated. He assured them he would do his best to serve them in this capacity as well as in that of Honorary Secretary.

Installation of New President.—The PRESIDENT now vacated the chair, and in an appropriate speech introduced his successor, Mr. Charles J. Marsh, L.R.C.P. Edin., M.R.C.S. Eng.

Vote of Thanks to Retiring President.—On the motion of Mr. MARSH, seconded by Dr. HYLIA GREVES, a most cordial vote of thanks was awarded by acclamation to the retiring President for the thorough, courteous, and efficient manner in which he had conducted the affairs of the Branch during his year of office. Mr. HOSKER suitably replied.

Summer Meeting.—It was decided on the motion of Dr. MACPHERSON LAWRIE, seconded by Dr. JOHNSON SMYTH, to hold the summer meeting in Christchurch early in July.

President's Address.

The PRESIDENT chose as the subject of his address the various phases of infancy and childhood.

It was calculated that one-third of all children died before reaching the age of reason; this, in a great measure, must be due to ignorance on the part of those who had the bringing up of them. Of the two-thirds who escaped the grave, how many carried throughout life fetters which had been forged in childhood from the same cause, resulting too often in impaired health and dangerous operations which should be prevented? To mention only some of the most obvious, how many suffered in after-life from the effects of improper feeding, neglected teeth, tight garters, tight boots in childhood?

Measures promoting moral, intellectual, and social advancement of people would reduce infant mortality, vice, intemperance, overcrowding, and ignorance. There was work for ministers of religion as well as ministers of health: let them unite in trying to lessen the brutalizing influence of low surroundings and raise up laudable ambitions of self-betterment, decency, and cleanliness.

Every one would admit that one of the chief factors in promoting a high death-rate amongst children was the improper feeding of infants. Could they not as a body take a firmer stand, and drive home more thoroughly the absolute necessity of healthy mothers bringing up their offspring at the breast? Statistics showed clearly that the mortality was markedly less amongst breast-fed children than amongst those fed artificially. In insisting on this point, however, every care should be taken to see that nursing was never allowed to exceed nine months. Still more important was it to prevent mothers who were unhealthy, and especially those in whom there was the slightest suspicion of tubercle, from nursing their babies. If this were done thoroughly, he believed they would hear less about the hereditary tendency to this terrible disease. He knew cases where the mother who had not actually developed any sign of tubercle when the first child had been born had suckled the baby for even a few weeks only—it had developed phthisis later in life; whereas children born to her later, when phthisis was strongly pronounced and who had been brought up on cow's milk from the very commencement, had grown up into strong and healthy young people.

For the ordinary healthy infant in cases where the mother must not give her child the breast the best substitute was cow's milk diluted with barley water, with cream added in varying proportions as age advanced, and nothing but this until teeth had appeared. If they had not appeared by the eighth month, a little fresh gravy should be added. He was not going into the question of sterilized milk; and with regard to preserved or condensed milk and the various modifications and prepared foods with which the country was flooded, he could simply say they were not substitutes for fresh milk; some babies might seem to thrive on them, but trouble would frequently arise later. It was, of course, unnecessary to refer to the harmful effects of tea, coffee, and stimulants.

In manufacturing districts the percentage of mortality was about 180 per 1,000, in Wilts and Dorset 95 per 1,000, clearly indicating that stronger infants were born and more reared in rural than in populous districts; and, of course, in manufacturing towns the mothers had to work instead of attending to their children, whereas this inducement was wanting in the more rural parts, and it was more especially in the towns that the need for ensuring proper milk supplies existed. This might be done by arranging for properly superintended milk depôts, and

there the milk could be sterilized. He knew it might be urged that the establishment of milk depôts encouraged artificial feeding instead of the breast; but, anyhow, the present state of matters warranted the attempt to make artificial feeding as safe as possible, and whilst he knew there were many arguments against the use of sterilized milk entirely for feeding, still the sterilized product under proper supervision was a distinct advance on the present milk of commerce. He believed the death-rate amongst children fed from depôts in Liverpool, where this system had been tried, compared most favourably with that of the rest of the city. Recognizing that the injudicious feeding of infants produced lasting effects in after-life, might not much be done by regular and methodical distribution of leaflets, etc., to direct parents into the proper ways of bringing up their children? Not only was it necessary that medical men should instruct parents in the essential points concerning the food they should give, but more efforts should be made by the State to teach the masses how to prepare the food. Some slight attempt was, he thought, being made in this direction by training "domestic economy teachers," and establishing cookery classes, so that the future mothers might, it was to be hoped, bring more intelligence to bear upon these questions so vitally affecting the coming race.

It was not encouraging to them, as a nation, to see the birth-rate declining whilst the infant mortality still remained high; for although during the last thirty years there had been marked diminution in the general death-rate, no diminution had been discernible in the infants' death-roll, which showed pretty conclusively that the remedial measures which had helped to ameliorate the lives of ordinary citizens had entirely failed to benefit the case of the children in the first years of existence.

Passing to the teething age he said he was afraid that, as a body, they did not give sufficient attention to the condition of the teeth, and this, in a large measure, accounted for the appalling percentage of children who were defective in this respect, as reported throughout the country under the recent inspection of schools.

Parents should not be allowed to retain the erroneous idea that preservation of the milk teeth was unimportant; this often led to great pain and dyspeptic troubles. The necessity for periodical examination of the teeth from about 4 years upwards should be urged. The first teeth of the second set to appear were the four large double ones behind the first set, at any time between 5 and 8 years, and these were the most important teeth in the head, and should receive special attention. How often did they find these teeth hopelessly decayed, whereas a word of caution as to the necessity of keeping them clean and free from particles of food might probably have preserved them! He would like to see a portion of the time allotted to school hours utilized for the compulsory cleaning of teeth; they spent vast sums in developing the mind, but this without proper precaution to ensure healthy bodies would lead to only a poor return for the outlay.

Senses and memory were the first faculties parents should endeavour to develop by intelligent methods before school life commenced; and notions of right and wrong should be instilled, also the foundation of future virtues laid, by teaching kindness to animals and sympathy with the poor.

He thought children destined for boarding schools should be sent there early, between the ages of 8 and 10; many good qualities which were hidden at home developed, and rough edges of the character became smooth by contact with others. The shy and nervous child became the plucky leader in games, and the little bully under discipline became gentle.

Education should be directed to the preparation of children for their after-life, and they should be taught not only to know, but also to live. Therefore they should welcome the attempt to introduce hygiene into the school curriculum.

He thought in our primary schools children were sent too young. It would be much better if attendance at school were put off till the age of 7 (as was the case he believed in Switzerland) and the children allowed to run about the villages; in towns large play rooms and grounds should be provided to enable them to play and romp about instead of trying to learn lessons.

Periodical medical inspections should take place to

detect disease in its early stages. For instance, rheumatism was very common in childhood; the symptoms were insidious and varied, and were often ascribed to "growing pains." Many a case of heart disease in the adult was due to neglect of these early symptoms in childhood.

Again, how many cases of tubercle might be cut short if only detected and taken in hand early, and how many cases of this nature developed shortly after an attack of measles or whooping-cough! In connexion with this latter point he thought much might be done of prophylactic value by forbidding the attendance at school, for at least three months, after either of these complaints, which in his opinion should also be included in the list of the notifiable diseases. During the last decade he believed the mortality from measles had nearly doubled itself, and from whooping-cough there had been a dreadful increase. Let them contrast this with the mortality from scarlet fever since it had been notifiable.

Another point they should impress upon parents and future parents was the necessity for a periodical examination of the children's eyes. He did not refer to cases of actual disease, which (apart from refractive errors) could scarcely escape unnoticed, with the exception, perhaps, of "trachoma" or "granular ophthalmia," which, although dangerous to sight, and, he believed, contagious, was frequently overlooked, with disastrous consequences. How often children were permitted to go on suffering from headaches and pains in the eyes, often receiving punishment for inattention and carelessness, whilst all the time they were suffering from errors of refraction! Astigmatism and long sight were pretty sure to become manifest, but short sight of low degree might easily escape detection, and as this, if neglected, tended to increase, setting up sometimes actual disease resulting in blindness, it should be most carefully attended to.

It was a great pity that the medical curriculum did not include compulsory knowledge of sight testing. Were this the case they should not have any chemist, jeweller, spectacle seller, with mystical letters after his name, advertising himself as fully qualified to deal with such cases, with the baneful results which must often eventually follow.

"Another topic connected with infancy and school life was, he thought, worthy of more attention than it received: Our physical frame contains many dual organs, such as two brains, two eyes, two ears, limbs in pairs, etc. Why was it that so little effort was made to utilize both more equally? Did they not often hear a child reproved for using its left hand instead of the right? How many would be only too thankful if they were ambidextrous!

He once heard Mr. Adams Frost, in an introductory address at St. George's Hospital, dilate upon the advantages of ambidexterity for surgeons. Much might be done to make work easier in after-life, and to render them less helpless and dependent upon others when partially incapacitated by some accident or disease, if only pains were taken to develop for usefulness both sides of the body equally in childhood. He thought Gowers pointed out that aphasia would to a great extent be prevented if only ambidextrous teaching was generally adopted. Disease of a portion of the central convolution of the right side caused only transient interference with articulation; but if, in an ordinary adult, the corresponding portion of the left brain was affected, the power of word production at will was lost. The relation between speech and the left side of the brain was undoubtedly connected with right-handedness, and left-handed persons presented the same defects of speech in disease of the right hemisphere. Closely connected with this matter was "writer's cramp." What a boon it would be to a clerk to be able to use his left hand sometimes and thus relieve the strain on his right, at the same time giving the left brain a rest and so restore the balance! Moreover, what good results were obtained in developing brain power by hand training in the treatment of feeble-minded children.

In dealing with school life, the President first referred to sports and athletics. Speaking as an old athlete, he said they should encourage them in every way, especially cricket, football, and suchlike games; but he also thought they should warn parents and teachers against the overdoing of this most necessary part of school life. He

thought they would all agree in condemning the long-distance running for boys.

It would be a step in the right direction if a universal rule existed in private and so-called secondary schools similar to that contemplated in our public and elementary schools—namely, that every child on entrance should be carefully examined by the school doctor and advice given as to work, diet, and sports in each individual case (he might add by way of parenthesis that the doctor's fee for this work should form part of the school entrance fee). In this way many whose lives were now permanently injured inadvertently would receive special care and attention, so necessary at the period of their growth, and so blossom forth into healthy men and women. He was the last to advocate anything like "coddling," but he contended that, just as a child was examined in general knowledge on entering a school before being placed in a class, similar care should be exercised in regard to general health, bearing in mind that the best abode for a sound and healthy mind and conscience was a sound and healthy body.

As regards punishment, he did not think that as a rule it should be of such a nature as to keep children indoors after school hours: their health required all the fresh air possible, and it was not right that a child should be penned up in a room where numbers had been collected together for hours previously. He was a firm believer in the old saying, "Spare the rod and spoil the child"; but there again proper care and precaution were necessary. Of course, there were some children who should never be whipped.

He knew that in many schools it was stated that corporal punishment was inflicted by the principal only, but he also knew that the assistants were very prone on the slightest provocation to administer a smack on the ear, or a cut with a cane or ruler across the knuckles or palm of the hand, a practice which should be considered criminal. He had seen several cases of injury produced in this way, and in his own town he had on more than one occasion brought the matter to the notice of school managers, but without any lasting effect.

Having touched on various points connected with infancy and childhood which often escaped serious attention, it remained to indicate briefly some of the means by which matters might be improved.

First of all, let them try to bring home to the people more thoroughly the necessity for healthy marriages only, and the sacred duties devolving upon mothers towards their offspring.

Then institutions might be started, and many already in existence might be utilized for popular lectures and practical demonstrations by doctors, nurses, cooks, and others for the object of instructing the future parents in matters concerning health, food, clothing, ventilation, etc., for children.

Much might be done in training colleges to increase the opportunities for the study of child life instead of spending so much time over difficult problems, the main object of which was to increase the examination marks, and often render the future teacher incapable of sympathizing with a dull child or managing a refractory one.

By careful application of thought and intelligence to the phases of child study, and by teaching it in their homes and schools, they might look forward with hope to a period when healthier, happier, and wiser citizens would be sent forth to engage in the battle of life.

He concluded with the words uttered by the late Dr. O'Connor of Cork:

"To sympathize with the young is a duty, and should be a pleasure, of experienced age; to extend pity if they fall, to give encouragement if they struggle, and to honour them if they triumph."

Dr. MACPHERSON LAWRIE proposed and Dr. MACDONALD seconded, and it was carried unanimously:

That the best thanks of this meeting be given to the President for his able and comprehensive address.

Paper.—Dr. A. HUMPHREY DAVY read a paper on chronic gastric catarrh. The President, Dr. HYLIA GREVES, Dr. TELFORD SMITH, and Dr. JOHNSON SMITH spoke on this paper. Dr. HUMPHREY DAVY replied.

Cases.—Dr. RAMSAY related three cases of myomectomy during pregnancy, and exhibited a specimen of post-partum septic thrombosis in broad ligament. These

were commented on by Dr. MACPHERSON LAWRIE, Dr. SNOW, and Mr. BURROUGH COSENS. Dr. RAMSAY replied.

Demonstration in Words.—The honorary medical staff of the Dorset County Hospital showed some interesting cases in the wards of the hospital during the afternoon.

Votes of Thanks.—On the motion of Mr. J. A. HOSKER, seconded by the PRESIDENT, a cordial vote of thanks was awarded to the Vice-President and Mrs. Wm. Burrough Cosens for their kind hospitality in entertaining the members to afternoon tea at The Gables, Dorchester. It was proposed by the PRESIDENT, seconded by Dr. HAROLD SIMMONS, and carried unanimously:

That the best thanks of this meeting be conveyed to the Chairman and House Committee of the Dorset County Hospital for their kindness in allowing the Branch to hold its meeting in the board-room of the hospital.

Exhibit.—During the afternoon Messrs. Parke, Davis, and Co., of London, attended, and in a room adjoining that in which the Branch meeting was held exhibited a choice selection of recent pharmaceutical preparations and chemicals which were much appreciated by the members attending the meeting.

GLASGOW AND WEST OF SCOTLAND BRANCH:

DUMBERTONSHIRE AND ARGYLLSHIRE DIVISION.

The annual business meeting of this Division was held in Dr. Hunter's house, Millig, Helensburgh, on Friday, May 14th. Only four members were present.

Earlier Appointment of Representatives.—It was agreed to support this proposal. As the Representative of the Division is appointed nearly three months before the Representative Meeting no change in its procedure is necessary.

Representation of Local Medical Profession on Hospital Boards.—It was agreed that this was most essential, but the members thought that the action of the British Medical Association through its Branches and Divisions should be exercised only where there was any difficulty in obtaining the desired end. In Helensburgh the medical profession was satisfactorily represented on the committee of the local infirmary.

Whole-time Medical Officers of Health.—Agreed to support this proposal, but at the same time it was recognized that there were special areas which might call for special treatment on the lines now in force.

Medical Certification of Suitability of Patients for Hospital Treatment.—The members approved of the recommendation:

That a medical certificate of suitability for hospital treatment be required as a condition of hospital treatment except in case of casualties.

Contributions to Hospitals by Employers and Employees.—None of the members could support either of the motions dealing with these contributions and the handing over of same as suggested to any insurance society.

Fresh Public Medical Institutions.—It was agreed to support the motion:

That it is desirable that no fresh public medical institutions should be opened without previous consultation with the local medical profession through some organized body, such as the Division of the British Medical Association in the area of which it is proposed to establish such institutions, and that it be an instruction to the Council to give effect to this principle in considering applications from Divisions and Branches for support in dealing with hospital questions.

Symposiums for Workers Suffering from Tuberculosis.—The terms of the circular with report of the Joint Committee of the Representatives' Meeting dealing with this matter were unanimously approved of.

Secretary's Report.—The HONORARY SECRETARY reported that the membership at the beginning of the year had been 49. Three new members had been added, making a total of 52. Five names had been removed from the roll (3 by death, 1 by removal, and 1 by resignation), making the present membership 47, or a decrease of 2. The Secretary also stated that he had communicated with the various hospitals in the Division—namely, Oban, Dunoon, Dumbarton, Campbeltown, and Helensburgh—with reference to the certificates granted by the doctors to out-patients and the fees charged for same. Replies had been received from all the hospitals and had been sent to London. £3 15s. had been received from the Branch (1s. 6d. per member), and the

expenditure had amounted to £1 1s. 10d., leaving a balance of £2 13s. 2d., which had been returned to the Branch Treasurer.

Branch Council Work.—Dr. YOUNG reported on the work done at the Council meeting: (1) That the Ethical Committee, as now elected, included as far as possible representatives from the various Divisions. (2) Discussions had taken place with regard to the Referendum, and steps were being taken to try to secure a postal vote in this matter. (3) The payment of medical men when called upon to attend street accidents was discussed and was still under consideration. (4) The subject of the abuse of medical charities was before the Council and report on same was to be submitted to the Branch.

Election of Office-bearers.—The following were elected: *Chairman*, J. Ewing Hunter, M.B. (Millig, Helensburgh); *Vice-Chairman*, J. Wilson, L.F.P.S. (Ashville, Dumbarton); *Honorary Secretary*, Wm. Semple Young, M.D. (Craigie-lachie, Helensburgh); *Representatives to Branch Council*, Drs. Hunter and Young; *Representative to Annual Representative Meeting*, still under consideration.

LANCASHIRE AND CHESHIRE BRANCH:

LIVERPOOL AND BIRKENHEAD COMBINED DIVISIONS.

A MEETING of these Divisions was held at the Liverpool Medical Institution on May 14th, Sir JAMES BARR in the chair. Thirty-one other members were present.

Salary of Police Surgeons.—The SECRETARY reported what the Joint Committee had done in relation to the salary of police surgeons.

Hospital Abuse.—Dr. PARKINSON, on behalf of the Subcommittee on Hospital Abuse, reported the action of the Committee up to date, including the following resolution, which had been moved by Dr. TISDALL, seconded by Dr. DAVIES, and carried *nem. con.*, namely:

Your Committee disapprove of the practice which obtains at the majority of the charity hospitals within the Liverpool and Birkenhead areas—namely, using a certain part of their all-too limited accommodation as private wards for the reception of paying patients—because it is both wrong in principle and unjust in practice, and recommends their abolition. Wrong in principle, because under no condition should an institution maintained by funds subscribed by the public for charitable purposes embark on any kind of commercial enterprise. Unjust in practice, because the usual medical attendant is wrongfully deprived of fees to which he is entitled, and also because a public charity enters into direct competition with nurses and others who own nursing homes throughout the city. The fact of the members of any particular hospital staff being permitted to charge a fee for attendance on patients treated in such private wards does not, in the opinion of your Committee, in any way strengthen the position of those who advocate their continuance. If it be contended that the existing nursing homes are not adequate to meet the existing conditions, either as to accommodation or fees, your Committee has faith in those economic laws which in all other walks of life regulate the matter of demand and supply.

This resolution had been transmitted by order of the committee to the Association of Honorary Medical Officers to the Liverpool Medical Charities, with a view of obtaining their co-operation and united action. The following letter had been received in reply from their honorary secretary, Dr. Bushby, namely:

43, Catherine Street, Liverpool,
May 13th, 1909.

Dear Dr. Grossmann,

At a meeting of the Association of Honorary Medical Officers to the Liverpool Medical Charities, held on April 23th, 1909, the resolutions forwarded to me by the Joint Committee of the Liverpool and Birkenhead Divisions of the British Medical Association were discussed.

By a majority of nine votes to seven the following resolution was passed:

That the Association of Honorary Medical Officers to the Liverpool Medical Charities approves of the resolution passed by the Joint Committee of the Liverpool and Birkenhead Divisions of the British Medical Association, and agrees with the opinion therein expressed.

I am, yours faithfully,

T. BUSHBY.

Whereupon Mr. LARKIN moved and Dr. STOKES seconded, and it was resolved:

That the report of the Hospital Abuse Subcommittee be adopted and the resolution be approved, and the Committee be requested to continue its action.

Proposed Increased Representation on General Medical Council.—The SECRETARY reported that, in accordance with the suggestion of the Medico Political Committee, he had written to Dr. Caton, the Representative of the Liverpool University on the General Medical Council, urging him to support the increase of direct representation for England and Wales, and that he had received a sympathetic reply.

Matters Referred to Divisions.—The following matters referred to Divisions, as printed in the SUPPLEMENTS to the BRITISH MEDICAL JOURNAL of January 23rd, February 27th, April 10th, and April 24th, were then considered:—SUPPLEMENT of January 23rd: Report of the Public Health Committee:

Agreed: That medical officers of health should be debarred from engaging in private practice.

SUPPLEMENT of February 27th: Hospitals Committee's report on medical certification of suitability of patients for hospital treatment:

Recommendation approved.

Report on contributions to hospitals by employers of labour and employees: Memorandum:

The Divisions agreed unanimously that the principle enunciated in Section 2 is sound.

The proposal dealt with in Section 3 was disagreed with, the Divisions considering that all contributions to hospitals must be looked upon as purely charitable.

Section 4: The Divisions consider that it would be highly detrimental to the profession for insurance companies to be allowed to enter the field of hospital management. The Divisions unanimously agree with the previous declaration of the Association.

SUPPLEMENT of April 10th: Hospitals Committee: Representation of local medical profession on boards of hospitals and similar bodies:

The Divisions agreed with the principles laid down in the memorandum:

SUPPLEMENT of April 24th: Notices of motion:

A.—Approved.

B.—Approved.

C.—Method of distribution of capitation grants (Wandsworth Division): Disagreed with.

Re BRITISH MEDICAL JOURNAL (Waterford Division):

No action taken.

Re Materia Medica Committee (Waterford Division):

The Divisions are of opinion that such matters can well be left to the Council.

Re scientific work of the Association (Wandsworth Division):

Unnecessary.

The meeting then closed.

ST. HELENS DIVISION.

ON Wednesday, February 17th, at 8.45 p.m., a meeting of the Division was held in the Fleece Hotel, St. Helens. Present: Drs. Bassett, Fox, Dowling, Wilson, Paterson, and Buchan. It was resolved that Dr. Bassett take the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and adopted.

Report of Executive Committee.—The report of the Executive Committee was submitted.

Draft Ethical Rules.—Draft ethical rules of the Association and the Bradford Division were adopted, and the Executive Committee was instructed to draw out a list of fees for submission to a future meeting of the Division, to be incorporated in the rules.

MATTERS REFERRED TO DIVISIONS.

Medical Certificates of Suitability for Hospital Treatment.—The Division discussed the question of the granting of certificates at hospitals, and instructions were given to the Secretary in reply to the questions put by the Organization Committee.

Draft Charter.—This was considered, but no instructions were given to the Representative thereon.

Whole-time Medical Officers of Health.—The Division considered, in reply to the Organization Committee, that medical officers of health should always, when practicable, devote their whole time to the duties, but that present appointments should not be disturbed.

Grouping of Divisions.—The Division considered the junction of the Division with the Warrington Division the

most convenient for the election of a Representative to the Representative Meeting.

Circular from Warrington Division.—A circular from the Warrington Division, with respect to the payment of medical practitioners in cases of midwifery, was submitted for the information of members.

Annual Report.—The report for the year 1908 was submitted and approved. This was all the business.

A meeting was held in the Fleece Hotel, St. Helens, on Wednesday, May 19th, at 8.45 p.m. Present: Drs. Bassett, Dowling, Fox, Kerr, Orton, Paterson, Reid, Wilson, and Buchan. It was resolved that Dr. Reid take the chair.

Resignation of Chairman.—An apology for absence was intimated from Dr. Mouncey, who at the same time desired to resign the chairmanship of the Division. Resolved that Dr. Mouncey's resignation be accepted with regret.

Election of Officers.—The following office-bearers were elected for the year 1909-10: *Chairman*, J. Reid, M.B.; *Vice-Chairman*, F. P. Bassett; *Honorary Secretary and Treasurer*, John J. Buchan, M.D., Holly Mount, Laurel Road, St. Helens; *Representative on the Branch Council*, Dr. F. P. Bassett; *Executive Committee*, The Office-bearers, with Drs. Dowling, Kerr, Knowles, Orton, and Mouncey.

Medical Officer for Recruiting Purposes.—A letter was read from the Medical Secretary regarding the appointment of medical officer for recruiting purposes at St. Helens. The Division considered the matter very carefully, and directed the Secretary to reply.

Medical Inspection of School Children.—The Division proceeded to consider the report of the Medico-Political Committee on this subject, and resolved that if any school clinic be begun in this district, it was essential that the medical profession be represented on the committee of management, so that the interests of the profession be adequately safeguarded.

Central Council Election.—It was resolved:

That members of the Division be urged to vote for Messrs. Garstang, Larkin, Macfie, and Taylor.

METROPOLITAN COUNTIES BRANCH:

STRATFORD DIVISION.

A MEETING of this Division was held in the Alexandra Hotel, High Street, Stratford, E., on Thursday, May 20th, at 9 p.m., Dr. Percy Rose presiding.

Confirmation of Minutes.—The minutes of the previous meeting were read and approved.

Whole-time Medical Officers.—The following resolution was passed:

That the proposition that medical officers of health should be debarred from engaging in private practice is desirable where the size of the district permits sufficient salary.

Representation of the Profession on Hospital Boards.—The following resolution was adopted:

That the Representative at the Annual Representative Meeting have a free hand in the discussion of representation of the local medical profession on boards of hospitals.

Paper.—Dr. COMYNS BERKELEY read a most interesting and instructive paper on Treatment of Cancer of the Cervix Uteri, showing a large number of specimens.

Vote of Thanks.—After some discussion, during which a number of questions were asked and replied to, Dr. COMYNS BERKELEY was awarded a very hearty vote of thanks.

The proceedings then terminated.

SOUTH-EASTERN BRANCH:

REIGATE DIVISION.

THE annual meeting of this Division was held on Thursday, May 6th, at 4.30 p.m., at the Reigate and Redhill Hospital. Tea was kindly provided by the Matron. There were present Dr. WALTERS (in the chair), Drs. Home Ross, Fisher, Pickett, A. R. Walters, Hewetson, Newton, Porter, Berridge, Caldecott, Watson, Ogle, and Mr. Sewill.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Election of Officers.—The following officers were elected for the ensuing year: *Chairman*, Mr. Berridge; *Vice-*

Chairman, Dr. Rawlings; Representative on South-Eastern Branch Council, Dr. Caldecott; Representative at Annual Meeting, Mr. Sewill; Committee, Drs. Blackler, Bromet, Prince, Porter, and A. R. Walters; Honorary Secretary and Treasurer, Dr. John G. Ogle.

Earlier Election of Representative.—It was proposed by Dr. WALTERS and seconded by Dr. OGLE that in Rule 7 nine months be substituted for three months as the interval before the annual meeting during which a Representative may be elected by the Division. This was carried unanimously.

Proposed Division of South-Eastern Branch.—The following proposal of the Brighton Division was read and discussed:

That the South-Eastern Branch be divided into two smaller Branches, one to consist of that part of Kent which is already in the South-Eastern Branch, and the other of the county of Sussex and so much of the county of Surrey as is already part of the Branch.

Mr. BERRIDGE proposed and Mr. SEWILL seconded that the South-Eastern Branch be not divided as suggested. This was carried—11 for, 1 against.

Whole-time Medical Officers of Health.—The question of the desirability of health officers being required to give their whole time to the work was discussed. Dr. OGLE proposed and Mr. BERRIDGE seconded:

That medical officers of health should be debarred from engaging in private practice where possible.

This was carried unanimously.

Medical Certification of Suitability of Patients for Hospital Treatment.—In regard to this matter, it was proposed from the chair:

That a medical certificate of suitability for hospital treatment be required as a condition of hospital treatment, except in case of casualties.

This was carried unanimously, 12 voting.

Contributions to Hospitals by Employers and Employees.—It was proposed by Dr. OGLE:

That this Division disapproves of the principle that the contributions in question should be considered in the light of premiums for insurance against liability for attendance in sickness and accidents, and strongly disapproves of the suggestion that such contributions should be paid over to insurance companies, who in their turn would recompense hospitals, hospital staffs, etc., for attendances in illness or accidents.

This was seconded by Dr. WATSON and carried unanimously, 12 voting.

Fresh Public Medical Institutions.—Mr. SEWILL proposed and Mr. BERRIDGE seconded the following resolution:

That it is desirable that no fresh public medical institution should be opened without previous consultation with the local medical profession through some organized body, such as the Division of the British Medical Association in the area of which it is proposed to establish such new institution, and that it be an instruction to the Council to give effect to this principle in considering applications from Divisions or Branches for support in dealing with hospital questions.

This was carried, 6 voting for and 5 against.

Sanatoriums for Workers.—A statement on the relations between the National Association for the Establishment and Maintenance of Sanatoriums for Workers suffering from Tuberculosis and the medical profession, with special reference to the payment or otherwise of medical referees, was discussed, and Dr. PICKETT proposed:

That the statement be laid on the table.

This was seconded by Dr. OGLE, and carried unanimously, 11 voting.

Trade in Quack Medicines.—Mr. SEWILL proposed the following resolution:

The Reigate Division would urge upon the Council the necessity of including the traffic in quack medicines and apparatus within the scope of the proposed Royal Commission; and in view of the fact that this fraudulent and cruel trade is carried on mainly by means of advertisements, the Division would further urge upon the Council the necessity of bringing the facts, at once, forcibly before newspaper proprietors.

This was seconded by Dr. HOWE ROSS, and carried unanimously. Dr. OGLE proposed:

That Mr. Sewill's resolution and a summary of the speech with which he introduced it be printed and sent to the members of the Division, the honorary secretaries of Divisions in the South-Eastern Branch, and to other members who have taken an interest in the subject.

This was seconded by Mr. BERRIDGE and carried unanimously:

Vote of Thanks to Retiring Chairman.—A vote of thanks to Dr. Walters, the retiring chairman, was carried by acclamation.

SOUTH-EASTERN OF IRELAND BRANCH.

The annual meeting of this Branch was held at the Victoria Hotel, Kilkenny, at 5.30 p.m. on May 5th, Dr. GEORGE J. MACKESY in the chair. Other members were present to the number of nine.

Apologies for Non-attendance.—Apologies were received from Drs. WYNNE, George Russell, Mary Strangman, Power, and Riordan.

Installation of President.—Dr. W. H. JELLET took the second chair as new president, all other officers remaining the same as last year.

Contributions to Branch Dinners.—This subject, arising out of Dr. Laffan's motion, was very freely discussed, and correspondence from the five absentees already mentioned expressing their views on the matter having been read, the further consideration of the motion was postponed to the next meeting.

Notices of Motion.—Dr. WALSH and Dr. LAFFAN gave notices of motion for next meeting.

Representation of Local Profession on Hospital Boards.—This matter was discussed and it was found that the motion did not apply to the Division.

Dinner.—After the meeting the members dined together.

SOUTH MIDLAND BRANCH:

NORTHAMPTONSHIRE DIVISION.

A CLINICAL meeting of this Division was held in the Out-patient Room of the Northampton General Hospital on May 4th, after luncheon at Franklin's Restaurant. Mr. C. J. EVANS was in the chair. There were also present Drs. HARRIS-JONES, Darley, Baxter, Robson, Grindon, Linnell, Terry, Beatty, Wagstaff, Stone, Godwin, Milligan, Percival, and Hichens.

Cases.—The following cases were shown:—Mr. HARRIS-JONES: Detached retina; active choroiditis causing detached retina; lymphoma of conjunctiva. Mr. PERCIVAL: Malignant disease of pylorus relieved by a posterior gastro-jejunostomy; injury to scrotum and perineum; ovariectomy successfully operated on; case of pelvic peritonitis. Dr. MILLIGAN: Fracture of tibia and fibula sutured with Lane's plates, with an x-ray photograph. Mr. ONGERS: Perineal hypospadias. Dr. ROBSON: Pulmonary stenosis of tricuspid regurgitation; *Bilharzia haematobia* from the urine. Dr. HICHENS: An achondroplastic dwarf with an oesophageal pouch; a case of pulmonary abscess or bronchiectasis; a case of pernicious anaemia with ataxy from a mixed sclerosis; a case of spleno-myelogenous leucocythaemia, with blood specimens; an obscure case of tumour in the region of the pylorus; a peculiar case of fungating tumours on the hands caught from attending on lambs with ulcerations about the mouth.

SOUTH WALES AND MONMOUTHSHIRE BRANCH.

SWANSEA DIVISION.

A MEETING of this Division was held at the Swansea Hospital on April 30th, Dr. A. HANSON in the chair.

Whole-time Medical Officers of Health.—The report on the desirability of health officers being required to give their whole time to the work was considered, and the following resolution was unanimously carried:

That this Division approves the principle of medical officers of health being debarred from engaging in private practice.

That in order to secure the above principle there should be a combination of small areas where necessary, there should be security of tenure of office with adequate remuneration and provision for pension or superannuation, and the interests of existing officials should be recognized or compensated for.

Medical Certificates of Suitability for Hospital Treatment.—The report on medical certification of suitability of patients for hospital treatment was considered, and for the instruction of the Representative it was unanimously resolved:

That this Division considers that a medical certificate of suitability for hospital treatment should be required as a condition of hospital treatment, except in cases of casualties.

Contributions to Hospitals by Employers and Employees.—The report on contributions to hospitals by employers of labour and employees was considered. The negative proposal in motion (a):

That such contributions should not be considered as entitling the contributors to unlimited hospital as also to gratuitous medical treatment,

was unanimously approved. The positive proposal in motion (a):

That the contributions in question should be considered as payment of premiums for a proportionate insurance against liability for hospital and medical attendance in cases of serious illness and accident which are made on behalf of those unable themselves to pay directly or adequately for the same,

was unanimously disapproved. Motion (b):

That a scheme whereby a contribution should be paid to insurance companies, who in their turn will proportionately recompense hospital boards, hospital staffs, general practitioners, etc., for all attendance given,

was unanimously disapproved.

Fresh Medical Institutions.—The motion forwarded by the Central Council on fresh public medical institutions was considered—namely: "That it is desirable that no fresh public medical institutions should be opened without previous consultation with the local medical profession," etc., and the following resolution was unanimously carried:

That this Division approves of the above motion.

Representation of Local Profession on Hospital Boards.—The question of the representation of the local medical profession on boards of hospitals and similar bodies, as set forth in the motions of the Hampstead and Wandsworth Divisions published in the SUPPLEMENT of the BRITISH MEDICAL JOURNAL of April 10th, 1909, was considered, and it was decided to instruct the Representative to vote in favour of the motions at the next Representative Meeting.

STIRLING BRANCH.

The annual meeting was held, by the kind invitation of Lieutenant-Colonel F. G. Greig, R.A.M.C.(ret.), in the Military Hospital, Stirling, on Thursday, May 13th, at 3 p.m. Thirty members and visitors were present. The VICE-PRESIDENT, Dr. Mitchell, occupied the chair in the absence of the President, who arrived at a late stage.

Apology for Non-attendance.—An apology for inability to attend was received from Dr. C. J. Lewis, Birmingham.

Election of Office-bearers.—The following gentlemen were elected for the ensuing year: President, Dugald Mitchell, M.D., Camelon; Vice-President, J. Ernest Moorhouse, M.D., Stirling; Representative, George Gardner, M.D., Falkirk; Secretary, G. S. Steward, M.B., Falkirk; Council, Drs. Greig, Hunter, Sloan, and Robertson.

Report of Council.—The Council reported that two meetings of the Branch were held during 1908. The average attendance was 11. Membership of the Branch, 66. The balance of the funds at the end of 1907 was £29 11s. 7d.; at the end of 1908, £38 9s. 1d.

Nomination of Member of the Central Council.—Dr. A. Trotter, Tayview House, Perth, was nominated.

Address.—Mr. James R. Nicoll, Glasgow, gave an address on Gastro-enterostomy: its place in practice. The lecturer discussed with great acumen and sound common sense the conditions which justified a gastro-enterostomy, and pointed out fully the cases in which the benefits to be derived from the operation were doubtful or non-existent. He emphasized the fact that on the physician and general practitioner rested the responsibility of selecting suitable cases for surgical treatment, as his personal knowledge of the case and history of the patient was naturally greater than the surgeon's. The lecture was of an extremely interesting and illuminating character, and at the end a discussion took place in which Drs. GRIFFITHS, MOORHOUSE, and MITCHELL took part. On the motion of the PRESIDENT, Dr. Robertson, the lecturer, was awarded a hearty vote of thanks.

Visit to the Hospital and Castle.—The members and visitors were afterwards shown over the hospital, and were entertained to afternoon tea, in the officers' mess at the Castle, as the guests of Major A. F. Mackenzie, M.V.O., Argyll and Sutherland Highlanders, Commandant,

Stirling Castle; and Lieutenant-Colonel Greig, officer in medical charge; and everything of interest in the Castle was shown to those who had time to go over it.

Votes of Thanks.—On the motion of Dr. ROBERTSON, Major Mackenzie and Lieutenant-Colonel Greig were cordially thanked for their kindness and hospitality. Major Mackenzie, in replying, expressed the pleasure he had received from meeting the members of the Branch, and stated that he always had a great interest in medical matters, and had many friends in the R.A.M.C.

CLSTER BRANCH.

The spring meeting of this Branch was held in the Harbour Office, Londonderry, on Saturday, May 8th, the PRESIDENT (Dr. Alex. Dempsey) in the chair.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Report of Council.—The report of Council was read by the HONORARY SECRETARY (Dr. Cecil Shaw). It stated that four members had been elected: Dr. Wm. Boyd (Banbridge), Dr. J. A. Boyd (Carmoney), Dr. G. Moncrieff Melville (Lisburn), and Dr. Wiclif McCready (Belfast).

Apologies for Non-attendance.—Apologies were received from Dr. Warnock (Donegal), Dr. Thompson (Omagh), Dr. Nolan (Downpatrick), Dr. Hamilton (Faughan), Dr. Rankin (Newtowncunningham), Professor Lindsay, Dr. Campbell, and Mr. A. B. Mitchell (Belfast).

Luncheon.—After the meeting the members present were entertained at luncheon in the Northern Counties Hotel by the President. There were twenty-two present. After luncheon the President's health was proposed by Dr. THOS. McLAGHLEN (Londonderry).

Heart Strain from Physical Effort.—Dr. CALWELL read notes on cases of heart strain from physical effort. He pointed out that physical effort might take the form of the strenuous life, which was literally and metaphorically living at high pressure; or of over-exertion in bouts of various athletic exercises, as rowing, Marathon races, scorching; or of a sudden desperate effort, as trying to prevent a fall from a height, or in a struggle with a madman. Secondly, he said, we should consider whether the patient was healthy and in training, or was soft, untrained, but without organic lesion; and, thirdly, whether the patient might already have valvular or muscular trouble of the heart. A sudden effort was more likely to affect the left ventricle and arterial system; a prolonged exertion the right ventricle and venous system. From these considerations a continuous series was evident between failing compensation in valvular disease due to slight physical labour, and the acute dilatation, perhaps with rupture of a valve, in some tremendous spurt or struggle in a healthy adolescent. The symptoms and signs of failing compensation in valvular disease were well known, and simply required mention to render the paper symmetrical. Dr. Calwell then read a synopsis of notes illustrating cardiac strain in those who had not actual disease of the heart, but were not in training, or were suffering from influenza, excessive cigarette smoking, alcoholism, obesity, chlorosis, and analogous affections. The chief of these was probably influenza; the symptoms in the slighter cases were quickened action, incomplete systole, intermittence; and in the more severe and serious cases were dilatation, with the deep cardiac dullness extending 1 or 2 in. to right of sternum, and beyond the nipple line in the fourth space, sometimes with actual pulsation to left of sternum. These cases were hopeful in the slighter forms in the young if the patient was sensible; but in the severer forms the heart never seemed to regain its pristine condition, and sudden death, even while at ease, occasionally took place. In the trained these results were much rarer, but exercise on a full stomach, as in fast walking after a heavy meal, was very trying to any heart. As an example of a sudden desperate effort, the case of a healthy young adult who had been passed as a first-class life a fortnight before, and who fell from a scaffolding, and was subsequently discovered with a loud, unmistakable double aortic murmur, was related; of course the chest may have been struck or crushed in the fall. Some notes were then given as bearing upon compensation for injuries, and it was pointed out that because a heart had already valvular disease, it was

all the more liable to be further injured by strain' Finally the notes were read of a military officer who indulged in severe polo playing while untrained, after a long spell of office work, and in whom, in addition to a systolic murmur heard over the heart, there appeared to be a paresis of the arterial system, the arteries on exertion or excitement dilating and throbbing so that the vessels were visible and palpable. Dr. Calwell's paper was discussed by Dr. THOS. McLAUGHLIN (Derry), Dr. DARLING (Lurgan), and the PRESIDENT.

Ringworm.—Dr. CALWELL also showed stained microscopic specimens of some of the varieties of ringworm and some cultures on Sabouraud's medium of ringworm and of favus.

Serumtherapy of Cerebro-spinal Meningitis.—Dr. GARDNER ROBB read notes of 100 consecutive cases of cerebro-spinal fever treated with Flexner's and Jobling's serum. In the previous cases treated in the Purdysburn Fever Hospital, Belfast, the mortality was 72 per cent. among the 275 cases, which was a case mortality agreeing with that observed in epidemics in other places. Since the introduction of the serum, which had been supplied by Dr. Flexner as required, there had been 106 cases, and the mortality among these had been 29.8 per cent. Dr. Robb did not think that this great fall in the mortality could be explained by the occurrence of a milder type of disease late in the epidemic, for during part of the time that the serum treatment had been used in the hospital a record had been kept of the numerous cases treated in the patients' own homes, and it had been discovered that among them the mortality remained very much what it was at first. Dr. DARLING (Lurgan) gave his experience of some 16 to 20 cases treated in the Lurgan Infirmary, and the paper was also discussed by Drs. CUNNINGHAM and McCURDY (Derry) and the PRESIDENT.

Contusions of Eyeball.—Dr. J. W. KILLEN (Derry) read notes on three cases of contusion of the eyeball in all of which mydriasis was present. The lens was dislocated in two of the cases, in one of which it had to be removed to relieve irritation. In the third case the choroid was ruptured, causing considerable diminution of vision.

Lateral Sinus Thrombosis.—Dr. KILLEN also read notes on a case of lateral sinus thrombosis arising from chronic middle-ear disease, in which after the sinus was exposed and opened pus could be squeezed out through it from the internal jugular vein. The jugular vein was not tied, but the patient ultimately made a good recovery. The communications were discussed by Drs. CECIL SHAW, HUNTER (Derry), and I. DAVIDSON. Mr. H. H. B. CUNNINGHAM read a short paper on an unusual case of facial paralysis. Dr. W. B. HUNTER (Derry) showed a case of densenulecoma of the cornea treated with fibrolysin. The case was discussed by Drs. CECIL SHAW, H. CUNNINGHAM, KILLEN (Derry), and DAVIDSON. Dr. J. GALWEY COOKE showed a case of pityriasis rubra of two months' duration in a child aged 10 years. At the onset the case was thought to be scarlatina. The temperature was of an irregular type; no chest complications. A case of keratosis palmaris et plantaris—congenital. The patient was a girl of 22. A remarkable feature of the case was constriction of the soft tissues of some of the fingers which appeared to threaten spontaneous amputation. Dr. COOKE also read (1) a note of 3 cases of abdominal section in infants, aged 5 months each, for acute obstruction of the bowels, and pointed out the necessity for early diagnosis if successful operative measures were to be undertaken; (2) a note on two cases of Meckel's diverticulum met with on opening the abdomen, one where the diverticulum existed in a case of appendicular abscess with gangrenous appendix. In this case the diverticulum was not removed, as its removal involved a risk of faecal fistula, owing to the inflamed condition of the bowel. In the other case the diverticulum was the cause of acute obstruction through its extremity becoming adherent to mesentery. It was tied off and removed, the stump being inverted into the bowel. The bowel was marked by a sulcus owing to the tightness of the constriction. The patient made a good recovery. The cases were discussed by Professor SYMINGTON, and Drs. FULLERTON, R. J. JOHNSTONE, and WM. CALWELL. Mr. FULLERTON showed a large prostate weighing 17½ oz., and read notes on the case. (The paper appeared in the JOURNAL of May 22nd.) Dr. DARLING (Lurgan) showed a large concretion from an intestine.

GENERAL COUNCIL

OF

MEDICAL EDUCATION AND REGISTRATION.

SUMMER SESSION, 1909.

Tuesday, May 25th.

Sir DONALD MACALISTER, K.C.B., President, in the Chair. The eighty-ninth session of the General Council of Medical Education and Registration was commenced at the offices of the Council, 299, Oxford Street, on Tuesday, May 25th, at 2 p.m.

NEW MEMBERS.

Dr. NORMAN MOORE introduced Dr. Frederick Taylor as representative of the University of London for one year from February 24th, 1909. Dr. NORMAN WALAER introduced Dr. David Neilson Knox as representative of the Faculty of Physicians and Surgeons of Glasgow from May 3rd, 1909, to April 6th, 1911.

PRESIDENT'S ADDRESS.

The PRESIDENT then delivered the following address:

Deaths and Resignations.

GENTLEMEN.—Since the date of our Jubilee session in November last, the Council has lost the services of three members, each of whom in his own way made contributions of value to our common work. Dr. Lindsay Steven, cut off in his prime, was esteemed throughout the West of Scotland as an accomplished physician, an able teacher, and a philanthropist who freely gave of his best for the good of others. His character gave weight to the opinions he had formed on the subject of medical education; the evident thoughtfulness and sobriety of his advocacy caused them to be received with respect. As representing the Council, I attended his funeral in Glasgow, and witnessed the striking tribute to his memory which was offered by the concurrence of colleagues and friends who followed it as mourners.

Regrettable failures of health have led to the retirement of Dr. Pye-Smith and of Professor Young, who have been influential in our councils during the last ten years. Dr. Pye-Smith brought to our aid a penetrating and highly-cultivated intelligence, a profound knowledge of medicine and its ancillary sciences, and a concise and incisive manner of address. These rendered his advice helpful and his criticism effective. He never took part in discussion without illuminating some aspect of the subject in hand and pointing the way to a right decision. In administration as well as in debate he bore his part to our advantage, for during six years, when our finances gave occasion for some anxiety, he acted as one of our Treasurers, and assisted in restoring our affairs to a more prosperous condition. Professor Young, first as representative of the federal Victoria University, and afterwards of the Victoria University of Manchester, was one of the numerous body of anatomists who have done and are doing good service to the Council. His strong common sense, his alert understanding, and his reticent temper, were characteristic of the northern schools in which he was trained, and on which he reflected honour by his scientific achievements. In the work of our committees, and of our judicial sessions, we shall often miss his quiet but efficient co-operation. To both of these colleagues, who are now called upon to cease from active exertion, the Council will wish increase of strength and comfort in the enjoyment of their well-earned rest.

The late Mr. Wheelhouse.

Though it is now twelve years since Mr. Wheelhouse withdrew from office as a representative, he continued to be connected with the English Branch Council as one of its trustees. His death at a good old age, in happy and honoured retirement, recalls to those who were privileged to be associated with him his ten years' tenure as one of the first directly-elected members of the Council. By his kindly nature, his great experience, and his practical wisdom, he commended the principles for which he stood to his colleagues of the older régime, with the result that the changes involved in the Medical Act of 1886 came into operation with little difficulty and no friction.

New Members.

The University of London has sent us a distinguished member of its Senate in the place of Dr. Pye-Smith, and the Faculty of Glasgow its visitor in the place of Dr. Lindsay Steven. To Dr. Frederick Taylor and Dr. David Knox we offer the welcome which is due to their personal merits and services, no less than to their professional eminence. We may count with confidence on receiving from both the benefit of their special knowledge and experience.

Unqualified Practice.

In accordance with my duty as President, it has fallen to me to make representations to the Government, through the Lord President of the Privy Council, on various matters regarding which resolutions were passed in November. The Council requested that steps should be taken for the appointment of a Royal Commission to inquire into the evil effects produced by the unrestricted practice of medicine and surgery by unqualified persons. The Lord President has decided to make preliminary inquiries on the subject through the Local Government Board. A circular has accordingly been issued to medical officers of health, asking for information concerning the extent of the practice complained of, and its effects on the general health, within their several districts. When the replies are received the Lord President will be in a position to determine what further steps are desirable in the interests of the public.

From the Colonial Office the Executive Committee has received a copy of an Act of the General Assembly of New Zealand, entitled the Quackery Prevention Act, 1908. This Act is directed against obnoxious forms of irregular practice, and imposes heavy penalties for these offences. The Executive Committee has replied that it would welcome similar legislation applicable to other parts of the British Empire.

Tuberculosis (Ireland) Bill.

In the Tuberculosis (Ireland) Bill, as originally presented to Parliament, the duty of advising the Irish Local Government Board with reference to the application of the proposed law was assigned to the Irish Branch Council; but no provision was made for meeting the expenses the Branch Council must thereby incur. On discussing the question with the authorities, it appeared that no grant from public funds was likely to be made for the purpose. The situation was dealt with by transferring the duty in question to the Presidents of the Royal Colleges of Physicians and Surgeons in Ireland, and with this change the bill has passed into law.

Registration of Nurses.

By the bill for the Registration of Nurses, concerning which a communication was received from the Privy Council on November 15th, it was proposed to establish a General Nursing Council for the United Kingdom, of which one member out of sixteen was to be appointed by the General Medical Council. The Nursing Council was to frame rules *inter alia* "regulating, supervising, and restricting within due limits the practice of registered nurses." It was represented by you to be expedient that the Medical Council should stand in the same relation to the body concerned with nurses as it does to the Central Midwives Board. At the Privy Council Office note was taken of your views; and I have ground for believing that, should the bill be proceeded with during the present session, it will be proposed to amend it in the sense you indicated, the Executive Committee being entrusted with the function which under the English Midwives Act is committed to the English Branch Council. Should this arrangement be sanctioned by law, the expense falling on the Council would be trifling, as the matters passing under the review of the Executive Committee could be dealt with at its ordinary meetings. I was unable in this instance also to obtain any assurance that a subsidy from public moneys would be granted to the Council in respect of this public service. As, however, other proposals dealing with the registration of nurses are under consideration, and as opinion appears still to be divided on the general question, it is probable that legislation on the subject will be deferred.

Anaesthetics.

By your direction I communicated the Council's resolution of November 28th respecting the General Anaesthetics

Bill, 1908, to the Government Departments concerned. The resolution supported the proposal to restrict to qualified medical practitioners the administration of drugs with the object of producing unconsciousness during medical, surgical, or obstetrical operations. In the present session of Parliament another bill having a similar purpose has been introduced. Both bills propose that dentists registered after a certain date shall not be entitled to administer general anaesthetics unless they possess a medical qualification. On this particular proposal the Council did not pronounce an explicit opinion, though its resolution on the general principle involved might be held to indicate its views with sufficient clearness. Now, however, we are asked in various quarters to express an opinion on the point, and in particular to give an answer to a question bearing upon it, which is submitted on behalf of the Lord President. The Council will therefore be called on to consider whether, apart from the saving to existing dentists of their customary practice hitherto, it is expedient in the public interest to confer in future on dentists who have no medical qualification, express legal authority to administer general anaesthetics to persons requiring dental operations. When it is kept in mind, first, that unless skilled attention is given to the state of the patient's bodily health no general anaesthetic is invariably "safe," and, secondly, that in dental practice the anaesthetist is often the operator also, it will be seen that the proposal contained in the bills referred to is not without some justification in the interest of the public protection.

The Registrar has received replies from the licensing bodies to his inquiry as to the degree in which effect has been given to the Council's recommendation—namely, that candidates for medical qualifications should be required to produce evidence of having received practical instruction in the administration of anaesthetics. Nearly all the licensing bodies have answered that this requirement is already or will in future be enforced. The Council is thus justified in its contention that fresh legislation to this end—which, to be effective, must be penal in character—is neither expedient nor necessary at the present time.

Penal Procedure.

With the assistance of the Legal Adviser, I have drawn up a memorandum on the penal procedure of the Council, showing the nature of the actions which have been held by the Council to constitute infamous conduct in a professional respect. This memorandum has been forwarded, at his Lordship's own request, to the Secretary of State for the Colonies, and communicated by him to the Boards of Inquiry constituted by the medical enactments of the several Crown Colonies. It is to be hoped that the information conveyed will be useful in promoting uniformity of judicial action in professional matters within the Colonies concerned.

Penal Cases for Consideration.

The penal cases to be considered during this session are not numerous, though some of them are grave. They include one in which it will be necessary to inquire into a charge of "covering" an unqualified assistant. That such charges have now become rare testifies to the efficiency of the action taken by the Council some years ago, and to the praiseworthy ambition of the profession to dissociate itself entirely from a practice which experience had shown to be liable to grave abuse. A few charges against dentists have come before the Dental Committee, who will report to the Council on the facts of each case. The energies of the British Dental Association are actively engaged both in challenging what it deems to be reprehensible conduct on the part of registered practitioners of dentistry and in applying with marked success a recent interpretation of the Dentists Act to the suppression of unwarranted pretensions to professional skill put forward by unqualified persons. A judgement, however, delivered in the Court of Appeal last week appears to limit the application of that interpretation. I have asked our legal advisers to state, for the information of the Council, the precise nature and extent of the limitation.

Dental Practice by Companies.

I am informed that at the instance of the Association an injunction for the restraint of dental practice by a company of unqualified persons has been granted by the High Court in England. This decision confirms the

similar judgements of the High Courts in Ireland. But it is further held to impose on companies of unregistered practitioners the same disabilities as are now imposed on individual persons. Should this opinion be well founded the Act will prove even more effective than it has hitherto appeared to be for the prevention of irregular practice under cover of the Companies Acts.

Finance.

The active exercise of its judicial functions is obligatory on the Council, and the effects are, without doubt, salutary from the professional as well as from the public point of view. But these functions involve a heavy drain upon the Council's funds, and it is not easy to see how, under the present law, the drain can be obviated or moderated. Two recent cases, which were unusually prolonged, cost us in legal and other necessary expenses nearly £2,000. The result is that the financial year closed with an aggregate deficit of over £550 in the accounts of three Branch Councils. Though the cases under the Dentists Act were also both numerous and important, the simpler methods of investigation which the Act permits made the proceedings much less costly, with the result that the Dental Fund closed with a sufficient surplus to meet unforeseen emergencies.

It is fortunate that for each of the three preceding years the receipts of the Branch Councils exceeded their expenditure. Except, perhaps, in the case of the Irish Branch, the accumulated surpluses will enable them to meet the exceptional deficits of the present year. It is to be hoped that the business to be dealt with during the session that begins to-day will entail no great expenditure of time or money. One practical consideration will indeed make it expedient that we should complete our sittings within this week. Monday, May 31st, is a Bank Holiday, and the printing establishment on which we depend for our daily programme and other necessary papers will be closed.

Increased Direct Representation.

Dr. Langley Browne has given notice of a motion that the proper steps be taken for adding to the Council a thirty-fifth member, to be elected by the practitioners of England and Wales. It will be for the Council, and afterwards for the Privy Council and for Parliament, to consider whether it is in fact expedient that the addition should now be made. In the near future we shall have an additional member from Ireland, as provided by the recent Universities Act; and we may also expect two additional members from the Universities of Wales and of Bristol. In coming to a decision on this question it will be desirable to have regard on the one hand to the elasticity of our finances, and of our Council chamber, and on the other hand to the unity and efficiency of the Council as at present constituted. By the terms of the Medical Act, the question to be decided resolves itself simply into a question of "expediency." In other words, it is a question to be answered in the light of such practical considerations as I have ventured to recall to your attention, without seeking to prejudice your decision.

The Medical Curriculum.

The Education Committee have had a further opportunity of reviewing the admirable digest of facts relating to the medical curriculum which was included in their report of last November. They will probably be prepared to offer to the Council certain definite conclusions, on which action may be taken if action is required.

The Apothecaries' Hall, Dublin.

The Board of the Apothecaries' Hall of Dublin have informed the Registrar that they have determined to postpone until July 1st the resumption of their "Preliminary Examination in Education," concerning which the Council, on the recommendation of the Education Committee, expressed a strongly adverse opinion at its last meeting. The Executive Committee will report on the reply to this intimation which they deemed it their duty to forward to the Board. At a time when two newly-constituted teaching universities, each with its own Preliminary Examinations, are in process of organization in Ireland, it is difficult to perceive that any advantage to medical culture can arise from the proposed incursion of the Apothecaries'

Hall into the sphere of general secondary education and examination.

The period for which the Council, on the application of the Apothecaries' Hall, appointed Sir Lambert Ormsby to act as an assistant examiner under the provisions of the Medical Act, 1886, will shortly expire. An application for a fresh appointment will be submitted to you on behalf of the Board. The Council will, I feel sure, recognize that Sir Lambert has discharged with efficiency the duties imposed upon him by the Act.

Voluntary Removal from the Registers.

The Executive Committee, in pursuance of the Council's instructions, had, with the assistance of our legal advisers, drafted a Standing Order applicable to cases of medical and dental practitioners who voluntarily apply for the removal of their names from the *Medical* or the *Dentists Register*. Should this Standing Order be approved, it will provide for a *casus omissus* in the procedure of the Council, and remove a difficulty that has occasionally arisen.

Executive Committee.

A vacancy having occurred in February by the retirement of Dr. Pye Smith, the Committee under the Standing Order unanimously co-opted Dr. Norman Moore, the Chairman of the Business Committee, to be one of its members until the annual election during the current session.

Draft Charter of the British Medical Association.

On Saturday last, we received from the Lord President a copy of the Draft Charter prayed for by the British Medical Association, with a request for any observations the Council may have to make thereon. The Draft Charter proposes that certain powers, which are of a comprehensive character, shall be conferred on the Association. Some of the powers appear at first sight to trench on the statutory functions of the Council, and these will require your careful consideration. It will probably be convenient that, in the first instance, the Executive Committee, in consultation with the legal advisers, should examine the Draft Charter, and report to you on the provisions that specially concern the Council.

VOTE OF THANKS.

Dr. LITTLE moved that the President be thanked for his address, and that he be asked to allow it to be printed on the Minutes. Referring to the death of Dr. Lindsay Steven, he said that he had very little knowledge of him until he met him at the meetings of the Council, but Dr. Steven was a man who gave a strong impression of honesty and sincerity in everything he did. In him there was no ulterior motive in any course which he advocated, his only object being the welfare of the profession of which he was such a distinguished member.

Dr. NORMAN CRAIG seconded the resolution, which was agreed to.

BUSINESS COMMITTEE.

On the motion of Dr. NORMAN MOORE, it was agreed that the Business Committee be reappointed, with the substitution of Mr. Morris's name for that of Mr. Young.

RESULTS OF PROFESSIONAL EXAMINATIONS.

The Council then received the following yearly tables for 1908:

- a. I and II Tables showing results of professional medical examinations during 1908.
- b. Table showing results of professional examinations for qualifications in Sanitary Science, Public Health, or State Medicine during 1908.
- c. Table showing results of professional dental examinations during 1908.
- d. Table showing result of preliminary examinations during 1908.
- e. Answers sent by the medical authorities as to the exemptions granted by them in any part of their examinations during the year 1908.
- f. Table showing results of competitions held in January, 1909, for commissions in the Indian Medical Service.

Dr. McVAIL proposed that the tables be received and entered on the minutes.

Dr. SAUNDY desired to call attention to the examination in surgery by the Conjoint Board in England. He did not know whether there was a mistake in the figures or not, but they struck him as being rather extraordinary; 372 passed and 329 were rejected.

Mr. MORRIS said that the number of rejections was very often quite half, and the figures referred to were not far short of the average which had constantly been before the Council.

The resolution was then agreed to.

It was then moved by Dr. McVAIL, seconded by Dr. CATON, and resolved:

That the thanks of the Council be conveyed to the Under Secretary of State for India for the returns which he has again furnished to the Council, with the request that these returns may in the future continue to be furnished to the General Medical Council.

The CHAIRMAN observed that these tables would go automatically to the Examination Committee in case it was desirable to report upon them.

INCREASED DIRECT REPRESENTATION.

Dr. LANGLEY BROWNE moved:

That representations be made to the Privy Council that it is expedient to confer on the registered practitioners resident in England and Wales the power of returning an additional member to the General Council.

He pointed out that the number of persons resident in England and Wales now on the *Medical Register* was 25,168; in Scotland there were 3,845, and in Ireland 2,656. England returned three Direct Representatives, whilst Scotland and Wales returned one each, so that on the numbers alone, in his opinion, a very strong case was made out for giving the general practitioners of England and Wales an additional representative on the Council. In 1887 the Council consisted of thirty members, five of whom were directly nominated through the Privy Council, and twenty represented different universities and corporate bodies, and five Direct Representatives. Since that time four additional members had been added for the universities or other teaching bodies, but no additional direct representative. He proposed that the Council should recommend the Privy Council to appoint an extra Direct Representative. There were many things in connexion with the election of Representatives which, in his opinion, ought to be reformed. He thought that divisions ought to be formed in the country, and that Wales ought to have a Representative of its own; but it would take a new Medical Act to bring that about; whereas the Privy Council, of its own initiative, could add one additional member for England and Wales.

Dr. McMANUS, in seconding the motion, wished to emphasize the fact that the general practitioners thoroughly realized the work which the Council had done for them, and when they looked at the names of those who had been members of the Council since it was first formed in 1858 gladly admitted and freely testified to the fact that, as far as the equipment of the young men who sought the medical profession was concerned, as far as their moral and social standing went, the Council could not be improved upon. They relied on members of the great teaching corporations who were members of the Council to maintain the honour and dignity of the profession, and they recognized that, owing to their action, the young men in the United Kingdom who adopted the medical profession were second to none in the world. It had, however, to be realized that the Act of 1853 was not intended to be final, and that a great deal had taken place since then: that the whole profession might be said to have been revolutionized in a sense. Surely the Council was capable of reform and being administered on a greater and more democratic basis. Reform should come from within itself, and would bring the Council more into touch with the feelings of the rank and file of the profession, which had very strongly the idea that the Council did not sympathize with them, and that it did not in any way try to protect them from quacks of every description.

Dr. LATIMER, in supporting the resolution, asked the Council to recognize the fact that the direct representatives were chosen by an unseen constituency; they were known only by their work in their Divisions and Branches and by their work on the British Medical Association in the past. One cogent reason for increasing the representation was that the men who sat on the Council had a right to be representative of those who sent them there, and not, as hitherto, representative of the whole of England

and Wales. Wales was a distinct entity, possessed a language of her own: had people possessed of strong aspirations, and a population strongly dominated by a feeling of nationality. He contended that, in that spirit, Wales was entitled to have a representative of her own. On the arguments which had been adduced both now and before the general practitioners were entitled to additional representation, and when the Council granted it, which he hoped it would, Wales should be given her right—namely, a representative for herself.

The CHAIRMAN, in reply to Dr. NORMAN MOORE, who asked whether the Privy Council had power to give representation to particular districts, said the only legislation which dealt with the subject was contained in the Act of 1853, which said that three members should be elected by the practitioners of England and Wales.

Dr. SAUNDY pointed out that Wales was not mentioned.

The CHAIRMAN observed that he was about to emphasize that fact. It had been held that England included Wales, and the Privy Council had no power to vary the Medical Act. Therefore, if the additional member were assigned the election would have to take place on the basis of the Act of 1853, and the Privy Council had no power to say that a representative should be elected by the practitioners of Wales.

Further, in reply to Sir JOHN WILLIAMS, he said the resolution, if adopted, was one to which the Privy Council could not give effect.

Mr. MORRIS thought that some of the remarks made were rather calculated to deter members from voting for the resolution. He felt very strongly with Dr. Langley Browne that there was a certain injustice in increasing the number of representatives from new universities, some of whom possessed exceedingly small constituencies, while the direct representatives of the United Kingdom remained the same. He could not forget, however, that in regard to the election there was very considerable indifference on the part of those who had voting power, and although it had been truly stated that the number of those in England and Wales who had votes amounted to 25,000, yet only 47 per cent. of those took advantage of that power. This was emphasized by the fact that at the last election there were no less than ten candidates from various parts of the kingdom. The point to which he really intended to speak was the suggestion that the Council should allocate a member for Wales alone. He would not hesitate in supporting it if it had the power. The Council had just been informed that it had no such power. If it were the case it would strengthen his position very materially in voting for the resolution; but as it required a new Act of Parliament to do it, and it could not be done through the Privy Council, his tendency to support it was somewhat weakened.

Dr. LANGLEY BROWNE replied.

The PRESIDENT, on taking the vote, said it appeared that the motion was carried, but he must take the names and votes. On this being done he declared the motion to be carried. The division list was as follows:

For, 17.

Mr. Morris.	Dr. Knox.	Mr. Hodsdon.
Mr. Thomson.	Dr. Adye-Curran.	Dr. Kidd.
Dr. Caton.	Dr. Langley Browne.	Dr. Little.
Dr. McVail.	Dr. McManus.	Sir Thomas Fraser.
Dr. Walker.	Dr. Latimer.	Sir John Tuke.
Sir Thomas Miles.	Sir John Williams.	

Against, 5.

Dr. Norman Moore.	Sir Charles Ball.	Dr. Finlay.
Sir John Moore.	Sir George Philippon.	

Did not Vote.

The President.	Sir C. Nixon.	Dr. Saundby.
Mr. Tomes.	Dr. Mackay.	Sir Hugh Beavor.
Dr. Taylor.	Dr. Cocking.	

Absent, 3 (One Seat being Vacant).

Sir William Power.	Dr. Burs.	Sir C. Allbutt.
--------------------	-----------	-----------------

Mr. TOMES desired to point out from the Treasurer's point of view that if effect were given to the motion by the Privy Council it would entail an enormous expense. The costs of an election were very heavy. He suggested that, the principle being established, they should wait till the general election of Representatives.

Mr. MORRIS seconded, and observed that the next election would take place in two years.

The PRESIDENT remarked that there was a long course of procedure to be followed before the Privy Council could consider the matter.

Dr. LANGLEY BROWNE expressed his willingness to accept the suggestion of Mr. TOMES, and after some further discussion it was agreed:

That it be a further representation to the Privy Council that the addition in question be not made until the next general election of Direct Representatives.

THE APOTHECARIES' HALL OF IRELAND.

Dr. ADYE-CURRAN moved:

That Reports by Assistant Examiners in Surgery of the Apothecaries' Hall of Ireland be discontinued for the present.

He contended that the Council had not acted quite legally in some of its actions in regard to this matter, and he suggested that these reports, which had been sent to the Privy Council year by year, should be withheld for the present.

The PRESIDENT said he felt bound to state that the suggestion made as to the illegality of the actions was quite unfounded, and he said that after having taken the fullest possible advice.

Dr. McMANUS seconded the motion for the purpose of allowing it to be discussed.

Sir CHRISTOPHER NIXON pointed out that the examination in question was conducted by the Council in conjunction with the Apothecaries' Hall, and therefore there could be no indignity to the Apothecaries' Hall in having a report from the Council's own examiners as to the conduct of an examination held by the Council with the Apothecaries' Hall.

Dr. ADYE-CURRAN replied.

The PRESIDENT put the resolution to the meeting, and declared it lost.

Dr. ADYE-CURRAN asked that the names and numbers should be taken. Upon this being done, the Registrar announced that 14 voted against, 5 for; 11 did not vote, 3 were absent.

Dr. ADYE-CURRAN then moved:

That Sir Thomas Myles, M.D., F.R.C.S.I., be appointed an Assistant Examiner in Surgery to the Apothecaries' Hall, Dublin, for a period of four years in lieu of Sir Lambert Ormsby, who retires by rotation, his term having expired.

Dr. McMANUS seconded.

Dr. McVAIL inquired whether the Council could legally appoint one of its members.

The PRESIDENT replied that he believed it was legal.

The PRESIDENT then put the motion, and declared it carried.

Dr. NORMAN MOORE moved that the report by the Executive Committee on the proposed Preliminary Examination by the Apothecaries' Hall, Dublin, be received and entered on the minutes.

The report concluded with the following resolution adopted by the Executive Committee on February 28th:

That the Committee have received with regret the intimation of the Board that it still proposes to hold a Preliminary Examination, though the date is now postponed to July 1st, 1909. The Committee remind the Board of the Council's resolution of November 28th, 1908, which was in general terms, and had no reference to any particular date. They propose to report the Secretary's letter of January 16th, 1909, to the General Council at the May Session.

Dr. SAUNDY seconded.

Dr. ADYE-CURRAN gave notice that it was the intention of the Apothecaries' Hall, Ireland, to re-establish its Preliminary Examination in July next, and to hold it annually. It might not be generally known that this examination had been held for a great number of years. Some ten or twelve years ago, at the request of the General Medical Council, that examination was discontinued on the same condition as the Hall now wished to re-establish it, namely, that it was understood at the time that the Royal College of Surgeons of Ireland, in conjunction with the Royal College of Physicians, should also discontinue a Preliminary Examination. But while the Apothecaries' Hall, Ireland, had discontinued the other bodies had held on. The Hall considered that since it discontinued the Preliminary Examination it had been working under a great disadvantage. He desired it to be understood that it was not with a view to running contrary to the opinion of the Council that this had been done; it was a matter of expediency in order that the Apothecaries' Hall might work on even lines with the other licensing bodies which

ran side by side with it, and which worked to its prejudice.

Sir HUGH BEVOR pointed out that the Apothecaries' Society in London gave up its Preliminary Examination at the wish of the Council in 1883.

The PRESIDENT observed that if the Preliminary Examinations were started, notwithstanding the strong opinion of the Council, it would be a purely domestic arrangement on the part of the Apothecaries' Hall. It was not recognized by the Examination Committee as a Preliminary Examination, and need not be recognized by any other licensing body in the country.

The motion was then adopted.

The PRESIDENT observed that no answer had been received by the Education Committee from the Apothecaries' Hall other than the notification made orally by Dr. Adye-Curran, and he asked the Chairman of the Committee to take note of the fact.

VOLUNTARY WITHDRAWAL FROM THE REGISTERS.

A report from the Executive Committee on the subject of voluntary withdrawals of names from the *Medical Register* and *Dentists Register* was received and entered on the minutes.

The report contained a memorandum from the legal adviser recommending the Council to adopt the following standing order:

"Every application by a Registered Medical Practitioner or Dentist for the removal of his name at his own request from the *Medical* or *Dentists Register* shall be accompanied by a Statutory Declaration, to be made by the applicant, that he is not aware of any proceedings or of any reason for the institution of any proceedings which might result in establishing cause for the erasure of his name from the *Medical* or *Dentists Register* without his consent, or for depriving him without his consent of any qualification or licence entitling him to be registered."

ADJOURNMENT.

The Council then went into camera to consider private business and strangers were directed to withdraw. At the conclusion of the business in camera the Council adjourned.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

THE following appointments have been made at the Admiralty: Fleet Surgeon E. T. MEAGHER to the *Emerald*, additional, for the Haulbowline Yard, May 25th; Fleet Surgeon G. T. BISHOP to the *Cumberland*, May 25th; Staff Surgeon H. S. BURNISTON, M.B., to the *Britannia*, May 25th; Surgeon E. L. ATRINSON to be lent to the *Levenham*, temporarily, May 19th; Surgeons G. T. VERRY, W. A. H. McERROW, M.B., F. G. HITCH, M.B., J. J. RICHARDSON, M.B., S. L. MACBEAN, M.B., and A. C. WILSON to the *Victory*, additional, for disposal, June 12th; Surgeons G. R. McCOWEN, M.D., E. J. H. GARSTIN, M.B., and W. MEANS, M.B., to the *Pembroke*, additional, for disposal, June 12th; Surgeons T. R. L. JONES, F. H. PLAGE, M.B., C. E. BAINBRIDGE, M.B., and F. W. MEIER to the *Frida*, additional, for disposal, June 12th; Surgeon J. GLAISTER, M.B., to remain at Haslar for the present; Surgeon W. BRADBURY, M.B., to the *Pembroke*, for the *Widley*, additional, for disposal, June 12th; Fleet Surgeon R. F. BATE and Surgeon S. F. DUNLEY to the *Commonwealth*, on recommissioning, May 25th; Fleet Surgeon M. L. B. RIDD to the *Mors*, on recommissioning, May 25th.

ARMY MEDICAL SERVICE.

Surgeon-General P. M. ELLIS, who is serving in India as Principal Medical Officer 8th (Lucknow) Division, is granted leave out of India on medical certificate for six months.

ROYAL ARMY MEDICAL CORPS.

Lieutenant-Colonel A. S. ROSE, M.B., retires on retired pay, May 25th. His commissions are thus dated: Surgeon, February 5th, 1881; Surgeon-Major, February 5th, 1893; Lieutenant-Colonel, February 5th, 1901. He served in the Egyptian war in 1882 (medal with clasp, and with the bronze star); in the Sudan in 1894 (clasp); and at Suakin, with the Sudan expedition in 1895 (clasp). He was also in the South African war in 1899-1902, being present at the relief of Ladysmith, including the actions at Colenso, Spion Kop, and Vaal Krantz, where he was severely wounded; he was mentioned in dispatches, and received the Queen's medal with two clasps and the King's medal with two clasps. Lieutenant W. H. S. BURNEY is seconded for service with the Egyptian Army, April 1st.

INDIAN MEDICAL SERVICE.

Lieutenant-Colonel W. A. CORREY, Bombay, is promoted to be Colonel. He was appointed Surgeon, April 2nd, 1881, and became Lieutenant-Colonel, April 2nd, 1901. He served with the Burmese expedition in 1885-7, receiving a medal with clasp. Lieutenant-Colonel A. STROCK, M.D., Bengal, is permitted to retire from the service, from March 25th. He joined the Indian Army as Surgeon, April 2nd, 1881, and was made Lieutenant-Colonel, April 2nd, 1901.

MILITIA.
ROYAL ARMY MEDICAL CORPS.
CAPTAIN W. FLETCHER, D.S.O., M.B., resigns his commission, September 23rd, 1908.

TERRITORIAL FORCE.
LEONARD.
SURGEON-LIEUTENANT M. W. COLEMAN, M.D., Berks (Hungerford), resigns his commission, April 30th.

ROYAL FIELD ARTILLERY.
Surgeon-Captain G. H. BUTTER, Second South Midland Brigade, resigns his commission, March 31st.

ROYAL ARMY MEDICAL CORPS.
First Home Counties Field Ambulance.—CAPTAIN W. J. WOODMAN resigns his commission, February 11th.

Second London (City of London) Field Ambulance.—HALDWINSTEIN D. DAVIS to be Lieutenant, April 16th.

Fourth London Field Ambulance.—WILLIAM COWIE, M.B., to be Lieutenant, April 7th.

Third Western General Hospital.—Surgeon-Lieutenant-Colonel and Honorary Surgeon Colonel D. HEPBURN, M.D., from the Second Volunteer Battalion the Welsh Regiment, to be Lieutenant-Colonel, with the honorary rank of Surgeon-Colonel, with precedence as in the Volunteer Force, April 1st, 1908; EWEN J. MACLEAN, M.D., to be Major, March 11th.

Third South Midland Field Ambulance.—Lieutenant B. M. H. ROGERS, M.B., to be Captain, April 8th.

For Attachment to Units other than Medical Units.—Major J. F. TAYLOR, Lieutenant-Colonel and Honorary Surgeon-Colonel E. M. GARSTANG, M.D., from the 2nd Volunteer Battalion the Loyal North Lancashire Regiment, to be Lieutenant-Colonel, with the honorary rank of Surgeon-Colonel, with precedence as in the Volunteer Force, April 1st, 1908; Superannuated Captain F. LACE, from the 4th Battalion the Prince Albert's (Somersetshire Light Infantry), to be Major, March 1st; JAMES McGRATH, M.D., to be Lieutenant, March 31st; JAMES W. HIGGS, M.B., to be Lieutenant, April 1st; JAMES A. REEDERS, M.B., to be Lieutenant, April 15th; ROBERT V. G. MONCKTON, M.D., to be Lieutenant, April 16th.

Attached to Units other than Medical Units.—Major J. F. TAYLOR, to be Lieutenant-Colonel, April 4th, 1908; Captain H. STEEDMAN, M.D., to be Major, November 23rd, 1908.

CHANGES OF STATION.

THE following changes of stations amongst the officers of the Army Medical Service have been officially reported to have taken place during April:

	FROM	TO
Lieut.-Col. W. Hefstman	Capetown	W. Command.
" T. E. Nodding	Harrisburgh	Cork
" D. V. O'Connell, M.D.	Woolwich	Shorncliffe.
" H. N. Thompson, D.S.O.	Aldershot	Lucknow.
" M.B.		
" C. Birt	Millbank	Malta.
" R. S. F. Henderson, M.B.	Calcutta	Simla.
" J. R. Forrest	Rangoon	Maymyo.
" L. T. M. Nash	Barrackpore	Ranikhet.
" M. O'Halloran, M.D.	Capetown	E. Command.
" J. H. Daly	Cork	Tipperary.
" H. M. Adamson, M.B.	Ranikhet	Cawnpore.
" D. Hennessy, M.D.	Deolali	Almदनगर.
" R. Holycroft	Dagshai	Ambla.
" H. T. Knudsen, M.B.	Dublin	Cairo.
Major W. Halloran, M.B.	Julundur	London Dist.
" C. W. H. Whitestone, M.B.	Hounslow	Hyderabad.
" T. W. Gibbard, M.B.	Ambla	Dagshai.
" T. J. Lennihan, M.B.	Newport	Colchester.
" F. W. Begbie	Mhow	"
" L. A. Mitchell, M.B.	"	Woking.
" G. M. McNaught, M.D.	Frederia	Wynberg.
" T. McDonald, M.B.	Lucknow	Allahabad.
" H. W. K. Read	Allahabad	Lahore.
" F. R. Buswell	Aden	London Dist.
Captain W. P. Gwynn	Hyderabad	Quetta.
" C. J. O'Gorman, D.S.O.	"	N. Command.
" J. G. Gill	Netley	Peshawar.
" M. H. G. Fell	Chester	Cairo.
" G. M. Goldsmith, M.B.	Meiktila	Maymyo.
" H. D. Packer	"	Devonport.
" H. M. Nicholls, M.B.	Woolwich	Karachi.
" J. Matthews	"	Queenstown.
" W. C. Croly	Cork	Tosham.
" W. J. P. Adey-Curran	Tidworth	Devonport.
" B. B. Burke	Fort Maher	"
" R. F. Ellery	Falmouth	"
" T. B. Unwin, M.B.	I. A. M. Coll.	Lichfield.
" A. W. Gibson	Hunslow	Tidworth.
" W. L. Steele	Edinburgh	Glastow.
" R. McK. Skinner	Edinburgh	Glastow.
" D. L. Harding, F.R.C.S.I.	Madras	Western Com.
" M. C. Beatty, M.B.	Beltrast	Enniskenil.
" E. Y. Aylen	Bellary	Kirkc.
" S. M. Adey-Curran	Tipperary	Chester.
" W. J. S. Harvey	Cork	Bere Island.
" W. F. Tyndale, C.M.G., M.B.	Lucknow	Southern Com.
" P. Davidson, D.S.O., M.B.	Rawal Pindi.	"
" R. Rutherford, M.B.	Perth	Edinburgh.
" J. G. Bell, M.B.	Lahore	Newport.
" T. S. Coates, M.B.	Mhow	Western Com.
" A. E. B. Wood, M.B.	Fyzabad	Eastern "
" J. C. G. Carmichael, M.B.	Bellary	Western "
" J. A. W. Webster	Poona	Gravesend.
" F. C. Lambert	Capetown	Riofmontein.
" J. B. Melton, M.B.	Bangalore	Western Com.
" R. C. Wilford	Bellary	Dublin.

" L. Murphy	"	Dorchester.
" G. S. Parkinson	Dublin	Belfast.

Lieutenant Colonel A. G. Kay, M.B., retired pay, has been placed in medical charge of troops at Clifton, Bristol.

Lieutenant-Colonel H. Charlesworth, C.M.G., retired pay, has been transferred from London to Nottingham; and Lieutenant-Colonel H. M. Battersby, retired pay, from Bull Point to Bodmin.

Vital Statistics.

EPIDEMIC MORTALITY IN LONDON.

The accompanying diagram shows the prevalence of the principal epidemic diseases during the first quarter of the year; the proportions of each disease and its relative fatality compared with that in the corresponding periods of recent years can thus be readily seen.

Small-pox.—One fatal case of this disease belonging to the City of Westminster was registered during the quarter; this is the first death from this disease of London resident second since the epidemic of 1905. Four small-pox patients were admitted to the Metropolitan Asylums Hospitals during the quarter, and one remained under treatment at the end of March last.

Measles.—The deaths from measles, which had been 477, 258, and 457 in the three preceding quarters, further rose last quarter to 1355, and were more than double the corrected average number for the corresponding period of the five preceding years; this disease was proportionally the most fatal last quarter in 1908.

Scarlet Fever.—The fatal cases of scarlet fever, which had been 122, 104, and 135 in the three preceding quarters, declined again to 109 in the quarter under notice, and were 21 fewer than the corrected average number. The greatest proportional mortality from this disease was recorded in Chelsea, Stoke Newington, Holborn, Finsbury, Bethnal Green, Poplar, and Woolwich. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals, which had been 2,514, 3,431, and 3,938 at the end of the three preceding quarters, had declined again to 2,412 at the end of last quarter; 3,892 new cases were admitted during the quarter, against 4,194, 5,344, and 6,223 in the three preceding quarters.

Diphtheria.—The deaths from diphtheria, which had been 131, 134, and 227 in the three preceding quarters, further rose to 234 last quarter, and were 21 in excess of the corrected average number. The highest death-rates from this disease in the quarter under notice were recorded in Fulham, Chelsea, St. Pancras, Lambeth, and Poplar. There were 1,103 diphtheria patients under treatment in the Metropolitan Asylums Hospitals at the end of March, against 788, 951, and 1,241 at the end of the three preceding quarters; 1,678 new cases were admitted during the quarter, against 1,355, 1,449, and 2,141 in the three preceding quarters.

Whooping-cough.—The fatal cases of whooping-cough, which had been 334, 165, and 96 in the three preceding quarters, rose again last quarter to 384, but were 135 below the corrected average. The corresponding quarters of the five preceding years. This disease was proportionally most fatal in Paddington, Hammersmith, Fulham, Finsbury, St. Pancras, Lambeth, and Battersea.

Fever.—Under this heading are included deaths from typhus, from enteric fever, and from ill-defined pyrexia. The deaths referred to these different forms of "fever" which had been 40, 27, and 126 in the three preceding quarters, declined again last quarter to 60, but slightly exceeded the corrected average number. All the deaths under this

DEATHS FROM EPIDEMIC DISEASES IN LONDON DURING THE FIRST QUARTER OF 1909.

NOTE.—The black lines show the recorded number of deaths from each disease during each week of the quarter. The dotted lines show the average number of deaths in the corresponding weeks of the five years, 1904-8.

heading last quarter were from enteric fever, the highest death-rates from this disease being recorded in Kensington, Stoke Newington, Hackney, Holborn, Shoreditch, Poplar, and Deptford. The number of enteric fever patients under treatment in the Metropolitan Asylums Hospitals, which had been 48, 95, and 147 at the end of the three preceding quarters, had declined again to 87 at the end of last quarter; 182 new cases were admitted during the quarter, against 94, 166, and 313 in the three preceding quarters.

Diarrhoea.—The 180 deaths from diarrhoea in London last quarter were 20 below the corresponding average number in the corresponding period of the five preceding years. The greatest proportional mortality from this disease last quarter was recorded in Hackney, Shoreditch, Bethnal Green, Stepney, Poplar, Southwark, and Lewisham.

In conclusion it may be stated that the 2,103 deaths in London referred to the principal epidemic diseases last quarter were 36.6 per cent. above the average. The lowest death-rates from these diseases in the aggregate were recorded in Paddington, the City of Westminster, Hammersmith, the City of London, Holborn, and Lewisham; and the highest rates in Shoreditch, Bethnal Green, Poplar, Southwark, Brompton, and Deptford.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 8,368 births and 4,651 deaths were registered during the week ending Saturday last, May 22nd. The annual rate of mortality in these towns, which had been 14.5, 14.1, and 13.7 per 1,000 in the three preceding weeks, increased again last week to 14.7 per 1,000. The rates in the several towns ranged from 3.8 in Hornsey, 6.1 in Walthamstow, 6.4 in Rotherham, 6.9 in Hastings, 7.2 in Tottenham, 7.5 in Devonport, 8.4 in York, and 8.6 in Bourne-on-Hill, to 20.0 in Merthyr Tydfil, 20.5 in Stockton-on-Tees, 21.1 in Oldham, 21.5 in West Bromwich, 22.4 in Tyne-mouth, 23.4 in Coventry, and 28.9 in Wolverhampton. In London the rate of mortality was 14.0 per 1,000, while it averaged 14.9 in the seventy-five other large towns. The death rate from the principal infectious diseases in the seventy-six towns averaged 1.3 per 1,000; in London the death-rate from these diseases was 1.4 per 1,000, while among the other large towns it ranged upwards to 2.3 in Norwich, 3.0 in West Bromwich, 3.1 in Reading, 3.7 in Handsworth (Staffs.), 4.6 in Coventry, and 7.5 in Wolverhampton. Measles caused a death-rate of 2.3 in Wigan, 2.5 in Norwich, 2.6 in Coventry, 3.1 in Reading, and 6.5 in Wolverhampton; scarlet fever of 1.1 in West Bromwich, diphtheria of 1.5 in Handsworth (Staffs.) and whooping-cough of 1.2 in Tottenham, 1.3 in Preston, 1.5 in Smethwick, and 1.6 in Leyton. The mortality from enteric fever and from diarrhoea showed no marked excess in any of the large towns; two fatal cases of small-pox were registered in Bristol, but none in any other of the large towns. The number of scarlet fever cases under treatment in the Metropolitan Asylums Hospital and in the London Fever Hospital, which had been 2,184, 2,115, and 2,115 at the end of the three preceding weeks, had risen again to 2,234 at the end of last week; 348 new cases were admitted during the week, against 305, 309, and 313 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

During the week ending Saturday, May 15th, 974 births and 532 deaths were registered in eight of the principal Scottish towns. The annual rate of mortality in these towns, which had been 17.4, 16.9, and 16.2 in

the three preceding weeks, further declined to 14.9 per 1,000 in the week under notice, but was 1.2 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scottish towns, the death-rates ranged from 9.7 in Leith and 10.3 in Perth to 17.0 in Paisley and 19.4 in Dundee. The death-rate from the principal infectious diseases averaged 1.3 per 1,000 in these towns, the highest rates being recorded in Dundee and Paisley. The 254 deaths registered in Glasgow included 3 from scarlet fever, 3 from diphtheria, 4 from whooping-cough, and 8 from diarrhoea. Four fatal cases of whooping-cough were recorded in Edinburgh; 2 of whooping-cough and 5 of diarrhoea in Dundee; and three of measles and 2 of diarrhoea in Paisley.

In the week ending Saturday last, May 22nd, 929 births and 624 deaths were registered in these eight towns. The annual rate of mortality rose to 17.5 per 1,000, and was 2.8 per 1,000 above the mean rate during the same period in the seventy-six large English towns. The rates in the eight Scottish towns ranged from 14.0 in Leith and 14.1 in Aberdeen to 20.2 in Greenock and 28.9 in Paisley. The death-rate from the principal infectious diseases averaged 2.1 per 1,000, the highest rates being recorded in Glasgow and Paisley. The 286 deaths registered in Glasgow included 2 which were referred to measles, 3 to scarlet fever, 4 to diphtheria, 22 to whooping-cough, and 8 to diarrhoea. Two fatal cases of diphtheria, 10 of whooping-cough, 2 of cerebrospinal meningitis, and 2 of diarrhoea were recorded in Edinburgh, 4 of diarrhoea in Dundee, and 2 of measles and 2 of whooping-cough in Paisley.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, May 22nd, 659 births and 484 deaths were registered in the twenty-two principal urban districts of Ireland as against 638 births and 410 deaths in the preceding period. The annual death-rate in these districts, which had been 20.6, 18.3, and 18.7 per 1,000 in the three preceding weeks, rose to 22.1 per 1,000 in the week under notice, this figure being 7.4 per 1,000 higher than the mean annual death-rate in the seventy-six English towns for the corresponding period. The figures in Dublin and Belfast were 22.3 and 24.3 respectively, those in other districts ranging from 4.0 in Dundalk and 4.1 in Drogheda to 34.4 in Armagh and 39.6 in Queenstown, while Cork stood at 27.4, Londonderry at 16.9, Limerick at 19.1, and Waterford at 27.3. The zymotic death-rate in the twenty-two districts averaged 1.6 per 1,000 as against 1.3 per 1,000 in the preceding period.

Hospitals and Asylums.

KINGSEAT ASYLUM, ABERDEEN.

The annual report for the year 1908 of Dr. H. de Maine Alexander, the medical superintendent of this village asylum for the city of Aberdeen, shows that on December 31st, 1907, there were 416 patients on the register, and that on the last day of 1908 the patients numbered 414. This cessation of increase of the asylum population was due to a comparatively low admission-rate, which Dr. J. Macpherson, Commissioner in Lunacy, states was common, for some unknown reason, to the whole of

Scotland. The total cases under care during the year numbered 519, and the average numbers daily resident 409. During the year 103 were admitted, of whom 71 were first and 32 not-first admissions. In 50 the attacks were first attacks within three, and in 13 more within twelve, months of admission; in 27 not-first attacks within twelve months of admission; and in the remainder the attacks, whether first or not, were of more than twelve months' duration (10 of congenital origin (3). The admissions were classified according to the forms of mental disorder into: Mania of all kinds, 12; melancholia of all kinds, 23; senile and secondary dementia, 6; general paralysis, 1; alcoholic insanity, 20; acute confusional insanity, 3; primary dementia, 5; delusional insanity, 5; insanity with gross brain lesion or following trauma, 4; with epilepsy, 4; with chorea, 1; with hysteria, 1; and with hypochondriasis, 2; stupor, 2; alternating insanity and volitional insanity, 1 each; and congenital or infantile defect, 6. As regards causation, alcohol was assigned in 20, or 20 per cent.; syphilis in 1; critical periods in 30; exhaustion in 10; influenza in 10; epilepsy in 5; emotional shock in 4; lead poisoning in 3; cerebral haemorrhage and chorea in 1 each; and previous attacks in 27. In 40, or 40 per cent., a neurotic heredity was ascertained.

During the year 42 were discharged as recovered, giving a recovery-rate on the admissions of 40.7 per cent.: 22 as relieved, and 2 as not improved. Also 39 died, giving a death-rate on the average numbers resident of 9.5 per cent. The deaths were due in 17 cases to cerebro-spinal diseases, including 7 deaths from general paralysis; in 5 to diseases of the circulatory system; in 1 to diseases of respiratory organs, including 3 deaths from pulmonary tuberculosis; in 1 to carcinoma of the bladder, and in the remainder to general diseases. There were 3 accidents involving fractures of bones during the year and 2 escapes, both patients being brought back on the following day. It will be remembered that there are no walls around the asylum or separate villas at Kingseat, the idea of not being shut in having in itself, Dr. Alexander says, a restraining influence on the patients.

ST. ANDREW'S HOSPITAL FOR MENTAL DISEASES, NORTHAMPTON.

FROM the annual report for the year 1908 of Dr. J. Bayley, the Medical Superintendent of this large private asylum, we see that on January 1st, 1908, there were 415 patients on the asylum registers and 423 on the last day of the year. The total cases under care, excluding voluntary boarders, numbered 485, and the average number daily resident 414, or 4 more than in the previous year. During the year 70 were admitted, being the lowest number of admissions since the year 1890. Of the total admissions, 47 were direct admissions, 20 transfers, and 3 statutory readmissions. As to the duration of disorder on admission, in the direct admissions the attacks were first attacks within three months in only 13 and in 8 more within twelve months, not-first attacks within twelve months in 16, in the remainder the attacks being either of more than twelve months or of unknown duration or congenital cases. Considering in this abstract only direct admissions, these were classified according to the forms of mental disorder into: Mania of all kinds, 22; melancholia of all kinds, 13; senile and secondary dementia, 6; general paralysis, 1; primary dementia, 5; delusional insanity, volitional insanity, and congenital defect, 1 each. As regards etiological factors and associated conditions, alcohol was assigned in only 2, and acquired syphilis in 4; critical periods in 3, mental stress in 12, and various bodily diseases or disorders in 5. An insane heredity was ascertained in 15, or 30 per cent., a neurotic heredity in 1, and congenital defect was ascertained in 5. During the year 23 were discharged as recovered, giving a recovery-rate on the direct admissions of 45.0 per cent., or of recoveries in the direct admissions on the direct admissions of 44.0 per cent.; also 7 were discharged as relieved, 15 as not improved, and 17 died. The deaths, which give a percentage death-rate on the average numbers resident of 4.1, were due in 7 cases to senile decay, and in single numbers to abscess, apoplexy by drowning, cancer of breast, enteritis, general paralysis, heart disease, strangulation of bowel, exhaustion, syncope, and stricture of urethra. The death by suicide was the only unfortunate incident in a very satisfactory year. The general health was good throughout the year, and no case of infectious disease had to be recorded either at the hospital or at any of the houses belonging to it at Moulton Park or Llanfairfechan. The number of patients who visited the seaside house at the last-named place was 184, the largest on record, and the house and villas were occupied during the whole of the year.

BIRMINGHAM LYING-IN CHARITY.

THE sixty-sixth annual report of this charity records a year of considerable expansion, as it is the first report issued in connexion with the new Maternity Hospital. It has been found necessary already to increase the staff at the hospital, and in consequence a house adjacent to the hospital has been taken, which provides accommodation for fifteen pupils, a district midwife, and an assistant midwife. A resident house-surgeon and a pathologist have been appointed during the year. The number of cases received into the hospital was 370, and in the districts 1,547 cases were attended. The Investigation Committee inquired into 486 cases, and 123 were refused, while 155 were allowed. There was a deficiency on the year's accounts of about £500, and the bank account had been overdrawn to the extent of £1,502.

Vacancies and Appointments.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column, advertisements must be received not later than the first post on Wednesday morning.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

THE British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the BRITISH MEDICAL JOURNAL is supplied weekly, post free, to every member of the British Medical Association, wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent

by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Service on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three Members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the BRITISH MEDICAL JOURNAL for non-members is £1 8s. 0d. for the United Kingdom, and £1 15s. 0d. for abroad.

Meetings of Branches & Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

BATH AND BRISTOL BRANCH:

TROWBRIDGE DIVISION.

A MEETING of this Division was held on May 29th.

Contributions to Hospitals by Employers and Employees.

—In regard to this matter it was resolved:

That the meeting disapproves the motions of the Representative Meeting.

Fresh Public Medical Institutions.—On this subject it was resolved:

That the meeting approves the motion of Council.

BIRMINGHAM BRANCH:

COVENTRY DIVISION.

THE annual meeting of this Division was held at 8.20 p.m. on May 25th, at the Coventry and Warwickshire Hospital, Dr. HARMAN BROWN in the chair. Fourteen members were present.

Election of Officers.—The following were elected officers for the ensuing year: *Chairman*, Dr. Richardson Rice; *Vice-Chairman*, Dr. Snell; *Secretary*, Dr. Pendred; *Representative on Branch Council*, Dr. J. Orton; *Representative on Public Medical Service*, Dr. Pickup; *Representative on New Dispensary Service*, Dr. Collington.

Votes of Thanks to Retiring Officers.—Votes of thanks were passed to the retiring Secretary, Dr. Orton, and to Dr. Moore, Representative on the Council of the Branch since the formation of the Division, for their past services.

Executive Committee.—The Executive Committee were elected as follows: Drs. Brown, Kendrick, Lowman, Moore, Phillips, and Pickup.

Representation of Local Medical Profession on Hospital Boards.—The matter of representation of the local profession upon the boards of hospitals and similar bodies was brought forward, and Dr. MOORE proposed:

That the Division requests the medical staff of the Coventry Hospital to consider the representation of the medical profession upon the hospital staff.

This was seconded by Dr. Rice, and carried unanimously.

Chairman's Annual Address.—Dr. MOORE proposed, and Dr. PICKUP seconded:

That the recommendation *re* the Chairman's annual address be laid upon the table.

Carried.

Vote of Thanks to Hospital Committee.—Dr. BROWN proposed that a cordial vote of thanks be passed and sent to the committee of the hospital for the continued use of their board room for meetings. This was seconded by Dr. ORTON, and carried.

COVENTRY AND NUNEATON AND TAMWORTH DIVISIONS.

THE annual meeting of the constituency formed by Coventry Division and Nuneaton and Tamworth Division was held on May 25th, at 8 p.m., in the Board Room of the Coventry and Warwickshire Hospital. There were present Drs. Moore, Brown, Rice, Pickup, Ballantyne, Collington, Lowman, Wood, Kendrick, Weaver, and Orton.

Chairman.—Upon the proposition of Dr. ORTON, seconded by Dr. MOORE, Dr. Harman Brown was voted to the chair.

Nomination of Representative at Annual Representative Meeting.—Dr. WOOD proposed, and Dr. ORTON seconded, that Dr. Milner Moore be again asked to allow himself to be nominated as Representative for the annual meeting at Belfast. This was carried unanimously. Dr. MOORE expressed his willingness again to represent the constituency.

Instructions to Representative.—Various matters were mentioned, and it was agreed to allow the Representative a free hand in voting on the same unless need should arise for a special meeting of the constituency to further instruct him.

BORDER COUNTIES BRANCH:

ENGLISH DIVISION.

The second annual general meeting of the Division was held at the County Hotel, Carlisle, on Friday, May 21st, at 12.45 p.m., to allow members to proceed to Lockerbie for the Branch meeting, which was being held the same day. Dr. FARQUHARSON was in the chair, and there were present: Drs. Graham Penny, Morison, R. MacLaren, H. Mitchell, J. W. Orerar, Fisher, and Hill.

Confirmation of Minutes.—The minutes of the previous meeting were read, approved, and signed by the Chairman.

Apologies for Non-attendance.—Dr. HILL, who was acting as secretary, announced that he had received apologies for absence from the following members: The Chairman, Dr. Dudgeon; the Secretary, Mr. N. MacLaren; Drs. Burnett, Edington, and Johnston.

Report of Executive Committee.—Dr. HILL then read the report of the Executive Committee for the past year, which, on the motion of the CHAIRMAN, seconded by Dr. ORERAR, was adopted.

Election of Office-bearers.—The meeting proceeded to elect the office-bearers for the ensuing year, in accordance with the nomination of the Executive Committee, namely: Chairman, Dr. Farquharson; Vice-Chairman, Dr. Orerar; Secretary, Mr. Tigg. The following were elected to the Executive Committee, namely: Drs. Barnes, Bowser, Burnett, Doughty, Morison, and Muriel.

Representative at Representative Meeting.—Dr. Harrison Mitchell was unanimously elected to represent the Division at the Representative Meeting at Belfast.

Branch Council.—The present Representatives on the Branch Council were re-elected, namely: Drs. Bowser, Edington, Graham, and Penny.

Ethical Committee.—Dr. Henry Barnes and Dr. Harrison Mitchell were elected members of the Ethical Committee.

Local Government Board and Unqualified Practice.—Subsequently Dr. MORISON, of Carlisle, introduced a brief discussion with reference to the Local Government Board's circular on the subject of unqualified practice; and the meeting decided that any steps taken towards the compilation of evidence on the matter should be the work of the various medical officers of health rather than that of a Division of the Association.

DORSET AND WEST HANTS BRANCH.

Election of Officers.—At the spring meeting of this Branch, held on May 5th, the following were elected officers for the ensuing year: President, Charles J. Marsh, Yeovil; Vice-Presidents, W. Burroughs Cosens, The Gables, Dorchester; E. Kaye Le Fleming, M.B., St. Margarets, Wimborne; Honorary Secretary and Treasurer, James Davison, M.D., Streteplace, Bournemouth; Representative on Council of Association, James Davison, M.D., Streteplace, Bournemouth; Branch Council, Drs. Eleanor Bond, F. C. A. Bushman, E. Kaye Le Fleming, C. H. Watts Parkinson, F. W. Ramsay, W. V. Snow, Wm. Johnson Smyth, Decimus Curme, G. J. W. Flower, P. W. MacDonald, W. Rendall, J. F. L. Whittingdale.

[A report of the meeting appeared in the SUPPLEMENT of May 29th, p. 324.]

GLASGOW AND WEST OF SCOTLAND BRANCH:

GLASGOW NORTH-WESTERN DIVISION.

The annual meeting of this Division was held on Wednesday, May 26th, at 8.30 p.m., in the Burgh Hall, Hillhead, Dr. J. C. EDMISTON, the Vice-Chairman, presiding, and eight other members being present.

Apology for Non-attendance.—An apology for the absence of the Chairman (Dr. John Norton) on account of indisposition was read.

Confirmation of Minutes.—The minutes of the last meeting were read and approved.

Dispensaries for Tuberculosis.—The SECRETARY reported that he had communicated with the Branch Council as instructed with regard to the contemplated institution of dispensaries for tuberculosis in Glasgow; and at the next meeting of Council it had been intimated that the Corporation had not yet proceeded far enough in the matter to make a definite statement, and it was accordingly remitted to the Chairman and Secretary to watch

developments and report progress of events. Since then no further information had been received. This report was, after some discussion, adopted by the meeting.

Annual Report and Financial Statement.—The annual report and financial statement of the Division was presented, and was adopted.

Election of Office-bearers.—The following office-bearers were elected: Chairman, Dr. John Morton; Vice-Chairman, Dr. J. C. Edmiston; Honorary Secretary and Treasurer, Dr. Wm. Caslake; Representative to Representative Meeting, Dr. Thos. Richmond; Representatives to Branch Council, Dr. D. J. Mackintosh, M.V.O., Dr. W. Caslake; Ordinary Members of Committee, Dr. Robert Bruce, Dr. A. T. Campbell, Dr. Malcolm Campbell, Dr. A. G. Hay, Dr. D. McNicol, Dr. A. Mehan, Dr. T. Richmond, Dr. H. Whitehouse.

Representation of Local Medical Profession on Hospital Boards.—The question of the representation of the local medical profession on hospital boards and similar bodies was discussed, and attention was directed to the statements in the SUPPLEMENT for April 10th. After some debate the following motion was adopted:

That this Division approves of the principle of representation of the medical profession on boards of hospitals and medical charities, where such representation does not at present exist.

The Representative was instructed accordingly.

Current Work of the Association.—The SECRETARY read the Medical Secretary's monthly report on the current work of the Association which had been sent for communication to the Division. The report was evidently appreciated, and it was thought that its continuation would help in keeping up the interest of the Divisions in the work of the Association.

Communication from Chelsea and Fulham Division.—A communication from the Chelsea and Fulham Division was read relating to some action, not specified, of the Royal College of Surgeons, England, and it was resolved that "the letter lie on the table."

Earlier Appointment of Representative.—Dr. BUCHANAN, having given due notice, moved:

That it be remitted to the Chairman and Secretary to make inquiry as to the steps necessary to alter the rules so that a Representative may be appointed at an earlier date than at present.

The proposer indicated that this motion was to bring the matter before the Division without urging immediate action, in view of the possible grant of a Charter, when circumstances might be otherwise altered. He suggested, however, that if a change was made the election of a Representative should take place soon after October in each year. The motion was agreed to.

Proposed Further Meeting.—It was intimated that there were several matters for discussion which had appeared since the billet for this meeting was printed, including the agenda for the annual meeting. It was decided, therefore, to hold another meeting soon to discuss those.

GLOUCESTERSHIRE BRANCH.

The annual meeting was held at the Cheltenham General Hospital on May 20th, at 6 p.m., the PRESIDENT in the chair, and thirty-five members present.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Election of Officers.—Mr. T. S. ELLIS announced the election of the following officers: President, A. B. Davies (Stroud); Branch Council, G. Wayland Annum, C. Braine-Hartnell, H. Bramwell, Oscar Clark, W. Cox, E. C. Cripps, C. F. Cuthbert, T. S. Ellis, J. Howell, R. Kirkland, G. A. Peake, and J. G. Soutar, with P. Buchanan and R. Macartney from Forest of Dean Section and E. C. Carter as ex-President; Representative for Representative Meeting, H. Bramwell; Scrutineers, G. Wayland Annum and T. S. Ellis; Auditors, C. Braine-Hartnell and G. A. Peake; Ethical Committee, R. W. Batten, T. S. Ellis, O. H. Fowler, E. T. Wilson, and J. G. Soutar; Honorary Secretary, D. E. Finlay.

Financial Statement and Report.—The financial statement and report for 1908 was taken as read and passed.

Rural Nursing Associations.—A motion was read by the SECRETARY from Dr. W. Milligan as follows:

That no rural nursing association be recognized by members of the British Medical Association unless Rule 9 of the Queen Victoria's Jubilee Institute for Nurses (see *BRITISH MEDICAL JOURNAL*, April 3rd, 1909) be included among the rules.

Owing to the matter being under consideration by the Medico-Political Committee, it was proposed by Dr. A. CARDEW, seconded by Dr. SOUTAR, and carried, that the subject be adjourned for consideration at a future meeting.

Address.—Dr. W. ALDREN TURNER (London) gave a most interesting address on periodic conditions allied to epilepsy.

Vote of Thanks.—The PRESIDENT proposed a hearty vote of thanks to Dr. Turner, which was seconded by Dr. A. B. DAVIES, and carried.

Dinner.—Thirty-one members sat down to dinner at the Oriental Café.

LANCASHIRE AND CHESHIRE BRANCH:

BLACKBURN DIVISION.

THE annual meeting of this Division was held on Tuesday, May 18th, Dr. MACKLIN in the chair. There were also present: Drs. Moir, Aitken, Prebble, Arnold, Bannister, Jones, Taylor, Payne, Jamieson, and Henry.

Confirmation of Minutes.—The minutes of last meeting were read and confirmed.

Election of Officers.—The following were elected officers for the ensuing year: *Chairman*, Dr. Bannister; *Vice-Chairman*, Dr. Moir; *Secretary and Treasurer*, Dr. Greenwood; *Representatives on Branch Council*, Drs. Prebble and Henry; *Representative at Representative Meeting*, Dr. Prebble; *Executive Committee*, Drs. Aitken, Jones, Macklin, and Taylor.

Annual Report.—The annual report of the Division was read as follows and unanimously adopted: The number of meetings held during the year was five. The average attendance of members at these meetings was 13.2. The number of members of the Blackburn Division at the present time is seventy-two, compared with seventy-eight last year. The question of life insurance fees as included in the *BRITISH MEDICAL JOURNAL* was considered on May 15th, 1908. Dr. Aitken read a paper on Abdominal Surgery, with special reference to recent work, on September 16th, 1908. A meeting of the Executive Committee was held on January 30th, 1909, with reference to the Langho Epileptic Colony. Dr. Macklin read a paper on the Climatology of the Isles of Scilly on April 8th, 1909. On April 29th, 1909, Dr. Garstang gave an address on Some Questions in Medical Politics.

Annual Representative Meeting.—It was proposed and unanimously agreed—

That a meeting be held in June to instruct the Representative in the Representative Meeting, and that Drs. Prebble and Greenwood be asked to prepare a digest of the principal matters for discussion by the Representative Meeting at the annual meeting of the Association in Belfast.

Monthly Meetings.—It was resolved that monthly meetings of the Division be held from October to June inclusive.

Notice of Subjects for Discussion.—It was resolved that notice of any subject for discussion be placed on the agenda and that no other matters be discussed except by permission of the Chairman.

Vote of Thanks to Chairman.—A vote of thanks was accorded to Dr. Macklin.

BURNLEY DIVISION.

THE annual meeting of this Division was held in the Bull Hotel on Thursday, May 27th. There was a large attendance of members.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Honorary Secretary's Report.

THE HONORARY SECRETARY then presented his annual report as follows:

Mr. Chairman and Gentlemen.—Since the last annual meeting there have been so many meetings of the Division and so much done, that for me to give a detailed account of it would take up the whole evening. Therefore, with your permission, I will be very brief. Our Division is still a growing one. The membership has increased during the year from 54 to 62. The area of the Division includes Burnley,

Brierfield, Nelson, Padiham, Colne, Barnoldswick, and Earby. A proposition will be brought before you this evening, I believe, to invite Colne, Barnoldswick, and Earby to form a subsection of this Division amongst themselves for the purpose of holding meetings.

Amongst the matters raised during the year were: Questions of amalgamation of the Burnley Medico-Ethical Society with this Division. That was left in abeyance *pro tem.*, but the clinical sections of the Society and the Division combined and shared the expenses equally.

A question with the Education Committee concerning medical certificates to school children was settled. Another question, concerning the appointment of assistant medical officer of health and inspector of school children, proved a long and contentious business, which was happily settled.

A code of ethics was drawn up by a subcommittee, and approved by the whole Division, but not yet sanctioned by the Central Ethical Committee. The "Bradford Rules," with Rule Z, were adopted by the Division and sanctioned in London.

The matter which arose concerning the proposal to change the medical officer of the sanatorium was happily settled without the deputation, which was formed by this Division, being called.

The support of the Division was given to a member who rightly refused to give evidence in court without first being paid his fee.

Mention should also be made of the honour done to Burnley Division by the Lancashire and Cheshire Branch accepting an invitation to hold the Branch meeting here in 1910.

Amongst the matters referred to Divisions which we have considered are: The inspection of school children; the treatment of school children; the medical certification of patients for hospital treatment; fresh public medical institutions and enlargements of existing ones; representation of the local medical profession on boards of hospitals and similar bodies; the working of the Midwives Act; and many other matters.

During the past year there have been held ten Division meetings, with an average attendance of eighteen members. There have been thirteen Executive Committee meetings—average attendance of six members. That, gentlemen, indicates an enormous amount of medico-political work. Nor has the scientific side of our Association been forgotten, for during the winter months, conjointly with the Burnley Medico-Ethical Society, a splendid syllabus of clinics and addresses was prepared and gone through, to the edification of all those members who availed themselves of those useful meetings.

The social side, too, of our Division has manifested itself in the usual Burnley manner, with a picnic to Bolton Woods last summer, a hotpot in the winter, and a first-rate annual dinner this spring, when forty-two members showed their appreciation of the Division's care in that direction. Amongst the guests present were Drs. Drury, Garstang, and Larkin. The two latter gentlemen, I may remind you, are offering themselves for re-election to the Central Council, and our Division has given them its official nomination.

The finances of the Division are very low. This time last year there was a balance of £4 16s. 1d. At present there is cash in hand of £5 12s. 10d., but I have a bill to-day from the printers for the whole year which amounts to £6 10s. 7d. Then there is our share of the expenses in connexion with the clinical meetings. I believe the Branch, considering our energetic work, will help us in this direction if we have to apply for a special grant.

In conclusion, gentlemen, I have a letter from the Central Organization Committee informing us that this Division shall form an independent constituency for the electing of a Representative in Representative Meetings.

Election of Officers.—The following gentlemen were then elected office-bearers for the ensuing year: *President*, G. S. Pullon, M.D.; *Vice-President*, James M. Ferguson;

Honorary Secretary and Honorary Treasurer. A. Edward Bird; *Executive Committee.* Drs. W. J. D. Bromley, F. E. Crossley, H. Edmondson, James Gardner, Alex. Grant, James Howarth, A. P. Miller, H. J. Robinson, A. M. S.clair, and J. S. Wilson; *Branch Representative.* J. H. Watson, F.R.C.S.; *Representative for Representative Meetings.* Dr. Ferguson.

BURY DIVISION.

The annual meeting of this Division was held on May 25th in the Dispensary, Knowsley Street, Bury. Dr. GREENHALGH, Chairman, presiding. There were also present: Drs. Kerr, Cook, Nuttall, Deans, and Turnbull.

Confirmation of Minutes.—The minutes of the previous meeting were read and adopted.

Balance-sheet.—The balance-sheet for 1908 was passed on the motion of the CHAIRMAN.

Election of Office-bearers.—The following office-bearers for 1909-10 were then elected: *Chairman*, Dr. Deans; *Vice-Chairman*, Dr. Nuttall; *Representative on Branch Council*, Dr. Kerr; *Honorary Secretary*, Dr. Turnbull; *Executive Committee*, Dr. Johnson, Dr. Cook, Dr. Burnet, and Dr. Jelly.

Paper.—Dr. T. ARTHUR HELME of Manchester then read an instructive and practical paper on displacements of the uterus, for which he was accorded a hearty vote of thanks.

Adoption of Ethical Rules.—On the motion of Dr. GREENHALGH, seconded by Dr. A. P. NUTTALL, the model Ethical Rules were adopted *in toto*, with the provision that the Executive Committee should act as Ethical Committee.

LEIGH DIVISION.

The annual meeting was held on January 20th. Dr. H. S. HALL was in the chair, and fourteen members were present.

Confirmation of Minutes.—The minutes of the last meeting were read and signed.

Election of Officers.—The following officers were elected: *Chairman*, Dr. J. C. Beckett; *Vice-Chairman*, Dr. H. S. Hall; *Member of Branch Council*, Dr. F. E. Wynne; *Executive Committee*, Dr. M. J. Halton, Dr. F. P. Sturm, Dr. T. Gray, Dr. D. Elder; *Honorary Secretary*, G. H. Shaw.

Honorary Secretary's Report.

The SECRETARY'S report contained the following:

During the past session there have been eleven meetings. One was the annual meeting, one a conjoint meeting with the Wigan Division, one a special meeting, and eight were the usual monthly meetings.

In addition, the annual dinner took place on October 22nd, 1908, the members with their guests numbering 34. Also the annual cycle run took place on June 16th, 1908, when 10 members were present and several guests.

On November 19th, 1908, Dr. Garstang presented a report on the proceedings of the Central Council, and on December 17th, 1908, Dr. Blair presented the report on the Representative Meeting at Sheffield.

Dr. F. E. Wynne has been elected the Representative of the joint Divisions Wigan and Leigh at the Representative Meeting at Belfast.

During the year, Drs. Pickup, Robertson, Elder, and Sturm have been elected members.

Dr. Doyle has resigned, and Dr. MacLellan and Dr. Watkins have commenced practice in other districts.

The Division has a membership of 29 out of the total number of practitioners in the area of 32.

The average attendance at the meetings has been 12.4.

At eight of the meetings the following papers were read by members of the Division: Headaches, with cases. The electric ion treatment of medical conditions. Gunshot wounds, with vault of cranium showing interesting gunshot fracture. Local anaesthesia. The clinical symptoms of acetonuria. The nationalization of medicine. *Post-partum* haemorrhage. The surgical treatment of goitre and exophthalmic goitre, with cases. The use of alcohol in pneumonia.

LIVERPOOL NORTHERN DIVISION.

The annual meeting of this Division was held at the Liverpool Medical Institution on May 26th, Dr. A. IVOR THOMAS, Chairman, presiding. There were also present: Drs. Davies, German, Matthews, Richardson, Tisdall, and Cooke.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Election of Officers.—The following office-bearers were elected for the ensuing year: *Chairman*, S. Matthews, M.D.; *Vice-Chairman*, A. W. German; *Secretary and Treasurer*, J. A. Cooke; *Representative on Branch Council*, J. A. Cooke; *Representative at Representative Meeting*, S. Matthews, M.D., or if unable to attend, J. J. Tisdall; *Executive Committee*, H. Adcock, W. T. Blackledge, M.B., E. T. Davis, M.D., R. I. Richardson, M.B., A. I. Thomas, J. J. Tisdall; *Representatives on Joint Committee of Liverpool and Birkenhead Divisions*, E. T. Davies, M.D., S. Matthews, M.D., R. I. Richardson, M.B., A. Ivor Thomas, J. A. Cooke.

Matters Referred to Divisions.—It was resolved:

That the findings of the meetings of the combined Divisions of Liverpool and Birkenhead with respect to the matters referred to Divisions be approved.

Earlier Election of Representative at Representative Meetings.—It was resolved:

That in Rule 7 (Election of Representative) a period of nine months be substituted for three months.

Votes of Thanks to Retiring Officers.—Votes of thanks were accorded to the retiring Chairman, Dr. Ivor Thomas, and the retiring Secretary, Dr. A. W. German.

MANCHESTER (SOUTH) DIVISION.

The sixth annual general meeting of the Division was held at the house of the Chairman, Dr. Percy McDougall (Barcombe, Oak Drive, Fallowfield), at 3.45 p.m., on Thursday, May 27th, Dr. McDougall in the chair. There were eleven other members present: Drs. Vipont Brown, Cotterill, Grant Davie, Edlin, Godson, Gregory, Heathcote, Hopkinson, Russen Rhodes, Sawers Scott, and Stocks.

Apologies for Absence.—Letters of regret were received from Drs. Brook and Jordan.

Confirmation of Minutes.—The minutes of the last meeting were read and signed.

Correspondence.—A letter was read from Dr. Garstang, Honorary Secretary, Altrincham Division, offering to elect as an associate member of his Division the Honorary Secretary of this Division (Dr. Grant Davie) "as an act of courtesy to the Manchester South Division, as well as to himself." The Secretary was instructed to reply, on behalf of the Division, thanking Dr. Garstang for his kind offer.

Care of the Mentally Defective.—A reply was read from the Local Government Board acknowledging the receipt of the Division's letter of May 7th with reference to the recommendations of the Royal Commission on the Care and Control of the Feeble-minded, and the Royal Commission on the Poor Laws, in so far as they concern the mentally defective.

Election of Office-bearers for 1909-10.—The following office-bearers were unanimously appointed for the ensuing year, Drs. Gregory and Stocks being appointed scrutineers: *Chairman*, M. Russen Rhodes, L.R.C.P.; *Vice-Chairman*, Albert Hopkinson, M.B.; *Honorary Secretary and Treasurer*, G. H. Grant Davie, M.B.; *Representatives on Branch Council*, J. W. Boyd, M.B., E. Vipont Brown, M.D.; *Representative for Representative Meeting*, the Secretary; *Committee*, A. E. Cotterill, M.R.C.S. (Fallowfield), H. E. Edlin, M.R.C.S. (Levenshulme), T. A. Goodfellow, M.B. (West Didsbury), A. M. Mitchell Longsight, J. Simcock M.D. (Heaton Chapel).

Installation of New Chairman.—Dr. RusSEN RHODES then took the chair.

Representative at Annual Representative Meeting.—As no decision could be made regarding the Deputy Representative for the Representative Meeting, it was left to the Chairman and Secretary to find a substitute for election if Dr. Grant Davie was unable to attend the Belfast Meeting.

Representatives on Joint Committee.—Drs. Boyd, Vipont Brown, Grant Davie, Russen Rhodes, and Stocks.

Representative on Withington District Nursing Committee.—The Chairman (Dr. Russen Rhodes). The Secretary was requested to advise the Nursing Committee regarding the change in the representative.

Vote of Thanks to Past Chairman.—The CHAIRMAN then proposed a hearty vote of thanks to the past chairman, secretary, and past officers for the good work they had accomplished on behalf of the Division during their year of office. This was carried with acclamation.

ANNUAL REPORT OF EXECUTIVE COMMITTEE.

The SECRETARY read the annual report of the Executive Committee, which was as follows:

Number of Meetings.—Your Executive Committee has to report that during the year 11 meetings of the Division were held, at which there was an average attendance of 10, which is somewhat more than 12.5 per cent. of the total membership. The Committee itself met formally 10 times, and twice informally after general meetings. To show the increased activity of the Division, in which there are at present 79 members, the following figures are given for comparison:

Year.	Number of Division Meetings.	Average Attendance.	Number of Committee Meetings.
1904	2	8.5	2
1905	2	12	5
1906	2	13	5
1907	3	12	2
1908	5	13	8
1909	11	10	10+2

Character of Meetings.—Taking into account the quality and character of the business submitted for your consideration, your Committee deplores the sparse attendance of general practitioners in the area of the Division, for the several agenda placed before you at the general meetings have contained questions affecting markedly the interests of all local practitioners in respect to contract practice; the treatment of school children; the overcrowding of the profession; the ethical relationship between general practitioners and consultants; the recognition by public authorities of a representative body of the profession for their consultation and guidance in matters affecting the local profession generally; the appointment of a representative on a District Nurses' Committee; the working of the Midwives Act; many subjects of much medico-political interest sent down from the Central Offices; and last, but by no means least, clinical discussions on subjects that are of every-day concern to the general practitioner. Your Committee is strongly of the opinion that the Division will not be a powerful instrument for the defence, protection, and well-being of its members unless they are willing to meet together to fully discuss and act in unison upon the questions submitted for their consideration. Your Committee feels strongly that this unity of thought and action in all public questions affecting the honour and interests of the profession cannot be over-estimated at the present time, when there is so much subletting and cutting into the legitimate work of the practitioner. It therefore earnestly appeals for a more general active interest to be taken by the members in the coming session, and thus augment the numbers of the "ever faithful" who have done excellent work during the past year. The social element, however, has not been lacking, and your Committee, on behalf of the Division, heartily thanks those members who so kindly and hospitably entertained the Division at the meetings held at their respective houses.

Medical Inspection and Treatment of School Children.—These subjects were of such importance that their consideration occupied three meetings. Regarding "inspection," the Division disapproved of payment per head, and approved of full-time medical officers who should be appointed without reference to time, and subject to reasonable notice, the appointment only being terminable with the consent of the Board of Education. It also resolved that teachers should themselves be trained to observe indications of ill health in

children under their care, and should forthwith bring these children to the notice of the proper medical authority. This resolution was sent to the joint committee, which adopted it, and forwarded it to the other four local Divisions for their consideration. With regard to "treatment," it was resolved that children whose parents could pay for such treatment should be referred to their own medical attendant; that any attempt by public authorities to arrange for the treatment of school children at hospitals and other charitable institutions was thoroughly unsound in principle and should be condemned; that school clinics should be established where treatment should be undertaken by whole-time medical officers, whose salary should be in accordance with the rate fixed by the Association; and that in every district a wage limit should be fixed, and no treatment at the expense of the education authority should be given to the children of parents whose income exceeds the local limit. These questions will be carefully considered by the Representative Meeting at Belfast.

New Rule regarding Contract Work.—This year the new rule that "no new club should be accepted at a less remuneration than 6s. per member per annum" came into operation. Several clubs have been raised to this standard, but your Committee regret to record one failure where a newcomer but non-member of the Association, after first promising to compete on the higher scale with the other practitioners concerned, accepted the club at a lower rate. Your Committee requests members to inform the Secretary of the Division of any approaching fresh club appointment, when occasion arises, where there is likelihood of difficulty in obtaining the increased fee, whether the applicants are members or non-members of the Association.

Manchester and District Warehousemen and Clerks' Association.—In your last annual report mention was made of the unsatisfactory nature of the medical arrangements of this association, which the Division had thoroughly investigated. A resolution was adopted and forwarded to the joint committee strongly recommending it to do its utmost to secure the resignation of the medical staff, including the consultants. This year the Central Contract Practice Subcommittee has interested itself in the matter, and on March 16th it circulated every member of the profession resident in Manchester asking for information. Your Committee has reason to believe that the replies are regarded at the Central Offices as satisfactory, and will in all probability enable a move being made to attempt to ameliorate some of the existing hardships under which the medical officers of the association labour.

Ethical Relationship between the General Practitioner and Consultant.—A request from the Division to the Joint Committee to consider this question has resulted in a large committee being appointed, comprising six representatives (three consultants and three general practitioners) from each Division in Manchester and Salford. This committee is at present doing useful work, and the outcome of its deliberations, from which much good must result, will be placed before you in due course.

Appointment of a Representative upon the Withington Ladies' District Nurses' Committee.—Your Committee has succeeded in gaining this appointment, and considers it essential that official representation should be obtained on all similar organizations whereby the lay executive bodies may properly be kept in touch with the professional, and thus be prevented from blundering in medical matters. It would be glad to hear from members regarding other societies in the area of the Division upon which similar representation should be sought.

Medical Profession as a Career.—An important letter originated from your Committee on this subject. It obtained the co-operation of the Joint Committee and emanated from it as a "letter of warning," calling the attention of head masters of schools in Lancashire and Cheshire to the overcrowded state of the profession and the low average income of the general practitioner, estimated by the BRITISH MEDICAL JOURNAL at £200 to £250 a year. It is hoped this will prevent students from embarking upon a medical career in complete ignorance of the economic crisis in the profession of medicine.

Address by Dr. Garstang.—The Division is indebted to Dr. Garstang, Altrincham, for coming before it as one of its representatives on the Central Council and giving an

instructive account of the working of the executive body of the Association. He also defined the policy of himself and colleagues, which the Division heartily approved.

Recognition by Public Authorities of a Local Representative Body of the Profession.—This subject is of great importance when questions arise in municipal and other public matters, whereby an authoritative opinion is required representing the general feeling of the profession, such for example as was obtained regarding the carrying out or holding in abeyance of clauses affecting the profession in the Registration of Births Act. Your Division approached the Joint Committee by means of a resolution. The subject was then taken up by the West Division, with the result that the Joint Committee resolved to approach public authorities with the object of its appointment as the authoritative representative body of the profession in Manchester and Salford. This has been done, and the Joint Committee has already been approached for its opinion from one of the departments in the Town Hall on the subject of unqualified practice in Manchester and district.

Medico-Political Communications from the Central Offices.—These subjects have appeared on the various agenda submitted to you. They have been given due consideration by the Division, and results of these deliberations have been published in the SUPPLEMENT of the JOURNAL from time to time.

Ethical Cases.—Your Committee has considered two ethical cases. One case has been referred to the Branch Council for it to attempt a satisfactory settlement after much care and time had been expended on it. The other case remains *sub judice*. Besides these a member has sought advice regarding a club appointment. This has been given him.

Riders by Coroners' Juries.—In May, 1908, your Committee approached the central authorities with the object of action being taken by the Association to try to prevent the occurrence of these frequently undesired censures upon medical men who, under the circumstances, were wholly blameless. Your Committee is now pleased to report that at the last Representative Meeting at Sheffield the following minute was approved (700):

That the Council be instructed to approach the Lord Chancellor to obtain, if possible, juster and more uniform procedure in relation to riders to verdicts by coroners' juries.

Scientific Discussions.—During the past session there have been three scientific discussions after the reading of short papers. They have proved to be one of the popular features of our meetings, and have been interesting from the fact that on each occasion every member present has taken an active part in them. These meetings have served two useful purposes, for not only has helpful mutual experience been freely related on subjects of common interest in routine work, but the healthy and much-to-be-desired feeling of *esprit de corps* has been engendered among the members who have attended and taken part. Your Committee, therefore, feels that these discussions should become an important part of the work of the Division, and should be effectively supported.

Place of Meeting.—On several occasions your Committee has considered the "place of meeting" that would be most convenient for the majority of members to attend. The Division is a scattered one, including as it does the following districts: Rusholme (to High Street), Fallowfield, Withington, Didsbury, Longsight, Levenshulme, Heaton Chapel (in part), Heaton Mersey, Gorton, Fairfield, and Wilmslow. In recent times meetings have been held in Longsight, Fallowfield, and Withington, for in these districts the larger proportion of members reside. Early next session the Division will be given an opportunity to discuss if a central meeting place in town would be most convenient to enable all to attend, though it has always been the feeling of your Committee that the meetings should be held in the area of the Division. When the subject is placed on the agenda your Committee sincerely hopes that members residing in outlying districts interested in the work of the Division will attend and give their opinion. "Distance" will then be no adequate excuse for non-attendance.

British Medical Journal Supplements.—Your Committee wishes to impress upon all members the necessity of reading and preserving the SUPPLEMENTS of the JOURNAL.

Not only will they thus keep in touch with the work of their own Division, but they will be enabled to take an intelligent interest and part in the discussion of medico-political matters.

Retirement of Dr. Savers Scott from the Executive Committee.—Your Committee regrets to record Dr. Savers Scott's approaching retirement from its active list. Only those who have had the pleasure of working with Dr. Savers Scott can appreciate the high nature of the services he has rendered to the Division. His initiative and inspiration have always been a trustworthy source upon which to rely. He has been actuated by the most unselfish motives in withdrawing his name, for he feels, having served the Division on its executive body for six continuous years, that it is time for his place to be occupied by a new member, and thus allow a fresh element of blood to be infused into the official work. In this way he considers that in all probability more members may be brought to take an active interest in the work of the Association. Your Committee trusts his retirement may be only of a temporary nature, and that his desire may be fulfilled to the uttermost.

M. RUSSEN RHODES, Chairman.

G. H. GRANT DAVIE, Honorary Secretary.

The report on being put to the meeting was adopted unanimously.

Letter to Contract Practice Subcommittee.—Arising out of the report, the Secretary was instructed to write to the Contract Practice Subcommittee regarding the Warehousemen and Clerks' Association, drawing its attention to the fact that though the grievance against its medical arrangements was one of old standing, nevertheless nothing effectual had yet been done; also to impress upon it the importance and urgency of the matter, which is one of the chief factors in maintaining the present low club rates generally in vogue in the district.

Local Government Board and Unqualified Practice.—With reference to the letter recently issued from the Local Government Board (April 23rd, 1909) to medical officers of health re practice of medicine and surgery by unqualified persons, of which mention was indirectly made in the report, the Secretary was instructed to write to the Medical Secretary pointing out that in the opinion of this Division medical officers of health solely in virtue of their office were not the proper persons to apply for such information, for the reason that this subject did not come under their province—especially so in the case of whole-time medical officers, who might be in complete ignorance of the prevailing state of unqualified practice; also to suggest that immediate steps be taken by the Association to approach the Local Government Board to have such an inquiry conducted through the channels of the Divisions of the British Medical Association, for the foregoing reason, when full and comprehensive reports of local conditions of unqualified practice throughout the country could then be obtained.

Treasurer's Report.—The Financial Report of the Treasurer was then taken and unanimously adopted. It was pointed out that, owing to the past year being one of greatly increased activity—the number of meetings held being more than twice as many than in the best previous year—the expenditure had proportionately increased, leaving a balance of only 17s. 3d. to carry on the work for the ensuing seven months of the year. It was proposed and carried that the Branch Council be approached for a supplementary grant.

Alteration of Rule 7.—It was agreed that Rule 7 of the Division Rules should be altered as follows:

... the Representative shall be elected by a general meeting of members of the constituency held not more than nine months nor less than three weeks before the Annual Representative Meeting.

Address by Dr. Savers Scott.—Dr. SAVERS SCOTT gave an interesting review of the current work of the Association, and pointed out how desirable it was that every member of the profession should become a member of the Association.

Date of Next General Meeting.—The date upon which this meeting should be held to give final instructions to the Representative was left for the Committee to fix.

Reprints of this Report.—It was moved and seconded that the Secretary be requested to forward the report of

this meeting, including the annual report, for publication in the SUPPLEMENT, and that he obtain 150 reprints for circulation among both members and non-members within the area of the Division.

This concluded the business.

ST. HELENS AND WARRINGTON DIVISIONS.

A JOINT meeting of the St. Helens and Warrington Divisions was held on May 25th at 4.15 p.m. at Liverpool, in the North-Western Hotel. There were present: Drs. Joseph, Burrows, Murray, Bassett, Kerr, Merrick, Paterson, Wilson, and Buchan. It was resolved that Dr. Joseph should take the chair.

Apologies for Non-attendance.—Apologies for absence were intimated from Drs. Edwards, Bowden, Brebner, and Reid.

Representative at Representative Meeting.—It was resolved that Dr. Bassett be appointed the Representative of the two Divisions at the Representative Meeting.

Salary of Medical Officers of Health.—It was resolved that the Representative bring before the Representative Meeting the following motion:

"That the Association considers that the minimum salary of assistant medical officers of health should be £250 a year.

METROPOLITAN COUNTIES BRANCH:

CITY DIVISION.

The annual meeting of this Division was held at the Great Eastern Hotel, Liverpool Street, E.C., on Thursday, May 20th, at 3.30 p.m. Dr. GOODALL presided, and there were ten members present.

Confirmation of Minutes.—The minutes of the previous general meeting were read, confirmed, and signed by the Chairman.

Election of Officers of Division.—The officers of the Division for the ensuing year were then elected as follows: *Chairman*, Dr. A. Withers Green; *Vice-Chairman*, Dr. E. A. Lermitt; *Representatives on Branch Council*, Drs. J. W. Hunt, E. W. Goodall, and the Honorary Secretary; *Honorary Secretary and Treasurer*, Dr. C. R. Salisbury; *Assistant Honorary Secretary*, Dr. F. H. Wallace; *Executive Committee*, Drs. T. L. Brown, F. J. P. Daly, J. L. Dick, M. Greenwood, C. F. Hadfield, G. B. Hicks, J. I. Jaffé, G. H. Johnston, J. H. Porter, David Ross, Montague Smith, A. J. Southcombe, Frederick Wallace, and Elizabeth Wilks; *Representative at Representative Meetings*, Dr. Goodall was elected Representative of the Division in Representative Meetings, and Dr. F. Wallace deputy.

Report of Executive Committee.—The annual report of the Executive Committee, which had previously been circulated amongst the members, was passed unanimously.

Nomination of Officers of Branch.—The following gentlemen were nominated as officers of the Branch: *President-elect*, Dr. Lauriston Shaw; *Vice-Presidents*, Dr. Major Greenwood and Mr. Atwood Thorne; *Honorary Secretary*, Dr. E. W. Goodall; *Honorary Treasurer*, Mr. H. Betham Robinson; *Representatives of Branch on Central Council*, Dr. G. E. Haslip, Sir Victor Horsley, and Drs. Hugh Kerr, Lauriston Shaw, and Frederick Wallace.

Earlier Election of Representative.—It was unanimously resolved that Rule 7 of the Division, re election of Representative, be altered from "... not more than three months to less than three weeks ..." to "... not more than nine months."

Instruction to Representative at Annual Representative Meeting.—The business of the annual meeting was then discussed, and the Representative was instructed to use his discretion in voting, bearing in mind the feeling of the Division on those questions which have been discussed in previous meetings.

Vote of Thanks to Retiring Chairman.—The meeting then terminated with a vote of thanks to the retiring Chairman.

KENSINGTON DIVISION.

A MEETING of this Division was held at the Kensington Town Hall on Wednesday, May 12th, at 5 p.m. Dr. RICE OXLEY, the Chairman presided, and thirty members and visitors were present.

Confirmation of Minutes.—The minutes of the previous meetings were read and confirmed.

Whole-time Medical Officers of Health.—On this subject it was resolved:

That medical officers of health should be debarred from private practice provided the income paid by the authority was adequate.

The meeting was unanimous that wherever possible this should be done.

Midwives Act: Departmental Committee.—Dr. PARKER YOUNG announced that he was giving evidence before the Committee shortly, and would be glad to receive suggestions from any members of the Division.

Federated Societies' Medical Benefit Association.—In regard to this question it was resolved that:

In the opinion of this Division it is extremely undesirable that any member of the profession should associate himself with the scheme.

Medical Certification of Suitability for Hospital Treatment.—The resolution was unanimously agreed to.

Contributions to Hospitals by Employers and Employees.—On this subject it was resolved:

That this Division absolutely disapproves of the suggestion contained in the two resolutions that contributions to hospitals should be considered in any way as premiums.

Fresh Public Medical Institutions.—The Division reiterates its approval of this resolution.

Sanatoriums for Workers Suffering from Tuberculosis.—The Division approved of the statement made, and the resolution passed by the Representative Meeting.

Representation of Local Medical Profession on Hospital Boards.—On this subject it was resolved:

That the resolutions be referred to the Executive Committee for consideration and report.

Conference with Friendly Societies, Dispensaries, etc.—The Executive Committee reported that they had appointed a subcommittee to arrange a conference with the secretaries of the friendly societies, provident dispensaries, and out-patient departments of hospitals within the area of the Division for the purpose of ascertaining if some course of action cannot be undertaken to co-ordinate the various services and prevent overlapping and abuse. After considerable discussion, it was resolved:

That it is advisable that in the area of the Kensington Division a public medical service be formed for the organization of the provision of medical and surgical attendance on weekly wage-earners.

MIDLAND BRANCH:

BOSTON AND SPALDING DIVISION.

An ordinary meeting was held at the White Hart Hotel, Boston, on April 20th, at 2.45 p.m., Dr. MASON in the chair. There were also present: Drs. Moxham, Pilcher, Slocock, Smith, Walker (Holbeach), and Wilson, and Dr. Stanley Green of Lincoln.

Apologies for Non-attendance.—Regrets at non-attendance were received from many members.

Paper.—Dr. STANLEY GREEN read an interesting paper entitled, *Some Sore Throats*. The subject was exhaustively dealt with and listened to intently. It was a matter for deep regret that so few members were able to be present. He also showed some beautiful radiographs of diseased bones.

Vote of Thanks.—The CHAIRMAN proposed and Dr. SLOCOCK seconded a cordial vote of thanks to Dr. Green for his instructive paper and excellent radiographs, which was carried with acclamation. Dr. Green had tea with the members afterwards.

LINCOLN DIVISION.

The annual meeting was held on May 20th, at the Guildhall, Lincoln, Dr. GENNEY being in the chair.

Election of Officers.—The following were elected officers for the ensuing year: *Vice-President of Midland Branch*, Dr. Genney; *Chairman*, Dr. Carline; *Vice-Chairman*, Dr. Denney; *Representative on Branch Council*, Dr. Carline; *Executive Committee*, Dr. McFarland, Dr. Coleman, and Dr. Howes; *Honorary Secretary and Treasurer*, Dr. Chater; *Representative in Representative Meetings of the Association*, Dr. McFarland; *Deputy Representative*, Dr. Carline.

Medical Certificates of Suitability for Hospital Treatment.—The proposal

That a medical certificate of suitability for hospital treatment be required as a condition of hospital treatment, except in cases of casualties,

was considered and adopted.

Contributions to Hospitals by Employers and Employees.—The report on contributions to hospitals by employers of labour and employees was then brought forward, but no opinions thereon were given.

Fresh Medical Institutions.—The following statement was approved:

That it is desirable that no fresh public medical institution should be opened without previous consultation with the local medical profession through some organized body such as the Divisions of the British Medical Association in the area of which it is proposed to establish such new institution, and that it be an instruction to the Council to give effect to this principle in considering applications by Divisions or Branches for support in dealing with hospital questions.

Sanatoriums for Tuberculous Workers.—The statement referred to Divisions regarding sanatoriums for workers suffering from tuberculosis was read, but no resolution thereon made.

Whole-time Medical Officers.—The reply to the question, "Should health officers give their whole time to the work?" was in the affirmative.

Payment for School Inspection.—It was proposed and carried that the Division approves of payment per head in school inspection, providing the payment is adequate.

Earlier Appointment of Representative.—The suggestion of the earlier appointment of the Representative in Representative Meetings was approved of, and the Secretary directed to ask leave to amend Rule 7 of the Divisional Rules, so that Article XXVII of the Articles of Association of the Association shall read "nine months" instead of "three months."

Doctors and Midwives.—Inquiry of members was made as to whether any boards of guardians in the area of the Division did circularize the members of the profession and the midwives with regard to payment of the former when called in to assist the latter. None had any knowledge as to its having been done. To the question,

Did they offer to pay fees in suitable cases to all medical practitioners, or did they restrict the offer to cases where the parish medical officers were called in?

the answer was, No. It was then asked,

If the payment of medical men in these cases has been undertaken by any local authority other than the guardians, will you kindly furnish particulars?"

The answer was unanimously, "It has not as far as we know."

Representation of Local Medical Profession on Hospital Boards.—The meeting considered that the staffs of hospitals should be represented on the boards of management of the hospitals.

Scientific Work of Divisions and Branches.—The paper relating to scientific work of Divisions and Branches received from the Medical Secretary was brought before the members.

Medical Inspection of School Children.—The report published in the BRITISH MEDICAL JOURNAL of May 15th as to medical inspection of school children was not gone into.

The proceedings then terminated.

**NORTH LANCASHIRE AND SOUTH WESTMOR-
LAND BRANCH:
LANCASTER DIVISION.**

The annual meeting of this Division was held at Lancaster on May 22nd.

Election of Officers.—The following were elected officers for the ensuing year: *Chairman*, Dr. T. G. Mathews, Kirkby Lonsdale; *Vice-Chairman*, Dr. James Aitken, Lancaster; *Secretary*, Dr. Watts Edmondson, Sea View, Lancaster; *Representative to the Representative Meeting*, Dr. David Blair, County Asylum, Lancaster; *Representatives on the Branch Council*, Drs. Mathews and Edmondson; *Members of Committee*, Drs. Hall, Gibson, Graham, Smith, and Stott.

PERTSHIRE BRANCH.

A special meeting of the Branch was held in the Perth Infirmary on Friday, May 21st, at 3.30 p.m. There were present: Drs. Kennedy, Moffett, P. Stewart, Blair, Lyell, Trotter, J. Hume, and Taylor. On the motion of Dr. Trotter, Dr. Kennedy took the chair.

Apology.—An apology was intimated from Dr. D. H. Stirling.

Whole-time Medical Officers of Health.—On this question the finding of the meeting was:

That medical officers of health should be debarred from engaging in private practice where practicable.

Medical Certification of Suitability for Hospital Treatment.—On this matter the recommendation of the Sheffield meeting was agreed to.

Contributions to Hospitals by Employers and Employees.—On this question no decision was come to, as the Branch thought this more an administrative question.

Fresh Public Medical Institutions.—The recommendation on this subject was agreed to.

Sanatoriums for Tuberculous Workers.—In regard to the National Association for the Establishment and Maintenance of Sanatoriums for Workers suffering from Tuberculosis, the recommendation was agreed to.

Representation of Local Medical Profession on Hospital Boards.—The recommendation on this subject was approved on the lines of the annual meeting at Sheffield.

Vote of Thanks to Chairman.—This was all the business, and a vote of thanks was accorded Dr. Kennedy for presiding.

SHROPSHIRE AND MID-WALES BRANCH.

The thirty-third annual spring meeting of the Branch was held at the Salop Infirmary on Tuesday, May 25th, at 3 p.m., Dr. LYTLE, the President, in the chair. There were thirty-two members present.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Report of Council.—The report of the Council for the previous year was read by the HONORARY SECRETARY, and was as follows: The Council have met on five occasions during the year 1908. Four of these were meetings where the ordinary business of the Branch was transacted, and the fifth was a special meeting to consider a special report from the Medico-Political Committee in London with reference to the medical inspection of school children. A subcommittee was formed, and this committee reported to a special general meeting of the Branch held in January, 1909, when important resolutions were passed. The Honorary Secretary has had two communications from head quarters recently with reference to the expenditure of the Branch. Exception has been taken to the Branch subscribing 3 guineas a year each to the Royal Medical Benevolent Fund and Epsom College; also exception has been taken to the Branch entertaining three guests at the annual medical dinner, as well as to other minor payments in connexion with the same meeting. With regard to this the Council would point out that these expenses have been incurred annually for nearly twenty years, and it seems a little late to demur to these items; but the General Secretary in London has pointed out in a letter to the Branch Secretary that the Articles of the Association preclude the funds being used for these purposes. Under these circumstances the Council have regretfully acquiesced in the decision. The membership of the Branch is exactly the same as a year ago—namely, 132. The financial position of the Branch continues in a satisfactory state. The total income was £43 0s. 9d., and the expenditure £17 8s. 1d., leaving a balance in hand of £25 12s. 8d. The adoption of the report was proposed by the PRESIDENT, seconded by Dr. LAW WEBB, and carried unanimously.

Election of Officers.—The election of the following members for the various offices in the ensuing year was proposed by Dr. CUTHBERT, seconded by Dr. BOON, and carried unanimously: *President*, Dr. Hale Puckle; *Vice-President*, Dr. Lytle; *Chairman of Clinical and Pathological Section*, Dr. Law Webb; *Representative at Representative Meeting*, Mr. George Sidebotham; *Representative on Central Council*, Dr. Cureton; *Council*, Messrs. Willoughby Gardner, M.D., Charles Gwynn, M.D., Arthur Jackson, F.R.C.S., George Keyworth, M.B., John Lloyd, M.R.C.S.,

Justin McCarthy, M.D., Harold Macleod, F.R.C.S., William Packer, M.D., F. K. Pigott, Alan Rigden, M.D., Law Webb, M.D., and Russ Wood, F.R.C.S.; *Honorary Secretary and Treasurer*, Reginald Murck, M.D.; *Assistant Honorary Secretary*, C. V. Bulstrode, M.D.

Vote of Thanks to Honorary Secretary and Treasurer.—The President proposed and Dr. Pigott seconded a hearty vote of thanks to Mr. Russ Wood for his services as Honorary Secretary and Treasurer during the past three years. Mr. Russ Wood returned thanks to the meeting for their kind resolution.

Business Management of the Association.—Dr. CURETON then moved the following resolution:

That in view of the practical experience of the last thirty-seven years, during which period the Association has enjoyed great financial prosperity, it has been proved that in the best interests of the British Medical Association it is essential to have an official with the rank and status of "General Secretary and Manager," and that such official should possess special business training.

Further, that, having regard to the highly satisfactory manner in which Mr. Guy Elliston has discharged the duties since his appointment in 1902, it is in the interests of the Association that his services should be retained as "General Secretary and Manager"; and that the Representative of the Shropshire and Mid-Wales Division to the Representative Meeting at Belfast be instructed accordingly.

This was seconded by the President, supported by Dr. WHITE, Sir JAMES BARR, and Dr. MCCARTHY, and carried unanimously.

Paper.—Sir JAMES BARR then read an able and exhaustive address on the treatment of chronic degenerative lesions of the heart and aorta, which will be published in the JOURNAL. At its conclusion a hearty vote of thanks was proposed by the President, seconded by Dr. PUCKLE, and carried unanimously. Sir JAMES BARR suitably replied.

Tea.—At the conclusion of the meeting the President entertained those members present at tea.

SOUTH-EASTERN BRANCH:

FOLKSTONE DIVISION.

The annual meeting of the Folkstone Division was held at Hotel Wampach, on Saturday, May 29th, at 8.45 p.m., Dr. FITZGERALD being in the chair.

Confirmation of Minutes.—The minutes of the last annual meeting were read and confirmed.

Report of Executive Committee.—The report of the Executive Committee was received and adopted.

Report on Ophthalmia Neonatorum.—The conclusions and recommendations of the Committee of the Association on Ophthalmia Neonatorum were considered and approved.

Election of Officers.—The following officers were elected: *Chairman*, Dr. W. F. Chambers; *Vice-Chairman*, Dr. Wainwright; *Representative at Representative Meetings*, Dr. P. Vernon Dodd; *Representative on Branch Council*, Dr. Eastes; *Executive Committee*, Drs. Fitzgerald, Barrett, and Wilgess; *Honorary Secretary*, Dr. P. Vernon Dodd.

GUILDFORD DIVISION.

The annual meeting of the Division was held at the Royal Surrey County Hospital, Guildford, on Wednesday, May 26th, at 4.30 p.m., Dr. ANDERSON MORSHEAD being in the chair.

Confirmation of Minutes.—The minutes of the last two meetings were read and confirmed.

Election of Officers.—The following were elected officers for the ensuing year: *Chairman*, Dr. A. Hope Walker; *Vice-Chairman*, Dr. F. K. Weaver; *Representative on Branch Council*, Dr. A. B. Hudson; *Representative at Representative Meetings*, Dr. E. J. Smyth; *Honorary Secretaries*, Dr. H. B. Butler, Dr. E. J. Smyth; *Executive Committee*, Drs. Kendall, Kingsford, Morshead, Parker, Pearse, Sheaf, Sloman, and Winstanley.

Annual Report.—The annual report and balance sheet of the Division were presented by the HONORARY SECRETARY, and unanimously adopted.

Proposed Division of South-Eastern Branch.—The following proposal of the Brighton Division was considered:

That the South-Eastern Branch be divided into two smaller Branches, one to consist of that part of Kent which is already in the South-Eastern Branch, and the other of the

county of Sussex and so much of the county of Surrey as is already part of the Branch.

On being put to the vote the numbers were as follows: In favour 6; Against 0. Six members did not express any opinion.

Medical Inspection and Treatment of School Children.—The report of the Medico-Political Committee on this subject was then considered, and it was resolved:

That this Division approves of the recommendations of the Medico-Political Committee now issued to the Divisions in relation to the medical inspection of school children and treatment of those found defective, and especially disapproves of the latter being drafted on to medical charities, or referred to the Poor Law as at present constituted.

Whole-time Medical Officers of Health.—It was resolved that the Division express itself in favour of such appointments.

Reports from Hospitals and Medico-Political Committees.—Time did not allow of a detailed consideration of these reports, but a general approval of their tenor was expressed by members.

Papers, etc.—Dr. B. H. KINGSFORD read notes of a case of intestinal obstruction due to an impacted gall stone, and showed the specimen. Mr. H. B. BUTLER referred to a case which had recently been under his care, in which he had removed a number of stones from the gall bladder and in which 2 or 3 pints of bile were found in the peritoneal cavity at the time of operation. Several questions were asked by the CHAIRMAN and other members, to which Dr. KINGSFORD replied.

Report on Ophthalmia Neonatorum.—Mr. E. J. SMYTH called attention to some of the principal points in the report recently issued by the Special Committee on Ophthalmia Neonatorum, and it was unanimously resolved:

That this Division approves of the suggestions made in the report of the Committee in relation to the prevention of ophthalmia in new-born children, and especially considers it desirable that it should be made a notifiable disease under the Public Health Acts.

Vote of Thanks.—The meeting closed with a vote of thanks to the committee of the hospital for the use of the board room and for kindly providing tea.

HASTINGS DIVISION.

The annual meeting of the Hastings Division was held on Friday, May 28th, at the Eversfield Hotel at 4.15 p.m. Mr. F. W. S. CULHANE (Chairman) not being present, Dr. E. KAYE-SMITH took the chair. Eight members were present.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Election of Officers.—The following members were elected as officers for the ensuing year: *Chairman*, Dr. E. Kaye-Smith; *Vice-Chairman*, Dr. Hill-Joseph, Bexhill-on-Sea; *Honorary Secretary*, G. V. Hewland, M.D., 4, Eversfield Place, St. Leonards-on-Sea; *Representative for Representative Meeting*, Dr. E. Kaye-Smith, St. Leonards-on-Sea; *Representative on Branch Council*, Dr. J. W. Batterham; *Executive Committee*, Drs. G. A. Ballingall, A. W. Brodribb, F. W. S. Culhane, J. Farran Fry, Thomas Redmayne.

Representative at Annual Representative Meeting.—It was resolved that in the event of Dr. Kaye-Smith not being able to be present at the annual meeting of the Association in Belfast as Representative for Representative Meetings, the Chairman and Secretary shall be able to appoint a substitute.

Whole-time Medical Officers of Health.—A letter from the Medical Secretary was read re whole-time medical officers of health. It was proposed by Mr. FARRAN FRY and seconded by Dr. ALLFREY:

That all towns of 50,000 inhabitants or more should have a whole-time medical officer of health, and that his tenure of office should not be determined except with the consent of the Local Government Board.

SOUTHERN BRANCH:

PORSMOUTH DIVISION.

At a meeting of the Division held at 5, Pembroke Road, Portsmouth, on May 14th, at 3.30 p.m., Dr. W. CARLING in the chair, there were also present Drs. L. K. H.

Blackman, E. J. Biden, R.N., L. Maybury, A. Milne Thomson, T. A. Colt, J. G. Blackman, J. Phillips, J. Ward Cousins, and B. H. Munby.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Matters Referred to Divisions.

Various matters referred by several committees of the British Medical Association were considered.

Whole-time Medical Officers of Health.—The question referred by the Public Health Committee as to the desirability of health officers being required to give their whole time to the work was discussed. The Executive recommended the Division to pass the following resolution:

That in the opinion of this Division medical officers of health should be debarred from engaging in private practice wherever practicable [SUPPLEMENT, BRITISH MEDICAL JOURNAL, January 3rd.]

It was proposed by Dr. L. MAYBURY and seconded by Dr. HACKMAN that the above recommendation should be adopted. Carried *nem. con.*

Medical Certification of Suitability for Hospital Treatment.—On the report on medical certification of suitability of patients for hospital treatment (SUPPLEMENT, BRITISH MEDICAL JOURNAL, February 27th), it was proposed by Dr. L. MAYBURY and seconded by Dr. T. A. COLT:

That a medical certificate of suitability for hospital treatment be required as a condition for hospital treatment, except in the case of casualties.

Carried unanimously.

Contributions to Hospitals by Employers and Employees.

—The report on contributions to hospitals by employers of labour and employees (SUPPLEMENT, BRITISH MEDICAL JOURNAL, February 27th), referred by the Hospitals Committee, was considered. It was proposed by Dr. BLACKMAN and seconded by Dr. HACKMAN:

That paragraph 150 (a), instead of standing in the report, be as follows:

That the contributions to hospitals by employers of labour and employees by means of weekly subscriptions and otherwise should not be considered as entitling the contributors to unlimited hospital or gratuitous medical attendance as at present seems to be claimed.

Carried unanimously.

It was proposed by Dr. HACKMAN and seconded by Dr. BIDEN:

That paragraph 150 (b) be rejected.

Carried unanimously.

Fresh Medical Institutions.—On the question as to fresh medical institutions, referred by the Hospitals Committee, it was proposed by Dr. J. PHILLIPS, seconded by Dr. MILNE THOMSON, and carried unanimously:

That it is desirable that no fresh public medical institution should be opened without previous consultation with the local medical profession, through some organized body, such as the Division of the British Medical Association in the area of which it is proposed to establish such new institution, and that it be an instruction to the Council to give effect to the principle in considering applications from Divisions for support in dealing with hospital questions.

Sanatoriums for Tuberculous Workers.—On the question as to sanatoriums for workers suffering from tuberculosis, it was proposed by Dr. MAYBURY, and seconded by Dr. BLACKMAN, and carried:

That Section 3, Subsection (a) be approved.

It was proposed by Dr. GREEN, seconded by Dr. HACKMAN, and carried:

That Section 3, Subsection (b), be approved, but amended as follows: That in line 6 delete the words "at the discretion of," replacing them with the words, "in consultation with."

It was proposed by Dr. J. PHILLIPS, seconded by Dr. HACKMAN, and carried:

That Section 3, Subsection (c), be approved.

Representation of Local Profession on Hospital Boards.

—With regard to the question as to representatives of the local medical profession on boards of hospitals and similar bodies, it was proposed by Dr. BLACKMAN, seconded by Dr. J. GREEN, and carried *nem. con.*:

That the action taken by the Hampstead and Wandsworth Divisions be not supported.

To ensure the insertion of notices in this column, they must be received at the Central Offices of the Association not later than the first post on Tuesday.

Association Notices.

ANNUAL GENERAL MEETING.

Notice is hereby given that the 1909 Annual General Meeting of the British Medical Association will be held in the Assembly Hall, Belfast, on Friday, July 23rd, at Twelve noon.

[This Meeting is to comply with Article XII, and will adjourn forthwith until Tuesday, July 27th, at 2.30 o'clock.]

ANNUAL REPRESENTATIVE MEETING.

Also, notice is hereby given that the 1909 Annual Representative Meeting will be held in the Assembly Hall, Belfast, on Friday, July 23rd (and following days as required), immediately after the Annual General Meeting, fixed for Twelve noon, on Friday, July 23rd.

BY ORDER OF THE COUNCIL,

GUY ELLISTON.

May, 1909.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BATH AND BRISTOL BRANCH: BATH DIVISION.—The annual meeting of this Division will be held at the Royal United Hospital on Saturday, June 26th, at 6.0 p.m. Business: (1) To elect officers. (2) To receive annual report. (3) To consider business of Annual Representative Meeting. (4) To consider matters referred to Divisions (see SUPPLEMENT to BRITISH MEDICAL JOURNAL, May 8th). (5) To modify Divisional Rule No. 7, for ensuring earlier appointment of Representative.—D. LESLIE BEATH, Honorary Secretary.

BIRMINGHAM BRANCH.—The annual meeting of this Branch will be held at the Medical Institute, Edmund Street, on June 17th, at 3.30 p.m. Business: (1) Election of officers. (2) Election of Representatives on Central Council. (3) Annual report of Council and balance sheet. (4) Report of Ethical Committee. (5) Report of Pathological and Clinical Section. (6) The President for the ensuing session, Dr. Herbert Manley, will deliver his Inaugural Address on the "Medical Aspect of the Report of the Poor Law Commission.—ALBERT LUCAS, J. FURNEAUX JORDAN, Honorary Secretaries.

BIRMINGHAM BRANCH: CENTRAL DIVISION.—The annual meeting of this Division will be held at the Medical Institute on Wednesday, June 30th, at 3.30 p.m., at which the election of officers for the ensuing year will be held. Nominations in writing for the offices of Chairman, Vice-Chairman, and two Honorary Secretaries must reach the Honorary Secretaries not later than Wednesday, June 9th.—A. W. NUTHALL, W. TRACY LYDALL, Honorary Secretaries.

BORDER COUNTIES BRANCH.—The annual general meeting of the Branch will be held in the County Hotel, Carlisle, on Friday, June 25th. Business: To receive the report of the council for the past year; to elect the officers of the Branch; and Dr. Murdoch, of Annan, will deliver his Presidential address. Further details of information will be sent to each member by post.—FRANCIS R. HILL, Honorary Secretary, 62, Warwick Road, Carlisle.

DORSET AND WEST HANTS BRANCH.—The summer meeting of this Branch will be held in Christchurch, Hants, on Wednesday, July 7th. Members wishing to read papers, show cases, exhibit specimens or propose new members, must communicate with the undersigned not later than Thursday, June 24th.—JAMES DAVISON, Honorary Secretary, "Strateplace," Bournemouth.

EAST ANGLIAN BRANCH.—The annual meeting of the Branch will be held at the Grand Hotel, Clacton-on-Sea, on Thursday, July 1st.—B. H. NICHOLSON, East Lodge, Colchester, Honorary Secretary.

EAST YORK AND NORTH LINCOLN BRANCH.—The annual meeting of this Branch will be held at the Grimsby Hospital on Saturday, June 19th. Further particulars as to the time of meeting and business to be transacted will be published later in the JOURNAL and communicated by circular to each member.—EDWARD TURTON, M.D., Honorary Secretary, 1, Albion Street, Hull.

EDINBURGH AND FIFE BRANCHES.—The attention of members of these two Branches is drawn to the fact that nominations for the election of two members upon the Central Council of the Association should be sent in to one of the Secretaries not later than June 16th.—A. LOGAN TURNER, 27, Walker Street, Edinburgh; FRANCIS D. BOYD, 22, Manor Place, Edinburgh; BALFOUR GRAHAM, Leven, Fife.

FIFE BRANCH.—The seventh annual meeting will be held in the Hotel, Thornton, on Thursday, June 17th, at 3 p.m.—R. BALFOUR GRAHAM, Honorary Secretary, Leven.

GLASGOW AND WEST OF SCOTLAND BRANCH.—The annual meeting of the above Branch will be held in the Pathological Department, Western Infirmary, Glasgow, on Wednesday, June 9th, at 3 p.m. Business: (1) Minutes of previous meetings, (a) annual meeting, (b) special meeting; (2) reports: (a) secretary's, (b) treasurer's, (c) on the abuse of medical charity, (d) payment for attendance on street accidents; (3) election of office-bearers. At 4.30 p.m. Professor Robert Muir and assistants will give a pathological demonstration.—JAMES GRANT ANDREW, Honorary Secretary.

LANCASHIRE AND CHESHIRE BRANCH.—The annual meeting of the Branch will be held at Chester on Wednesday, June 16th. Members desiring to make scientific, clinical, or other communications will please communicate at once with the Branch Secretary, F. CHARLES LARKIN, 54, Rodney Street, Liverpool.

LANCASHIRE AND CHESHIRE BRANCH: ALTRINCHAM DIVISION.—The annual meeting will be held at the Board Room of the Altrincham Hospital at 5 p.m. on Thursday, June 10th. (Afternoon tea 4.30 p.m.) The principal business is the appointment of officers and committee for 1909-10. Every member is eligible for every office; nominations in writing, and signed, may be sent to the Honorary Secretary at any time before June 8th. The membership of the associates lapses also at this date. Dinner at the Brooklands Hotel, 7.15 p.m. Names must be given to the Honorary Secretary not later than first post on June 10th. *Clinical and Scientific Meeting.*—A meeting will be held at the Board Room of the Altrincham Hospital at 5 p.m. on Thursday, June 24th. (Afternoon tea 4.30 p.m.) Clinical cases will be shown, and Dr. Rhodes will read a paper on Scarlet Fever, to be followed by a discussion. Dinner at the Brooklands Hotel, 7.30 p.m. Ladies invited. Names must be given to the Honorary Secretary by Monday, June 21st, in order that he may have time to cancel the arrangement, so far as the ladies are concerned, if there are not sufficient acceptances (say, five or six at least). The committee hopes that this will not be necessary, but if it is the dinner will be held under ordinary conditions, members to give their names not later than first post on June 24th. (If any alteration of programme becomes necessary it will be advertised in the SUPPLEMENT, which members should consult regularly.)—T. W. H. GARSTANG, Honorary Secretary.

METROPOLITAN COUNTIES BRANCH: ST. PANCRA'S AND ISLINGTON DIVISION.—The annual meeting of this Division will be held on Tuesday, June 8th, at 9 p.m., at the Midland Grand Hotel, King's Cross.—W. GRIFFITH, Honorary Secretary.

MIDLAND BRANCH.—The annual meeting of this Branch will be held at the Leicester Infirmary on Thursday, June 10th. (1) The President-elect, Dr. R. Pratt, will give an address. (2) Election of Branch officers. (3) Annual report of the Branch. (4) Any other business.—ROBERT SEVESTRE, Honorary Secretary, London Road, Leicester.

MUNSTER BRANCH.—Nominations for a Representative of the Branch on the Central Council (in accordance with By-law 24) will be received up to June 5th by PHILIP G. LEE, 26, St. Patrick's Hill, Cork, Honorary Secretary.

MUNSTER BRANCH.—The annual general meeting of the Branch will be held on Saturday, June 12th, at 4.30 p.m., in the Rooms of the Medical Society, 74, South Mall, Cork. Representatives, officers, and council for 1909-10 will be elected, and any other necessary business transacted.—PHILIP G. LEE, 26, St. Patrick's Hill, Cork, Honorary Secretary.

NORTHERN COUNTIES OF SCOTLAND BRANCH.—The annual meeting of the Branch will be held at Elgin on Saturday, June 5th.—J. MUNRO MOIR, M.D., Honorary Secretary, 4, Ardross Terrace, Inverness.

SOUTH-EASTERN BRANCH.—The sixty-fifth annual meeting of the Branch will be held in the Town Hall, Croydon, on Wednesday, June 23rd, at 2.15 p.m. Dr. J. J. MACAN (President-elect) kindly invites members to lunch at the Greyhound Hotel from 1 to 2 p.m. Agenda: In addition to the business of an ordinary meeting: (1) To receive the report of the election of new officers, who shall thereupon take office. (2) To receive the report of the Council on the affairs of the Branch and the annual financial statement. After the meeting members are invited by Dr. Pasmore to a garden party at the Mental Hospital, Warrington. The dinner will be held at the Greyhound Hotel at 6.15 p.m., charge 5s. Wine will be provided by the local members. Those who propose to be present at lunch, the garden party, or dinner, are requested to signify their intention to Dr. E. H. WILLOCK, 91, London Road, Croydon, not later than Saturday, June 19th.—H. M. STEWART, Honorary Secretary.

SOUTH-EASTERN BRANCH: MAIDSTONE DIVISION.—The next meeting of this Division will take place on Thursday, June 17th, for the purpose of electing officers for the ensuing year. It has been proposed to have a dinner afterwards. The Honorary Secretary would feel greatly obliged if each member would kindly intimate his intention of being present or not as early as possible.—GEORGE POTTS, Honorary Secretary.

SOUTH MIDLAND BRANCH: BUCKINGHAMSHIRE DIVISION.—The annual meeting will take place on Tuesday, June 15th, at the Royal Bucks Hospital, Aylesbury, at 3.30 p.m. Agenda: (1) Election of officers: (a) Representatives on Branch Council; (b) Executive Committee; (c) Ethical Committee; (d) Representative to Annual Meeting and Deputy. (2) Receive Annual Report of Committee. (3) Instruct Representative to Annual Meeting: *re* Hampstead Hospital dispute; *re* title of "General Secretary"; *re* treatment of defective school children; *re* public medical services; *re* should all M.O.H.'s be whole-time officers? (4) Any other business. The following resolution will be moved: "That the Committee take steps to secure that every medical man in the area of the Division give an undertaking to accept no new club or contract work at a lower sum than that fixed as a minimum by the Association in the report on contract practice, namely, 5s. per adult member. Also to endeavour to secure united action in cases where the present club fees are lower than this amount and to report to the Division." Dr. Lauriston Shaw, Physician to Guy's Hospital, will open a discussion on "Dilatation of the Stomach and the Use and Abuse of the 'Emergency Exit.'" Tea will be ready punctually at 3.30 p.m.—ARTHUR E. LARKING, Honorary Secretary.

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH.—The annual meeting of this Branch will be held at Malvern on Thursday, June 10th. To elect Branch officers and appoint members to the Central Council of the Association; to receive annual report of the Branch, and for any other business. Dinner.—C. S. MORRISON, Honorary Secretary.

YORKSHIRE BRANCH.—Nominations for the election of Representative members of the Central Council (two), each signed by at least three members, must be forwarded to me not later than June 15th. The present Representatives are Drs. Gorder and Sinclair White.—ADOLPH BRONNER, Honorary Secretary, 33, Manor Row, Bradford.

YORKSHIRE BRANCH.—The annual meeting of the Branch will be held at the Grand Hotel, Scarborough, on Saturday, June 26th.—ADOLPH BRONNER, Honorary Secretary, 33, Manor Row, Bradford.

YORKSHIRE BRANCH: BRADFORD DIVISION.—The annual meeting of the Division will take place on Tuesday, June 8th, at the Grand Northern Victoria Hotel, Bradford, at 8.30 p.m. Agenda: (1) Minutes. (2) Election of Officers, etc. (3) Election of Representative to the Representative Meetings. (4) Annual Report of Executive Committee. (5) Instruction of Representative. (6) Any other business.—J. BEATTIE DUNLOP, J. WHERRY WILSON, Honorary Secretaries.

YORKSHIRE BRANCH: LEEDS DIVISION.—A scientific meeting will be held in the Leeds Public Dispensary, North Street, Leeds, at 3.45, on the afternoon of Thursday, June 10th, when the following papers will be read and cases shown:—Mr. H. J. Roper: Notes on a Case of Pelvic Haematocoele. Dr. Trevelyan: A series of cases of Tuberculous Glands, etc., treated with tuberculin. Mr. Michael A. Teale: Case of high myopia, showing Weiss's line in the fundus. Case showing vascularized exudation projecting into the vitreous humour with white degeneration of some of the retinal vessels. Case in which Hess's operation has been done for complete paralytic palsy of the left lid. Mr. Seaton: Some cases of surgical interest. Mr. Alexander D. Sharp: Demonstration on the direct inspection of the larynx by Brünning's and Chevalier-Jackson's instruments.—JAS. ALLEN, Honorary Secretary.

MEMBERS ELECTED DURING THE MARCH QUARTER.

GENERAL COUNCIL

OF

MEDICAL EDUCATION AND REGISTRATION.

SUMMER SESSION, 1909.

Wednesday, May 26th.

Sir DONALD MACALISTER, K.C.B., President, in the Chair.
THE minutes of yesterday's proceedings were agreed to.

DISCIPLINARY CASES.

During the hearing of these cases, Mr. Lushington appeared as Legal Assessor, and Mr. Winterbotham as Solicitor for the Council.

The first case which came on for consideration was that of Robert Kirk, formerly registered as of Delmynden, Carshalton, Surrey, but now of Willington, co. Durham, M.B., Mast. Surg. 1897, Univ. Glasg., who had been summoned to appear before the Council.

Mr. W. E. HEMPSON, solicitor, appeared for Mr. Oliver Hepple, the complainant.

THE PRESIDENT stated that the accused practitioner had sent a letter stating that he did not propose to attend.

Mr. WINTERBOTHAM read the notice which was sent to the defendant containing the charge, which was that he abused his position as a medical man by committing adultery on various occasions with a married woman when professionally attending her and her children, and that in relation thereto he had been guilty of infamous conduct in a professional respect.

Mr. WINTERBOTHAM read a letter which had been received from the accused practitioner in which he stated that he had been guilty of the adultery charged against him; but it was committed in his own house, and not as between doctor and patient; he had no defence to offer.

Mr. W. E. HEMPSON then read the complainant's case, and stated that as the accused practitioner had admitted the adultery, it was not necessary for the Council to go into the facts, beyond pointing out that the accused had been the medical attendant of the family for a period of six years. He further stated that the adultery did not take place on a solitary occasion, but that it occurred twenty or thirty times; therefore it was perfectly clear that these acts were going on for a considerable period of time. He submitted that the Council would be quite satisfied that the relation of medical man and patient existed between the parties, and that the sacred trust which was imposed in a medical man had been violated by this practitioner. In the confession which had been made by the accused practitioner he admitted that he took advantage of the absence of the husband, who was a male nurse.

The husband was then called, and in examination bore out the opening statements of Mr. HEMPSON.

THE parties and strangers were directed to withdraw. On their readmission.

THE PRESIDENT announced the decision of the Council as follows: Mr. HEMPSON,—I have to announce to you that the Council have judged Robert Kirk to have been guilty of infamous conduct in a professional respect, and have directed the Registrar to erase from the *Medical Register* the name of Robert Kirk.

The next case which the Council considered was that of Christopher Richard Kempster, registered as of Whitehall, Bank Place, Collins Street, Melbourne, Mem. R. Coll. Surg. Eng., 1896, Lic. R. Coll. Phys. London, 1896, who had been summoned to appear before the Council.

Dr. Hugh Woods represented the complainants, the London and Counties Medical Protection Society, Limited. The defendant did not appear.

Mr. WINTERBOTHAM read the notice which was sent to the defendant at Melbourne, Australia, in which the charge was:

That you have accepted and continue to hold the appointment of Chief Surgeon to the Freeman and Wallace Electro-Medical Institute, of Melbourne and Sydney, Australia, a company which habitually seeks to attract patients by the insertion in the *Argus* newspaper of advertisements of a scandalous, offensive, and indecent nature, accompanied by a portrait of yourself and a statement of your qualifications, and that in relation thereto you have been guilty of infamous conduct in a professional respect.

Dr. HUGH WOODS described the nature of the advertisements, characterizing them as most objectionable. When the matter was brought to the attention of the defendant, he suggested that he had been drawn into a contract with the company, in comparative ignorance of the nature of it; that he did not in any way approve of the advertisements or the methods of the institute, and that he was withdrawing from it. Unless Mr. Kempster was in a position to prove those things to the Council, and also to prove that he did all that he could to rectify the position in which he was placed, he (Dr. Wood) should ask the Council, without the slightest hesitation, to pronounce him guilty of conduct infamous in a professional respect. Dr. Woods handed to the members of the Council the advertisements of which he had spoken.

THE PRESIDENT said as the accused practitioner was not present, but had sent several communications, he thought those parts of the communications which were relevant to the present charge should be read by the Solicitor.

Mr. WINTERBOTHAM said that the attention of the Council was first brought to this matter by the Medical Board of Victoria. Mr. Kempster wrote to the Registrar of the General Medical Council stating that he had entered into an agreement with the company, and it became necessary, in consequence thereof, that his name should appear from time to time in the public press; and although he was not, by so doing, infringing the regulations of the Australian Medical Board, yet it had been pointed out to him that he was infringing the regulations of the General Medical Council. Mr. Kempster had further stated that he had tried to get his agreement cancelled, but without success; and therefore he wished his name removed from the *Register* of the General Medical Council until the agreement had expired. He stated that he had since taken steps to annul his agreement with the company, and had severed his connexion with it since December 27th last. Mr. Winterbotham pointed out to the Council that there was no expression of regret whatever on the part of Mr. Kempster, or any admission of any offence; the only suggestion was that he had not broken any of the local regulations. The Council had also received a letter from the Secretary to say that the Australian Board had no statutory power to remove his name.

Parties and strangers were directed to withdraw. On their readmission.

THE PRESIDENT said: Dr. Woods, I have to announce the decision of the Council as follows: That the Council do now judge Christopher Richard Kempster to have been guilty of infamous conduct in a professional respect, and do direct the Registrar to erase from the *Medical Register* the name of Christopher Richard Kempster.

The Council next dealt with the case of Charles William Brown, registered as of 7, Chorton Road, Hulme, Manchester, M.B., Mast. Surg. 1899, Univ. Edin., who had been summoned to appear before the Council.

Mr. Alfred Tarbolton (of the firm of Brett, Hamilton, and Tarbolton, solicitors, of Manchester) appeared for the complainant, Mr. Thomas George Paterson; Mr. Bodkin (instructed by Mr. W. H. Martin, King Street, London) appeared for Dr. Brown.

Mr. WINTERBOTHAM read the notice which had been served on the accused practitioner containing the charge, which was as follows:

That you have employed as your assistant in connexion with your professional practice a person not duly qualified or registered under the Medical Acts—namely, Mr. Amery—and have knowingly allowed him on your behalf to attend and treat patients in respect of matters requiring professional discretion or skill, and that in relation thereto you have been guilty of infamous conduct in a professional respect.

Mr. TARBOLTON, in opening the case for the complainant, stated that the case arose under the following circumstances: Mr. Paterson was called in to visit a family of the name of Simpson in 1908, and was then told certain facts which gave him the impression that Dr. Brown was employing an unqualified man named Mr. Amery as his assistant for work for which he ought not to have employed him. This was not a personal matter with Mr. Paterson, but he disclosed these facts to the Chairman of the West Manchester Division of the British Medical Association, omitting the name; it was brought before the Division, and it unanimously ordered a complaint to be sent to the Council, and he (Mr. Tarbolton) had the names of twelve doctors.

Mr. BODKIN said he was sorry to interrupt the opening, but what had they to do with what twelve doctors may have thought or said? He did not know, of course, what was coming, but he asked his friend to confine his opening remarks to what was relevant to the inquiry, and to those things of which he had had notice.

Mr. LUSHINGTON requested Mr. Tarbolton to confine himself to the facts which he intended to prove, and to comment only on those facts.

Mr. TARBOLTON said he was going to put Mr. Paterson forward to prove that the twelve gentlemen at the inquiry did say what he was about to say.

Mr. LUSHINGTON thought that would not quite do; the charge the Council was inquiring into was a little beyond that.

Mr. TARBOLTON (continuing) said that the first case related to the Simpson family. A Miss Jane Simpson, who was present, from April, 1904, till August, 1908, was being regularly attended by Mr. Amery; she would say that they always called him "Dr. Amery"; and he always allowed them to call him "Dr. Amery." He was paid 2s. 6d. a visit. The medicine came from Dr. Brown's surgery. Mrs. Simpson and Miss Simpson would say that they had called for medicine at Dr. Brown's surgery, and had there seen Dr. Brown; Dr. Brown knew their identity perfectly well. It was quite true that only Mr. Amery called at the house, and that Dr. Brown never charged them. But it was to be assumed that Dr. Brown must have known, through seeing them there, that Mr. Amery was attending them; Dr. Brown could not say that Mr. Amery was attending them without his knowledge. With regard to Mr. Simpson, the father of this girl, he was taken seriously ill in November, 1907. Mr. Paterson was sent for, but he was also ill, so Mr. Amery was sent for. Mr. Amery called at 11 a.m., and found that Mr. Simpson was suffering from pneumonia. At 2 p.m. Dr. Brown called without being requested to do so, and Mr. Amery called again at 8 p.m. On November 21st Dr. Brown called at 1 p.m. and Mr. Amery at 7 p.m. On the 22nd Dr. Brown called at 1 p.m.; he promised to call again at 2 p.m., but failed to do so. Mr. Simpson died at 2.30. After the death Mr. Amery called at 4.30; that would account for seven visits. Mr. Paterson would prove that the custom in that part of the country was to charge 2s. 6d. a visit; therefore, those seven visits at 2s. 6d. would make 17s. 6d., the amount of the bill sent in. Dr. Brown's statement was that he was there five times, for which he charged, presumably, 3s. 6d. a visit, and that would amount to 17s. 6d. That was disputed. The ladies would say that Dr. Brown and Mr. Amery called alternately, and that there were seven visits. Mr. Paterson would prove that 2s. 6d. was the regulation fee in the district. The next case was that of the same daughter, who was suffering from a swollen face. She was then taking medicine for her eyes from Mr. Amery. Mr. Amery was sent for, and he advised her to stop that particular medicine. He said he would visit her the next day, but he did not; Dr. Brown came in his place. The case for the complainant was that those cases which he had indicated to the Council proved that Dr. Brown was knowingly employing Mr. Amery to perform functions which only a qualified man was entitled to perform. Dr. Brown had not made a statutory declaration in reply, but had simply sent two letters in which he stated he had merely sent Mr. Amery to attend Mrs. Pinder, and it was significant he did not deny Mrs. Pinder's statement that Mr. Amery carried out the actual delivery. The next class of case was with regard to two nurses during the period February, 1906, to February, 1908. They proved that there were constant operations going on at the McAlpine Home. There were three classes of operations at which these nurses had assisted when Mr. Amery administered anaesthetics: one class was operations on private patients at the home; the second was on private patients at their residences, and the third was on patients who were in the home. Dr. Brown, in his reply, ignored Nos. 1 and 2 altogether, although one of the nurses alleged she assisted at 15 cases at which Mr. Amery administered the anaesthetic and the other nurse about 12 cases. Dr. Brown alleged that his services were gratuitous because he was the honorary surgeon, which was rather shirking the complaint. The third and fourth class of case bore on the

locumtenent whom Dr. Brown had once employed, named Dr. Burgess. Dr. Burgess had made a declaration in which he said he had acted for three months, during 1907, when Dr. Brown was ill, and he found that Mr. Amery was known by all the patients as "Dr. Amery." He used to look over the day book every morning and see the names of the patients, and when he, Dr. Burgess, was attending a particular patient she would tell him she did not agree with his advice and she wanted to see Dr. Amery, and when she was told that Dr. Amery was not a qualified man, Dr. Brown had rebuked him for having disclosed that fact. Mr. Tarbolton called the following evidence in support:

Dr. THOMAS GEORGE PATERSON (in reply to Mr. Tarbolton) said he had heard the opening statement, which was correct. He was not acting with any personal feeling in the matter, but with the full authority of the West Lancashire Division of the British Medical Association. The McAlpine Homes were maternity homes for servant girls and others who had become pregnant; they were not used as private homes by doctors. The usual fee in the particular district of Manchester referred to was 2s. 6d. for a visit and medicine.

Cross-examined by Mr. BODKIN: Mrs. Simpson first became a patient of his about fifteen years ago, but he could not say he was still her medical adviser. He attended her from time to time. In November, 1907, he was ill when Mr. Simpson died and he was not sent for to attend him. Young Mr. Simpson called and informed him of his father's death, when Mrs. Paterson asked who had attended his father, and she was informed Doctor Brown. Dr. Paterson did not attend any of the Simpson family from then until August, 1908. The Justice of the Peace who went to Mrs. Simpson for the purpose of her making a declaration was also a medical man and a friend of his. Dr. Burgess had never acted as his locumtenent or otherwise; 3s. 6d. was not the usual charge in the district in which the Simpsons lived.

Mrs. MARY ANN SIMPSON, in answer to Mr. Tarbolton, said she was the widow of Mr. W. Simpson. In April, 1904, Mr. Amery's mother said she would send Mr. Amery to see her daughter with regard to her eyes. He attended, and continued to visit her for four years and five months. She thought he was a properly qualified man, and she called him "Dr. Amery"; he never called himself anything different. He called once a week, and sometimes twice. He examined her daughter's eyes, and gave her drops and medicine. He directed her to go to Dr. Brown's surgery for medicine every time. She did so and had seen Dr. Brown there, whom she knew by sight, and he had seen her. He had often called her by name, and asked, "Are you waiting for medicine?" and when she replied "Yes," he asked what name, and she replied "Simpson," and he gave it to her. Dr. Brown had never called at her house until the beginning of July, 1908, to see her daughter. In November, 1907, her husband was taken ill, and she sent for Dr. Paterson, but he was ill at the time and could not come. Dr. Amery was sent for. He attended and said her husband was very ill and had pneumonia, and that he would call again. He did nothing beyond saying to her husband that he had pneumonia. He did not examine him, but sent Dr. Brown. When Dr. Brown came he saw her daughter, who told him she was under Dr. Amery for sore eyes. He merely replied, "Oh." After Dr. Amery called, on November 21st Dr. Brown attended in the morning and Dr. Amery in the evening. On November 22nd her husband died. Dr. Brown attended twice on that day, and Dr. Amery also called. There were in all three visits by Dr. Brown and four visits by Dr. Amery. She had a bill for those attendances, which she paid to Dr. Amery when he came to attend her daughter on the Saturday. She gave him a sovereign, half a crown of which was for the attendance on her daughter. She had been paying at the rate of 2s. 6d. a visit, and she assumed that she was paying at that rate. Subsequently her daughter developed goitre, and she sent for Dr. Amery. That would be about the beginning of July, 1908. He said a little change would do her good, and that he would call the next day. The next day Dr. Brown called and said that as he was in the neighbourhood he had called instead of his assistant.

Cross-examined by Mr. BODKIN: She wrote out her declaration herself in the presence of Dr. Paterson. She knew Dr. Worswick, the Justice before whom she made the declaration, quite well as a doctor. She did not know whose writing the declaration was in, but it was brought to her by Dr. Worswick to declare, and she had not seen it before he produced it to her to sign it. She could not say where he had got it from. He told her he had come on behalf of Dr. Paterson. Her husband knew Mrs. Amery, the mother of Dr. Amery, and it was through her going to where her husband was employed that they got to know him. She personally did not know Mr. Amery at all until the day he called to see her daughter. She could not say how long her husband had known Mrs. Amery before Dr. Amery attended her daughter. Mr. Mellor, an oculist in Manchester, attended her daughter before Dr. Amery saw her. It was a very expensive matter, and she and her husband decided, as they had heard Dr. Amery was very clever, to get him to attend her daughter, as it would be cheaper than continuing with the oculist. She had to go to Dr. Brown's surgery for the medicine. Dr. Brown never examined her daughter's eyes or treated her in any way. The bottle of lotion which she obtained from the surgery was always marked "Mrs. Simpson." She obtained the lotion or medicine on every occasion from Dr. Amery, and any words exchanged between herself and Dr. Brown were merely casual observations as she was going in or out of the surgery. Up to 1907 her regular medical attendant was Dr. Paterson, but he had not attended any member of her family for some three or four years before 1907. At the time her husband was taken ill he would not see Dr. Amery, although he was in the house, as he did not like him. She sent her son for Dr. Amery to come and see her husband, and directly he came he went away and sent Dr. Brown. It was not true to suggest that Dr. Brown called five times to see her husband: it was only three times. She paid the bill to Mr. Amery herself. Half a crown was for himself for one attendance for her daughter's eyes, and 17s. 6d. was for Dr. Brown. Dr. Brown saw her daughter in July, 1908; he merely said she had better go away to the seaside. She had never had any account from Dr. Brown in respect of this visit, neither was there any reference to that visit in her first declaration. Her second declaration was brought to her by Dr. Paterson, already written out, as he knew the facts she had stated. She had not stated the facts about the attendance on her husband before she made the declaration. She was still a patient of Dr. Paterson when it was necessary.

By Mr. LUSHINGTON (Legal Assessor): When she went to the surgery she had seen Dr. Brown there when Mr. Amery was not there; he merely said, "Good-evening, are you waiting for medicine?" Mr. Amery had handed her medicine in Dr. Brown's presence. Dr. Brown knew her by sight quite well and also by name. When she got the bottle the name "Miss Simpson" was written on it; it was medicine to be taken internally. The receipt for 17s. 6d. was by Dr. Amery. She saw him sign it. During the four years Dr. Amery was attending her daughter, Dr. Paterson was her regular medical adviser, but she did not think he knew of Dr. Amery being there. During the time Dr. Paterson never attended her daughter at all. She had seen Dr. Paterson during that time, but he had not been to her house to see her. She called him her regular medical adviser because she used to go to him when she wanted a medical man. She never saw Dr. Brown make up the medicine which she got for her daughter; it was sometimes handed to her by the boy and sometimes the servant; Dr. Brown never gave it to her himself, although he saw her take it. During the four years that Dr. Amery was seeing her daughter from week to week she never got a bill from Dr. Brown, neither did she have Dr. Brown in the house until he came to see her husband. There was no other account owing to him, except in respect of her husband.

JANE S. SIMPSON, in reply to Mr. TARBOLTON, said she was the daughter of the last witness and lived with her mother. She was attended by Dr. Amery for four years and five months, once a week and sometimes twice a week. When he came he merely examined her eyes through a glass and gave her medicine and lotion. She continued to take the medicine until August last year when her neck

got bad. She had been herself to Dr. Brown's surgery for the medicine and had seen Dr. Brown come out of the consulting room. She merely said "Good-evening" to him and nothing more. He never gave her the medicine. It was given to her by the boy.

Mr. TARBOLTON then read the declarations of Jessie Garrett Taylor, Elizabeth Greenwood, Emily Gertrude Pinder, Sarah Jane Holmes, and Dr. Edward Burgess, in support of the case on behalf of the complainant.

At the request of Mr. BODKIN, the Council resolved to hear the evidence of two medical men, called on behalf of the respondent as to character and reputation, in order that they might return to their practice.

Dr. T. ARTHUR HELME, in reply to Mr. BODKIN, said he was a Doctor of Medicine of Edinburgh, a Member of the Royal College of Physicians, London, and honorary surgeon to the Northern Hospital for Women and Children at Manchester. He had also been President of the Lancashire and Cheshire Branch of the British Medical Association. He had practised in Manchester for twenty years, and during the whole of that time had known Dr. Brown and had met him on many occasions, professionally and otherwise. With regard to the character and reputation which Dr. Brown bore in Manchester his opinion was that Dr. Brown was a man of high standing in the profession, and in his (Dr. Helme's) capacity as Honorary Secretary and as President of the Lancashire and Cheshire Branch of the British Medical Association and President of the Division he had never heard one word or suggestion against him, although all ethical matters in the district were dealt with. He was well acquainted with the locality where Dr. Brown practised, and a charge of 3s. 6d. and upwards in that neighbourhood was the usual charge; half a crown a visit with medicine was not. With regard to the allegation that this matter had been brought before the General Medical Council by the Association, he desired to say what he knew of the matter. He had understood that it was a personal dispute between two medical men. He volunteered his services to settle it, and with that end had called upon the Honorary Secretary of the Division in which these two doctors lived. That gentleman had told him that Dr. Paterson had made a complaint against Dr. Brown to the Division, which had decided not to deal with it. The rule in that Division was that no ethical matter could be discussed unless notice of the complaint had been made to the person accused. In this case the Honorary Secretary informed him that Dr. Brown had not been communicated with, and therefore the Division, by its own rule, was incapable of dealing with the question.

Mr. ARTHUR WILSON CHAPMAN, in reply to Mr. BODKIN, said he was a Bachelor of Medicine and Master of Surgery, Aberdeen, a member of the Manchester City Council, Deputy Chairman of the Tramway Committee and Chairman of the Midwives Supervising Board and a Justice of the Peace for the City of Manchester. He had practised in Manchester for twenty-three years, and had known Dr. Brown since he first came to Manchester about twenty years ago. He had met him constantly, and had had many opportunities of forming an opinion as to his character, which was of the highest. He knew the district in question well; 2s. 6d. to 3s. 6d. was the usual fee.

THE PRESIDENT pointed out that the last two witnesses had spoken to something more than character.

Mr. BODKIN replied that it was for the other side to cross-examine them. This Mr. Tarbolton did not desire to do.

The further hearing was then adjourned until the following day.

Thursday, May 27th, 1909.

Sir DONALD MACALISTER, K.C.B., President, in the Chair.

The minutes of the previous day's proceedings were taken as read and confirmed.

UNIVERSITY OF BRISTOL.

THE PRESIDENT stated that he had received from the Privy Council a copy of the Bristol University Bill. The bill had passed the second reading and the report stage in the House of Lords, the paragraphs which related to the

General Medical Council were drawn up on the lines of the Act passed with regard to the University of Sheffield.

7. *Power of University to hold Examinations under 19 and 50 Vict., c. 48.*—The University is hereby empowered to hold qualifying examinations in medicine surgery and midwifery for the purpose of granting a diploma or diplomas conferring the right of registration under the Medical Acts as if the University had been a University in the United Kingdom legally qualified at the passing of "The Medical Act 1856" to grant diplomas in medicine and surgery and the provisions of Part I of that Act shall be read and have effect accordingly.

8. *Power of University to Choose Representative on General Medical Council.*—The Council of the University shall be entitled to choose one representative to be a member of the General Council constituted by the Medical Acts and Section 7 of "The Medical Act 1856" shall be read and have effect as if of the University had been expressly included therein. Provided always that the fees for attendance and the travelling expenses of such member payable under Section 12 of "The Medical Act 1858" shall not be paid from the funds of the General Council or of the Branch Council for England until such time as upon the representation of the General Council or of the Privy Council made in the manner set forth in Sections 10 and 19 of "The Medical Act 1856" and subject to the provisions therein contained His Majesty may by Order in Council appoint.

DISCIPLINARY CASES.

The Council then proceeded to the consideration, adjourned from May 26th, of the case of Dr. Charles William Brown.

Mr. TARBOLTON stated that after what occurred on the previous day he felt it his duty to advise his client to wire for the two nurses and Mrs. Pinder. These persons were now present and ready to be examined or cross-examined.

The PRESIDENT pointed out that the case for the complainant was technically closed, but as the statutory declarations of these people were put in the Council would allow them to be tendered for cross-examination.

Mrs. Pinder, Nurse Elizabeth Greenwood, and Miss Jessie Garrett Taylor were then cross-examined on their declarations by Mr. BODKIN.

Mr. BODKIN, in opening the case on behalf of the respondent, said Dr. Brown had practised for twenty-one years in this particular district of Manchester, and until March, 1909, there had never been a breath of suspicion against his professional honour until after Dr. Paterson had discovered that Mr. Simpson had been attended by Dr. Brown. He particularly drew attention to Dr. Paterson because he was the complainant who insisted on coming to this tribunal, and who would have no intermediary, who would have no suggestion of any possible explanation from the person he was intending to accuse; who rejected Dr. Helme's suggestion that if there was a dispute between two members of the same Association in the same district he, as President of the Branch, was the person to decide between them. Dr. Paterson would have the Council believe that this case was specially sent—not by him, except as the mere instrument—after consideration of it by a Branch of the British Medical Association in Manchester. There was not a word of truth in that statement. Dr. Helme had taken the trouble to come to speak to Dr. Brown's reputation, and also to explain that the reason why the Association in Manchester could not consider the accusation was because no notice to the accused had been given. The case had been growing and developing since last November. The Council would not have failed to notice that from then to May the only statements of declarations were those of Mrs. Simpson and her daughter. It was not until they learnt that Dr. Brown was represented by his solicitor and had sent in a denial of these allegations to this tribunal that Dr. Paterson searched heaven and earth and Manchester to get evidence in support of the accusation, which was that Dr. Brown was in the habit of practising through an unqualified person. Then what did they find? A couple of probationary nurses and a Mrs. Pinder and Dr. Burgess. Dr. Burgess was not present in support of the statements in his declaration, which he, counsel, specifically challenged. Why had he not attended to support the statements contained in his declaration? It had been said that the simple reason was that the matter was not of sufficient importance for Dr. Burgess to be present. He commented on the manner in which the declaration had been obtained, Dr. Paterson and Dr. Worswick, the Justice of the Peace before whom they were

made, going to the declarants' houses, and producing the declaration from his pocket already prepared from something written out by a solicitor, who admittedly made mistakes. The charge against Dr. Brown was that he had been covering an unqualified practitioner. He, Mr. Bodkin, supposed it was professional misconduct for a professional man to spread himself over a larger area of practice than would otherwise legitimately fall to him by getting unqualified persons to do the work. If that was the true significance of the accusation of covering, he submitted there was not a tittle of evidence in this case to support it. The true test of professional misconduct was whether the person accused enriched himself at the expense of his brother practitioners in a particular neighbourhood by getting fees through sending out an unqualified representative. With regard to Mr. Amery, the Council had not to consider, his position, except as affecting Dr. Brown. Mr. Amery attended Miss Simpson at the special request of his mother and Mrs. Simpson. It might not from an unqualified assistant's point of view have been a prudent thing to do, but from the first time he did it to the last Dr. Brown had no knowledge of it. There was not a single entry, and nothing in his system of book-keeping which could have raised any suspicion with regard to Mr. Amery so as to affect Dr. Brown. At first Mr. Amery obtained the drugs for the medicine for Miss Simpson from a chemist in the immediate neighbourhood, but, as they were expensive drugs, after a time he asked Dr. Brown whether he might make some medicine up for a person who could ill afford to pay for it. It was in that way that he did from time to time make up this medicine which came from Dr. Brown's surgery, from Dr. Brown's stock of drugs, but with no knowledge on Dr. Brown's part of the person to whom it was to go or under what circumstances the medicine was being supplied. The point was, How did the evidence affect Dr. Brown? It was not until November, 1907, that Dr. Brown himself went to the Simpsons' house, and then upon a totally different matter. The only entries of the name of Simpson in any part of Dr. Brown's books was on November 20th, 21st, and 22nd, 1907; there they ceased, and they never commenced again. That the Simpsons may have gone to his surgery was not denied by Dr. Brown, but in what circumstances? Counsel then reviewed the evidence on behalf of the complainant in great detail, and commented upon the fact that Dr. Paterson did not appear as a witness. He suggested that the whole motive which had animated the present proceedings was malicious, and that where the reputation and practically the life of a man was at the disposal of the Council it would not approve of such conduct as had been brought to its attention in this matter. He invited the Council to scrutinize the evidence most carefully and closely before coming to a conclusion, and he concluded by submitting that there was not a particle of evidence to show that Dr. Brown was spreading himself over a larger area than he justifiably ought to have done, or that he was enriching himself by fees which ought to have gone into the pocket of another medical man. Taking that view of the case, he was quite sure that it would be the pleasure of the Council to acquit Dr. Brown of the charges which had been so rashly and improperly made against him.

Dr. Brown was then called, and stated his qualifications and where he carried on practice. He was a member of the British Medical Association. He employed Mr. Amery as his dispenser and book-keeper, first of all at 30s. a week and then, subsequently, at 35s. He was a student, or what was called a fourth-year man. His average number of visits a day were about forty. He kept his visiting-book himself, and kept it carefully, and recorded each visit that he paid to patients. In September, 1907, he went for a holiday to the Channel Islands, and Dr. Burgess was his locumtenent. He was practising at Saltburn, which was some considerable distance away. When he came back from his holidays he was sickening for what afterwards became an attack of enteric fever. When he found himself ill he made an arrangement with Dr. Burgess that he was to see the patients every day. He was to call upon them in the morning, and in emergency matters he was to be sent for if he was wanted. The practice with regard to patients calling

at the surgery at the time was that new patients were to see Dr. Burgess, and if an old, chronic patient came in he was to see him (Dr. Brown), and Dr. Brown would give the patient the same medicine as he had given before. It was not true to say that Dr. Burgess acted in this way throughout October, November, and part of December, but the proper date was from October 6th to November 12th. On November 12th he was actively engaged in his practice again. He had never employed Dr. Burgess since. He kept a visiting slate on which the names of visitors were recorded. On November 20th he found the name of Simpson on that slate. That was the first time he knew of anybody of that name in connexion with this particular family of Simpsons. He had never had any patients from that particular house before November 20th. He had no knowledge that Mr. Amery had been attending at the house. He had his books to show that there was no entry of the name of Simpson before that date. He found Mr. Simpson suffering from pneumonia. Mr. Simpson requested him to ask Mr. Amery to call upon him. When he, Dr. Brown, got back to his surgery, he asked Mr. Amery to call and see Mr. Simpson. He visited Mr. Simpson five times, twice on the first two days, and on the third day once. He charged various fees to his patients, some 2s. 6d. and some 3s. 6d. He produced his books showing entries of 20th, 21st, and 22nd November. Mr. Amery never on any of those dates went to Mr. Simpson's house as representing him, Dr. Brown. He himself attended the case. Mr. Simpson died on November 22nd. The first time he learnt Mr. Amery was attending for money was when these proceedings were commenced. He had never seen or prescribed for Miss Simpson in any shape or form. It was his habit to give medicine free to poor persons upon recommendation. He remembered Mr. Amery asking permission to make up some medicine for a person who could not afford to pay; but he did not remember seeing Mrs. Simpson at his surgery. Mr. Amery had assisted in giving ethyl chloride; but he had never given ether or chloroform. He would be assisted in that by Dr. Nicholls or by Dr. Chapman. He (Dr. Brown) was always present when an anaesthetic was given. The whole of his work in connexion with the home was purely honorary, with the exception of one or two major operations. Mr. Amery had never attended a confinement; he may have assisted to put a bandage on a patient. In no way whatsoever had he had one sixpence of the cost of the attendance of Mr. Amery on a patient. He had no notice, either at the end of last year or the commencement of this, from the British Medical Association as to this charge; the first notice he received of it was from the Registrar of the General Medical Council.

Cross-examined by Mr. TARBOLTON: He never knew that Mr. Amery attended Miss Simpson for four years, or anything like it; he was under the impression it was a friend. His usual fee was from 2s. 6d. to 5s.; he could not say why he charged Mrs. Simpson 3s. 6d. On no occasion had he received a fee for an operation at the home when an anaesthetic had been given. It was untrue that Mr. Amery attended Mrs. Pinder's confinement. The delivery was carried out by himself from beginning to end.

Re-examined by Mr. BODKIN: He operated in the McAlpine Home for the same reason that Dr. Helme had operated there on several occasions.

By Mr. LUSHINGTON (Legal Assessor): Mr. Amery was a registered medical student, but he did not know what examinations he had passed. He was not aware until November, 1907, that Mr. Amery was prescribing for people in a charitable way. He did not think it was proper; he had cautioned him about it, and was satisfied he had stopped it. He kept the attendance book, which was in his own handwriting, and was made up from the slate. The ledger was made up every quarter, and he was prepared to say it was made out at the usual time.

Mr. HARTLESS AMERY, examined by Mr. BODKIN, said he was a four years student under the old regulations. He had for some years been employed by Dr. Brown as a dispenser. He had known Mr. Simpson for a good many years; but not Mrs. Simpson or her daughter. His mother had known Mr. Simpson for many years, and she asked him to attend Mr. Simpson's daughter. At first he declined to have anything to do with it; but afterwards

agreed under pressure from both his mother and Mr. Simpson. Accordingly he attended Miss Simpson for the time that had been mentioned, and received money for his services, in respect of which no entry had been made in any book of Dr. Brown's. As far as he knew, Dr. Brown was not aware of the fact until this charge was made, when he informed him of it. He had asked Dr. Brown to allow him to take drugs out of his surgery as he could not afford to pay for them; the permission was granted and exercised. He had never attended Mr. Simpson in the sense of a doctor; he went to him at the request of Dr. Brown; no charge was made for any of these visits. He heard of Mr. Simpson's illness through attending his daughter. He determined the amount of the charge—3s. 6d.—to Mr. Simpson, using his own discretion as to what should be charged, having regard to the locality. He denied attending Mrs. Pinder in her confinement except while Dr. Brown was there, but he may have handed Dr. Brown the things to bind her up with. With regard to the operations deposed to by the nurses, he had given ethyl chloride under Dr. Brown's instructions but never chloroform. It might be that on one occasion he held the bottle, or lint, or something of that sort. He had never given or taken part in administering an anaesthetic.

Cross-examined by Mr. TARBOLTON: He attended Miss Simpson for her eyes on and off for about four years, and she got better while under his treatment. It was not the fact that she became totally blind. She was blind when he first saw her. Dr. Brown generally left it to him to enter up in the ledger what he should charge for a particular locality.

At the conclusion of the witness's evidence, the CHAIRMAN intimated that the Council did not desire to hear any further evidence for the defence.

Mr. BODKIN stated that the matron of the home was present to give evidence on Dr. Brown's behalf, and also Mrs. Feldman, with regard to Dr. Burgess.

Mr. TARBOLTON, in reply to the CHAIRMAN, said he did not wish to say anything in reply, except that it was not within the province of a solicitor or an advocate to press a case unduly, but to state the facts as fairly as possible to both parties. He had no idea of keeping Dr. Burgess out of the way; it was simply that he could not get him there. If he could have got him there, he would have done so.

Strangers were directed to withdraw. On their readmission,

The CHAIRMAN, addressing Dr. Brown, announced the judgement of the Council as follows: I have to announce to you that the facts alleged against you in the notice of inquiry have not been proved to the satisfaction of the Council.

The Council adjourned until the following day at 12 o'clock noon.

Friday, May 28th.

Sir DONALD MACALISTER, K.C.B., President, in the Chair.

The minutes of the previous day's proceedings, having been printed and circulated and no objection made thereto, were taken as read and signed by the President.

NEW MEMBER.

The PRESIDENT announced that Dr. J. Dixon Mann had been appointed to represent the Victoria University of Manchester.

COMMITTEES.

The following Committees were appointed:

The Examination Committee.—Dr. Taylor, Dr. Saundby, Dr. Caton (nominated by the English Branch Council); Sir Thomas Fraser, Dr. Finlay, Dr. McVail (nominated by the Scottish Branch Council); Sir John Moore, Sir Charles Ball, Dr. Kidd (nominated by the Irish Branch Council).

The Education Committee.—Dr. Norman Moore, Sir G. Philipson, Sir John Williams (nominated by the English Branch Council); Dr. Mackay, Mr. Hodsdon, Dr. Knox (nominated by the Scottish Branch Council); Sir Thomas Myles, Sir C. Nixon, Dr. Little (nominated by the Irish Branch Council).

The Public Health Committee.—Dr. Cocking, Mr. Power, Dr. McManus (nominated by the English Branch Council); Dr. Norman Walker, Sir John Luke, Dr. McVail (nominated by the Scottish Branch Council); Sir John Moore, Dr. Adye-Curran, Dr. Kidd (nominated by the Irish Branch Council).

The Pharmacopoeia Committee.—The President (Chairman), Dr. Norman Moore, Dr. Barrs, Sir John Moore, Sir George Philipson, Sir Thomas Fraser, Dr. Little, Dr. Caton, Dr. McVail.

The Finance Committee.—Mr. Tomes (Chairman), Mr. Morris, Sir John Take, Dr. Little.

The Dental Committee.—The President (Chairman), Mr. Morris, Mr. Tomes, Mr. Holsdon, Sir Thomas Myles.

The Dental Education and Examination Committee.—Mr. Tomes (Chairman), Mr. Morris, Sir Thomas Myles, Dr. Knox, Sir Charles Ball, Dr. Finlay.

The Students' Registration Committee.—Sir Hugh Beevor (Chairman), Dr. Norman Moore, Dr. Adye-Curran, Sir John Batty Take, Sir Christopher Nixon, Dr. Mackay.

APPOINTMENT OF EXAMINER.

On the motion of Sir HUGH BEEVOR, seconded by Dr. LITTLE, it was resolved:

That Mr. H. Stansfield Collier, F.R.C.S.Eng., be appointed Assistant Examiner in Surgery to the Apothecaries' Society of London, vice Mr. McAdam Eccles, who retires by rotation.

PHARMACOPOEIA COMMITTEE.

The report from the Pharmacopoeia Committee was received and entered on the minutes. The President said there was nothing to adopt; it was merely to report progress. He called attention to the fact that considerably more than 40,000 copies of the *Pharmacopoeia* had been sold, and it was still being sold at the rate of over 1,000 copies a year.

THE STUDENTS' REGISTRATION COMMITTEE.

The report of the Students' Registration Committee on exceptional cases, and recommending the addition of the City of Norwich Technical Institute to the list of recognized institutions approved by the Council, was approved and entered on the minutes.

FINANCE COMMITTEE REPORT.

On the motion of the President, who stated that it contained nothing in the way of recommendations, and was merely a report as to the state of the finances of the Council, and giving details, the report of the Finance Committee was entered on the minutes.

EXAMINATIONS FOR THE SERVICES.

The report of the Examination Committee on the returns as to examinations for the Services received since the last session of the Council was received and entered on the minutes.

The result of the analysis of the returns made by the Committee is shown in the table at foot of this page.

REPORT OF PUBLIC HEALTH COMMITTEE.

Sir JOHN MOORE, Chairman *pro tem.* of the Public Health Committee, moved that the following report of the Committee should be received, entered on the minutes, and approved.

The Committee considered the following resolution of the General Council adopted on November 28th, 1908:

That it be referred to the Public Health Committee to consider the advisability of substituting in Rule 1. of the resolutions and rules relating to public health, the words "nine months" in place of "twelve months," as at present. (Minutes, vol. xiv, p. 143.)

The Public Health Committee is of opinion that it is not advisable to substitute in Rule 1. of the resolutions and rules relating to public health the words "nine months" in place of the words "twelve months" as at present, for the following reasons:

1. The twelve months' curriculum was deliberately adopted by the Council after inviting and considering the views of examination bodies and a great number of teachers and instructors in the science and practice of public health.

2. The diploma in public health is a higher and post-graduate qualification—one which has always been regarded in the light of an honours qualification—and therefore one calling for sustained study to be undertaken solely in preparation for it.

‡ And 1 withdrew.

3. An interval of at least twelve months is commonly demanded by examining bodies between a pass examination and an examination for a higher qualification.

4. The existing scheme of the Council has worked well and successfully during many years. The diploma has obtained for itself a high status.

5. Not long ago a representation was made to the Council as to disabilities in the matter of obtaining the diploma in public health incurred by seniors in the profession, especially military and Colonial officers serving abroad, the length of whose leave is not sufficient to allow them properly to undergo the prescribed course.

For such men, therefore, the Council has granted indulgence in individual cases, and, relaxing the requirement of twelve months, has permitted them to complete their course in nine months.

6. The proposal referred to this Committee is to extend a like indulgence to quite junior candidates.

This proposal the Committee disapproves, believing that it would be a retrograde step—one little likely to prove of advantage to the public health administration of the United Kingdom and of the Empire.

The Committee also reported that correspondence was in progress with the India Office with regard to the recognition of sanitary staff officers as teachers.

Sir JOHN MOORE said that the reasons for the recommendation of the increase in the period from nine months to twelve months were fully set forth in the report, and had the approval of the Chairman of the Public Health Committee. It was quite true that the curriculum for the public health diploma could be completed in nine months; but it seemed to the Committee that, although that was the case, there was no hardship whatever in a candidate waiting for a further three months before receiving that very high qualification. Even if the further period was only to enable him to digest the information that he had received during the nine months, the Committee thought it would be a very good thing that he should wait. He hoped nothing whatever would be done by the Council to take away the very high status which its own qualification in the matter of public health had now received.

Dr. NORMAN MOORE seconded.

Mr. THOMSON thought the Committee had misunderstood the terms of the reference; and he was supported in that view by the reasons set forth in the report in favour of the recommendation. He had never applied, and he never would apply, for a reduction in the curriculum; but what he objected to was that the Council, having stated what its curriculum was, should endeavour to insist on a three months' period of enforced idleness at a period in a man's career when time was of the greatest value to him. He knew from experience that a man could fulfil all the conditions of the curriculum in nine months; but at present he was debarred, by what he (Mr. Thomson) considered a very foolish regulation, from entering for the examination until twelve months had elapsed from the date of his taking his degree to his entering into the examination. In his opinion that was penalizing a man, not only as to time but from the standpoint of money as well. All he asked was that a man who had fulfilled the curriculum should be allowed to enter for the examination. He was prepared to admit that this diploma was a high distinction; but it was stated in the reasons of the Committee that it was in the nature of an honours qualification. That the Council had nothing to do with; all it had to do with was to see, in the public interest, that a man taking the diploma was adequately educated.

The PRESIDENT remarked that the curriculum, to be carried out adequately, still required twelve months; but, owing to a great deal of pressure, the two half-years were allowed to overlap and telescope, as it were, so as to make the total period nine months in such a case. At the time the change was introduced no one regarded it as an ideal arrangement, but merely as an emergency which in certain cases would be allowed; but the notion that it should become the normal and necessary curriculum was repudiated by nearly every member of the Council. They were now practically asked to make it the normal and necessary curriculum, which he thought would be a great disaster, because it was perfectly obvious that for the student who had got his qualification the idea was that he should have six months' laboratory work and six months' outdoor work. It was inexpedient on the part of the Council now to alter its Regulations, which had been incorporated in the Rules and Regulations of the universities and licensing bodies. Although this Council had nothing to do with the honours examination, that was an

additional qualification on a post-graduate qualification, and, whether it was called honours or not, it was a very much higher qualification than the ordinary one.

Sir JOHN BARRY TUCKER said that, in order to maintain his consistency, he must enter his protest against this continuous whittling down of the Regulations. The diploma of public health must be a very high qualification, not only by reason of its importance but by reason of the fact that it was a qualification over which this Council exercised control. If the matter were pressed to a division he would certainly vote against it.

Sir CHRISTOPHER NIXON sympathized with Mr. Thomson in the remarks that he had made with reference to this diploma. The majority of those who undertook the duties of medical officer of health in Ireland had had no training in public health at all; but they had had a fair amount of instruction in the principles of public health in connexion with medical jurisprudence and hygiene, and they understood the duties of public health officers without any diploma in public health at all. If a man could do all that was required of him in a period of nine months, it would be a great hardship to that man that he should have to wait another three months in order to pass the examination. He contended that for a man who had the primary qualification and had got a fair amount of instruction in the principles of hygiene, the supplementary amount that would be acquired in the nine months was ample.

Sir CLIFFORD ALBUTT trusted there would be no unnecessary delay in granting the diploma. If it was to be a twelve months' course of instruction it should be twelve months. But the Council should decide in the first instance whether it intended it to be virtually a twelve months' or a nine months' period. He hoped the Council would not add any ornamental period to the curriculum. If it required the twelve months' guarantee of work done and time occupied in this special study he was disposed to think it would not be wrong, but if the work could be practically done in nine months, he would go further, and say that an additional three months was not a desirable period.

Sir CHARLES BALL reminded the Council that the reason why this overlapping had been recommended by the Public Health Committee was because it had been pointed out that a great hardship was inflicted on military men and others coming from India and the Colonies, who had only a year's leave. Part of that year was spent in coming from and going to India and other places abroad; and it was felt to be a great hardship that those men might be excluded from taking the Diploma of Public Health during their vacation. It was to meet that hardship that the recommendation was adopted. It was not intended that it should apply to graduates who had just completed their first course.

Dr. McVAIL, as one who had been a member of the Public Health Committee since its institution, pointed out that its first Chairman (Sir Richard Thorne) absolutely objected to any lowering of the curriculum or a shortening of the time. Its next Chairman (Dr. Bruce of Dingwall), who had had a long and close connexion with the work of public health in the North of Scotland, also strongly objected to it; and now Sir William Power, who was certainly an authority, who was greater than any other individual authority in the country, absolutely objected to the change. It was largely owing to Sir John Simon that this diploma was instituted, and entirely owing to him that this Council obtained control over it, and he held that it was not to be a slight addition to the knowledge of hygiene that a student got in an ordinary medical jurisprudence course. It was altogether something special, entirely different, on a different plane altogether. Every man connected with public health whom he (Dr. McVail) knew absolutely objected to anything which meant whittling it down to a period of nine months. There was too little practical work done already in the way of students' work with medical officers of health, and this should be increased rather than diminished. As Sir Charles Ball had said, the three months' concession was made at the urgent request of the Army and Navy Medical Service. There were many discussions on the subject, and it was with great reluctance that the Committee and its then Chairman finally agreed to it, but it was clearly on the understanding that it was to apply only to those men in the services and those men alone.

Sir THOMAS MYLES observed that a man who had been abroad for twenty years, and was therefore entirely unacquainted with the progress that had been made in those years, was allowed to do this course in nine months, whereas a man who was on the spot, with a highly trained intelligence, fresh from the schools, was penalized to the extent of another three months. In his opinion, nothing could be more illogical than that, and he wished to join with Mr. Thomson in protesting against this ornamental addition to the curriculum.

Sir THOMAS FRASER thought it would be extremely unfortunate if the Council at this time of day reduced the qualification in this most important subject. It would be unfortunate from the standpoint of the State, and it would be specially unfortunate having regard to the fact that since this regulation had been introduced there had been a remarkable growth of knowledge in connexion with public health. In India public health was recognized as one of the most important subjects, and he did not suppose there was a member of the medical profession there who was not required to do something in connexion with it. They in the North would very much deprecate any attempt to lower the curriculum in what was there regarded as the most important department of the public service.

Dr. ADYE-CURRAN hoped that whatever might be done the concession granted to the army and navy would not be interfered with in any way. A great number of army men who specialized in hygiene were very anxious to obtain the D.P.H., and if the period were made nine months instead of twelve it would be impossible for them to get it.

Mr. THOMSON moved:

That the report be referred back to the Public Health Committee for reconsideration.

There was no intention on his part of lowering the standard. The point was that if the Council required a nine months' curriculum it need not demand twelve months in which the man was to do it. A great deal had been said with regard to the expert's opinion on the subject. When these regulations were drawn up the Council had nothing to rely upon except the information of those experts, but since then it had the experience of the candidates. Therefore, he asked for more information on the subject.

Sir CHRISTOPHER NIXON seconded the amendment.

Sir JOHN MOORE, in reply, said that it was a remarkable circumstance that every one who opposed the adoption of the report was not a holder of a diploma in public health. He personally knew what the nine months' laboratory work meant, and it was too little. The remarks of Sir Clifford Allbutt showed how unfortunate it was that any diminution in the Council's regulations should have been made even in the case of the Army and Navy Medical Services. Sir Christopher Nixon had unconsciously misled the Council in connexion with the medical officers of health in Ireland and this qualification. The medical officers in Ireland were forced by Act of Parliament to be medical officers of health for their respective districts, and in not one instance was it necessary for a man to hold the D.P.H. qualification. When a man sought an appointment as medical officer of health for a population of not less than 50,000, then he must produce this diploma in public health. For such a man he believed twelve months was all too little to put him into a position to act efficiently as a medical officer of health. The dispensary medical officers were forced to do duties for very little pay and without any special training, but they were quite different to the medical officers of health, who held the Council's qualification and were obliged to hold it. The Council did not desire to penalize anybody, but it did want to ensure that a man had undergone a twelve months' curriculum in order to obtain the D.P.H. He hoped the Council by an overwhelming majority would approve the report.

Sir CHRISTOPHER NIXON, with the permission of the Chairman, explained that he could not say he was totally ignorant of the nature of the curriculum in connexion with public health, because he drafted the syllabus of the curriculum for the Royal University, which was adopted, and the idea that they had in their minds when forming the regulations for the D.P.H. was that there ought to be two grades established in connexion with the University. The

lower grade, a diploma representing the Council's requirements, would be quite sufficient for the ordinary class of medical officers of health, and then they proposed to give the higher degree to doctors in public health, and that would be applicable to the class of public health officers referred to by Sir John Moore, who had charge of a population of 50,000 or more. But the Council, in making these regulations for its diploma, ought not to be too exacting. It had to legislate for the rank and file of the profession, and it ought to legislate for the medical officers, for instance, in Ireland who were the recognized medical officers of health, but who had no diploma. The diploma ought to be brought down to the level of these men—sufficiently high to make it useful, but not at an impossible standard. He was strongly of opinion that Mr. Thomson was quite right, and all that would be needed from a man who took the D.P.H. could be amply fulfilled by a nine months' course.

The amendment was lost, and the original motion was then put and carried.

COMMITTEES.

The Council then went into camera to discuss private business.

The CHAIRMAN announced that the following gentlemen had been elected on the Committees indicated:

Executive Committee.—Mr. Tomes, Dr. Norman Moore, Sir Hugh Beaver, Dr. Langley Brown, Dr. McVail, Sir John Batty Tuke, Sir John Moore, and Sir Charles Ball.

Penal Cases Committee.—Dr. Saundby, Mr. Tomes, Dr. Finlay, and Sir Christopher Nixon.

DENTAL DISCIPLINARY CASES.

The Dental Committee presented a supplementary report, dated May 24th, 1909, with regard to the case of William John Watson, first considered by the Council at its meeting on May 28th, 1908, and further considered at its meeting on November 27th, 1908. The charges referred to the covering of an unregistered practitioner and advertising in the name of another practitioner; both of these charges were found not proved in May, 1908. With regard to certain irregularities with reference to issuing a pamphlet, and with particular reference to an undertaking given by Mr. Watson to discontinue the issue of all advertisements, he was required to present satisfactory evidence as to his conduct in the interval at the session of the Council in November, 1908. At that session Mr. Watson did not attend, and the further consideration of his case was adjourned. The supplementary report on the present occasion stated *inter alia* that the Committee could not regard the evidence presented by Mr. Watson as to his conduct in the interval as satisfactory, seeing that he was still connected with an unqualified man named Potter, who had been in the employment of Mr. Watson, and who, with Mr. Watson's knowledge, was in the employment of a company called Booth and Co., Limited, consisting of unqualified persons who continued to advertise from the addresses where Mr. Watson formerly carried on business.

Mr. WATSON, on being asked by the PRESIDENT if he had any remarks to make, said he was very anxious if possible to clear himself of the charge. He had been in practice for many years and had never had a charge brought against him. He had been Chairman of the Workhouse Committee at Birmingham, and had been for over twenty years a member of the board of guardians. He admitted that he had committed an error of judgement, for which he was very sorry, and he would take good care not to do it again. He placed himself in the hands of the Council, and hoped the Council would exonerate him from any intentional misconduct.

Mr. TURNER, who appeared for the complainants, the British Dental Association, said, in reply to the PRESIDENT, that he did not wish to appear unduly to press the charge against Mr. Watson; he thought it was desirable that the Council should give Mr. Watson a further period of probation, if he gave an undertaking to the Council to dissociate himself from the unregistered person referred to. Mr. Turner hoped that it would be understood that when an undertaking was given to the Council as to conduct the onus was on the person giving it to show that his conduct had been satisfactory, and not upon the complainants to prove that his conduct had been unsatisfactory. He suggested that the Council might

well let the matter stand over for six months in order that Mr. Watson might prove his good faith.

Mr. WATSON stated that the case had been going on for a year, and he hoped that the Council would not keep him under unnecessary suspense for another period of six months.

Dr. McVAIL asked whether Mr. Watson had been restored to the list of Licentiates of the Royal College of Surgeons of Edinburgh, and in reply Mr. WATSON said that he had not applied to be restored.

Strangers and parties were then ordered to withdraw. On their readmission,

The CHAIRMAN announced the judgement of the Council as follows:

Mr. Watson, the Council has again given careful consideration to the two reports of the Dental Committee and has deferred the further consideration of your case to November next, when you will be required to be present in person and to produce satisfactory evidence, and not merely a personal statement, as to your professional good conduct in the interval, with particular reference to your undertaking to discontinue all advertising, or connexion, direct or indirect, with those who are advertising.

The next case was that of Mr. Charles Morgan, as to whom the Dental Committee had presented a report to the meeting of the Council on November 28th, 1908 (SUPPLEMENT, December 5th, 1908, p. 301). Mr. Poley, who appeared on behalf of Mr. Morgan, then gave an undertaking that Mr. Morgan would in future conduct his practice in a professional manner. The case was deferred for the attendance of Mr. Morgan during the present session, when he would be required to present satisfactory evidence as to his professional conduct in the interval, with special reference to the promise to discontinue to issue all advertisements. The supplementary report now presented by the Dental Committee was to the effect, *inter alia*, that Mr. Morgan continued to advertise on the curtain of the Empire Theatre, Newport, in pursuance of a contract with an advertising agency entered into in July, 1908. The Committee had before it no evidence of any written application to the advertising agency to discontinue the advertisement or of any serious attempt by Mr. Morgan to put an end to it. The complainants were the British Dental Association.

Mr. POLEY, in reply to the PRESIDENT, stated that Mr. Morgan had loyally carried out his undertaking, and had tried to stop the advertisements appearing; the manager of the company gave evidence before the Committee that it could not put an end to the advertisement. That placed Mr. Morgan in a curious and very serious position. After the meeting of the committee his client pointed out what a very serious matter it was to him that the company should take up the attitude that it did, and he was happy now to be able to say that he had received a letter from the company in which it stated that, under the exceptional circumstances, it was prepared to allow the advertisement now appearing to be eliminated. Under those circumstances he asked the Council graciously to let the matter stand over for six months in order to show Mr. Morgan's bona fides.

Strangers and parties were ordered to withdraw. On readmission,

The PRESIDENT announced the judgement of the Council as follows:

Mr. Morgan, the Council has given very careful consideration to the reports of the Dental Committee, and has deferred the further consideration of your case to November next, when you will be required to be present and to offer satisfactory evidence, other than your own statement, as to your professional good conduct in the interval, with particular reference to your promise to discontinue the issue, direct or indirect, of all advertisements.

The next case was that of Samuel David Davis. Mr. Turner again appeared for the complainants, the British Dental Association, and Mr. Davis appeared in person.

The REGISTRAR read the report of the Dental Committee:

The complaint against Samuel David Davis having been referred to the Dental Committee to ascertain the facts, the Dental Committee beg to report as follows:

On May 24th, 1909, the following parties with their witnesses attended before the Committee and were duly heard:

The complainants, the British Dental Association, represented by Mr. R. W. Turner, Counsel, instructed by Messrs Bowman and Curtis-Hayward, Solicitors.

The said Samuel David Davis, represented by Mr. Percy J. H. Robinson, solicitor, of London.

The Committee find that the following facts were established by the evidence:

The said Samuel David Davis was registered in the *Dental Register* on October 9th, 1878, as "in practice before July 22nd, 1878." His address in the *Register* for 1909 is Beech House, 66, Queen's Road, Wisbech.

The said Samuel David Davis entered into an agreement on July 26th, 1906, with F. W. Bradley, Ltd., acting by Frederick William Bradley the chairman of the company, to serve the company as dentist and general assistant at Wisbech and at such other places as the company might determine. The said Samuel David Davis undertook by that agreement to devote his whole time to such service and to carry out the directions of the said F. W. Bradley or other the directors of the company. The remuneration paid by the company to the said Samuel David Davis is £4 s. a week and 5 per cent. commission on all cash received in respect of orders taken by him. F. W. Bradley, Ltd., is a company incorporated under the Companies Acts to take over and carry on a dental practice formerly carried on by one Frederick William Bradley at 6, Market Street, Wisbech, the Castle, Wisbech, and numerous branches in the eastern counties. The capital of this company is £20,000, the whole of which was issued as fully paid up, and no part of which was paid up in cash; 19,733 £1 shares are owned by the said F. W. Bradley, 101 by Mary Bradley, his wife, 101 by William Wade Langley, a brother-in-law of the said F. W. Bradley, and the remaining 65 by thirteen other persons. Frederick William Bradley is chairman and managing director of the company, the other directors being the said Mary Bradley and W. W. Langley. Neither the said F. W. Bradley nor any other director or shareholder is a registered dentist.

Until April 15th, 1909, the business at No. 6, Market Street, Wisbech, was carried on in the names of W. Foot, surgeon-dentist, and Claude L. Sutton, surgeon-dentist. These persons are registered dentists, but neither of them has practised in Wisbech for a long time, and the business is, in fact, carried on under the management of the said F. W. Bradley by the company. The said F. W. Bradley purchased the dental practices of both these persons and the right to use their names, and transferred the same to the company.

The report concluded by enumerating the items of evidence before the Committee.

Mr. DAVIS, in reply to the PRESIDENT, said that he could only express his very great regret and sorrow. When he joined the firm of Messrs. Bradley he found certain registered dentists there, and he thought that, if it was proper for them to do the work, he was entitled to do the same. He asked the Council to give him time to consider his position.

Strangers and parties were directed to withdraw. On readmission,

The PRESIDENT announced the decision of the Council as follows:

Mr. Davis, I have to inform you that the Council has given careful consideration to the report of the Dental Committee, and that they have judged you to have been guilty of infamous and disgraceful conduct in a professional respect, and have directed the Registrar to erase from the *Dentists Register* the name of Samuel David Davis.

The Council then proceeded to the consideration of the case of Frederick Joseph Whitehead, registered as in practice before July 22nd, 1878.

The PRESIDENT stated that the defendant had had notice that the report was to be brought before the Council and did not appear, and that the Council would therefore proceed with the consideration of the case in his absence.

The complainants were the British Dental Association, represented by Mr. Turner.

The REGISTRAR read the report of the Dental Committee, which stated *inter alia* as follows:

The said Frederick Joseph Whitehead knowingly and wilfully assisted an unregistered person named Frederick William Bradley to carry on practice as a dentist at Wisbech and elsewhere under the names or styles of W. Foot, surgeon-dentist; Claude L. Sutton, surgeon-dentist; and F. W. Bradley, Limited—the said F. W. Bradley, Limited, being a company of which the said Frederick William Bradley had control as chairman and managing director, and who held 19,733 shares out of a total of 20,000. No director or shareholder of the company is a registered dentist. The said Frederick Joseph Whitehead also knowingly and wilfully assisted the said company in carrying on practice as dentists at Wisbech and elsewhere by means of unregistered persons in their employ.

The items of evidence before the Committee were enumerated.

Strangers and parties were directed to withdraw. On readmission,

The PRESIDENT announced the judgement of the Council as follows:

Mr. Turner, I have to announce that the Council has given careful consideration to the report of the Dental Committee, and has judged Mr. Frederick Joseph Whitehead to have been guilty of infamous and disgraceful conduct in a professional

respect, and has directed the Registrar to erase from the *Dentists Register* the name of Frederick Joseph Whitehead.

The next case to be considered was that of Reuben Davis, registered as in practice before July 22nd, 1878. His address in the *Register* for the current year was Boston, U.S.A.

Mr. Davis did not appear, and the Dental Committee reported that he had been convicted on April 16th, 1908, at the Bath Petty Sessions, of stealing twelve pairs of forceps, and sentenced to three months' hard labour; and on September 2nd, 1908, at the Gloucester Petty Sessions, of stealing a watch, money, etc., and sentenced to two months' hard labour; and on December 31st, 1908, at the Wigan Petty Sessions, of certain petty thefts, and was sentenced to fourteen days' imprisonment. The evidence before the Committee consisted of certified copies of the several convictions. The complainants were the British Dental Association.

Strangers and parties were ordered to withdraw. On readmission,

the PRESIDENT announced the judgement of the Council, as follows:

I have to announce that it having been proved that Reuben Davis has been convicted of various misdemeanours as set forth in the report of the Dental Committee, the Registrar has been directed to erase from the *Dentists Register* the name of Reuben Davis.

The next case was that of Stanley Bennett Wakefield, registered as in practice before July 22nd, 1878.

The PRESIDENT said that Mr. Wakefield was not present, but had sent a letter.

The complainants were the British Dental Association, and the evidence before the Dental Committee was to the effect that (1) the accused had been convicted at Marlborough Street Police-court of illegal pawning; and (2) that he had made a false and fraudulent claim to the executors of a deceased person for professional services alleged to have been rendered. The evidence before the Committee was enumerated in the report.

Strangers and parties were ordered to withdraw. On readmission,

the PRESIDENT announced the decision of the Council as follows:

I have to announce that it having been proved that Stanley Bennett Wakefield has been convicted of a misdemeanour, the Registrar had been directed to erase from the *Dentists Register* the name of Stanley Bennett Wakefield.

The next case was that of Thomas Parkins, registered as in practice before July 22nd, 1878. Mr. K. W. Turner represented the complainants, the British Dental Association; Mr. Parkins appeared in person.

The REGISTRAR said the Dental Committee had found the following facts were established by the evidence:

The said Thomas Parkins lives at Salford, but a dental practice is carried on in his name at Sharrow Head House, Sharrow Head, Sheffield, by his son Charles Henry Parkins, who is an unregistered person who habitually performs dental operations there, and signs receipts for accounts paid by patients for work done by him in the name of the said Thomas Parkins.

Mr. PARKINS, in reply to the PRESIDENT, said that the business which he had conducted had been his own business for some years. He admitted that his son did assist him in his business, but under his supervision. He was teaching his son the business. Until the notice was served upon him he was not aware that he was committing a breach of the *Dentists Act*. He was very sorry indeed that the complaint was made against him, and he was totally ignorant of the fact that he was doing anything wrong by employing his son to assist him.

Mr. TURNER submitted that the letters which had been written to the Council did not suggest that Mr. Parkins was simply teaching his son.

Counsel, parties, and strangers were directed to withdraw. On readmission,

the PRESIDENT announced the decision of the Council as follows:

Mr. Parkins, I have to inform you that upon the facts found in the report of the Dental Committee the Council has judged you to have been guilty of infamous or disgraceful conduct in a professional respect, and has directed the Registrar to erase from the *Dentists Register* the name of Thomas Parkins.

Mr. PARKINS: I can only say that at my time of life I think it rather cruel after having been on the *Register*

since the passing of the Act in 1878. I am sorry to hear it.

The PRESIDENT: That closes the case.

Mr. PARKINS: Is that the best you can do for me, or rather the worst. I think it is rather cruel. Excuse me, gentlemen, for my remarks, but I feel it very much, after having been nearly thirty-one years on the *Register*.

The PRESIDENT: There is nothing more to be said.

Mr. PARKINS: I was not aware I was doing anything wrong. I was totally ignorant of it. I have had a large family to bring up. It is very hard that I should be removed from the *Register* now; it is very hard indeed.

ADMINISTRATION OF ANAESTHETICS FOR UNREGISTERED DENTISTS.

The Council, after a short sitting to consider a matter *in camera*, then proceeded to the consideration of the case of Thomas Torrens McKendry, registered as of 39, Wellwood Road, Goodmayes, Ilford, Essex, M.B., Bac. Surg. 1894, R. Univ. Irel., who had been summoned to appear before the Council on the following charge as formulated by the Council's solicitor:

That you have knowingly and wilfully on various occasions, and in particular on the 20th day of February, 1909, assisted one E. C. Dalby, a person not registered as a dentist, in carrying on practice as a dentist by administering anaesthetics on his behalf to persons coming to him for treatment, and that in relation thereto you have been guilty of infamous conduct in a professional respect.

The complainant was Dr. Victor Albert Chatelain.

Mr. Lushington appeared as legal assessor; Mr. Winterbotham appeared as solicitor. The complainant and also the respondent appeared in person.

Dr. CHATELAIN said the charge against Dr. McKendry was of administering an anaesthetic on the morning of February 20th last to a Mrs. Flynn, thereby enabling an unregistered person to practise dentistry in the district of Seven Kings. When Dr. McKendry did this he knew that what he did was wrong, because he had been warned on at least two occasions by a registered dentist named Stevens, practising at Ilford; that Mr. Dalby was an unqualified and unregistered person; and that by assisting or covering him in any way he was contravening the regulations of the Council, and also rendering himself liable to penalties. He (Dr. Chatelain) had been practising in the neighbourhood for about four years, and the subject of Dr. McKendry's covering of Dalby was a matter of general comment among practitioners in that neighbourhood.

Mrs. FLORENCE JANE CHATELAIN, examined by Dr. Chatelain, said that on the morning of February 20th Dr. Chatelain received information from Dr. Davey that Dr. McKendry was going to administer an anaesthetic to Mrs. Flynn at the house of Mr. Dalby. She was instructed to proceed there to watch, which she did, and she saw Mr. McKendry leave the house, and then, about two minutes afterwards, Mrs. Flynn came out and went away in her motor car. Dr. McKendry was not Mrs. Flynn's usual medical adviser.

Dr. McKendry did not wish to cross-examine.

Mr. WM. RAYMOND BRYANT, examined by Dr. Chatelain, said he was a friend of Mrs. Flynn's and other members of her family; she had mentioned to him that she had gone to Mr. Dalby's house to have some teeth out on a Saturday, and that Dr. McKendry had administered an anaesthetic. Dr. McKendry was not her usual medical adviser.

Dr. McKendry did not wish to cross-examine the witness.

By Mr. LUSHINGTON: He personally knew nothing about Dr. McKendry administering the anaesthetic except what he had been told.

Dr. Chatelain then put in a declaration by Mr. Richard Henry Stevens, a registered dentist, of Ilford, to the effect that on two occasions he had told Dr. McKendry at his surgery that Mr. Dalby was not a duly registered practitioner as required by the *Dentists Act*, 1878; and that, by attending for the purpose of administering an anaesthetic to Mr. Dalby's patients, he rendered himself liable to penalties for covering Mr. Dalby in carrying on the profession of a dentist contrary to the Act.

Dr. JOSEPH BETHEL COX, a registered medical practitioner, examined by Dr. CHATELAIN, said he had been practising at Seven Kings for some years. He had had occasion to administer gas for Mr. Stevens of Ilford

many times; and, in the course of conversation, the latter complained to him that Dr. McKendry was covering Mr. Dalby by administering anaesthetics. The last occasion was about eighteen months ago. He was acquainted with the majority of the practitioners in that district, amongst whom it was common knowledge that Dr. McKendry was covering Mr. Dalby in the manner alleged.

Cross-examined by Dr. McKENDRY: He could not say how many times he had heard it so stated. He did not know that patients were sent by other medical men in the district to Mr. Dalby for treatment, nor that he attended medical men and their families.

By Mr. LUSHINGTON: He knew of Dr. McKendry administering anaesthetics from one or two of his patients who had been to Mr. Dalby, and also from Dr. McKendry himself. That might have been before Mr. Stevens had warned Dr. McKendry of the penalty he was incurring.

Mr. CHATELAIN stated that he had endeavoured to get the medical practitioners who had given him particulars of the specific instance which enabled him to bring the case before the Council to come and give evidence, but they declined to do so.

Cross-examined by Dr. McKENDRY: The charge was brought solely with a view to getting the practice of covering quacks discontinued. He had no animus whatever in the matter. He would have warned Dr. McKendry personally, but on a previous occasion he had behaved in such a manner that he (Mr. Chatelain) could not approach him.

This closed the case on behalf of the complainant.

Dr. McKENDRY admitted that he gave gas on the specific occasion. He was medical attendant to Mr. Dalby, and that night he received a note asking him to call. He walked into the operating room the next morning, when Mr. Dalby introduced a lady, and said, "You don't mind giving gas to this lady, do you?" He (Dr. McKendry) found himself in a difficulty, because, if he had refused, it might have caused a disturbance. Unfortunately he assented, and later on he told Mr. Dalby that he was very much annoyed about it, and that he would not do it again.

Cross-examined by Mr. CHATELAIN: He never knew Mrs. Flynn before giving her the gas, and was not her usual medical attendant. He was not aware that Mr. Davey had refused to give her an anaesthetic, or that she had said, "If you will not, I will go to Dr. McKendry." This was the first time he had heard of it.

By Mr. LUSHINGTON: He had not got the note Mr. Dalby sent to him asking him to call; he had destroyed it. Mr. Dalby and his family had been patients of his for several years, and he knew what his business was. It never occurred to him to ascertain whether Mr. Dalby was a registered dentist, and to the best of his recollection Mr. Stevens never mentioned to him the fact of his being an unregistered man. It was absolutely untrue that he had administered an anaesthetic for Mr. Dalby to a patient of Dr. Cox, but he had administered anaesthetics on a few occasions other than this specific one. The last occasion on which he had done so was in September or October last. At that time he knew Mr. Dalby was an unregistered man.

Mr. HENRY CHARLES DALBY, in reply to Dr. McKENDRY, said he remembered the incident of February 20th with regard to Mrs. Flynn. When he sent the note to Dr. McKendry he did not specify the object of his call; it was the only occasion on which he had sent such a note. The account which Dr. McKendry had given with regard to the case of Mrs. Flynn was correct. He (Mr. Dalby) had received patients from about half a dozen other medical men in the district, and their own families had also been to him.

Cross-examined by Mr. CHATELAIN: He could not give the names of the medical men whom he had attended, other than that of Dr. Davey and Mrs. Davey. He attended Dr. Davey last year. He could not say whether Dr. Davey knew at that time that he was an unregistered man. At the time Dr. McKendry came to him he had no idea what he had been brought for, and, when he did know, he was very angry about it. The other occasion on which Dr. McKendry had administered an anaesthetic before the occasion in question was to one of his own patients.

Mr. CHATELAIN, in addressing the Council, disclaimed any animus with regard to the charge. All the prac-

titioners in the neighbourhood lived more or less in amity, and it was solely with a view to the discontinuance of the practice of covering quacks that he had brought it. That Council was the only body before which a practitioner could lay his grievance. He was not speaking only for himself; he voiced the sentiments of the large majority of his fellow practitioners in the neighbourhood of Seven Kings, Goodmayes, and Ilford in bringing this matter forward. He would remind the Council that the witness Dalby was not on oath when he dared to state he had attended on medical practitioners and their families, including Dr. Cox, who assured him (Mr. Chatelain) that Mr. Dalby had never done so.

Strangers and parties were directed to withdraw. On readmission,

The PRESIDENT informed Dr. McKendry that the Council had found the facts alleged against him proved to its satisfaction, but, as it was understood that he wished to make some appeal to the Council, the opportunity was now given him to say what he had to say before the Council proceeded to the next step, that of pronouncing judgement. In his statement the defendant had said: "I desire to express my regret to the Council for my lapse; and I also promise faithfully not to repeat the offence." The President added: The facts alleged against you are found to be proved, that you have repeatedly done this. Do you wish to express regret with regard to that?

Dr. McKENDRY: I am very sorry indeed, and I am very glad that this has been brought up, for it will put a stop to the whole thing. This was the first time Mr. Dalby had asked me to give gas to a stranger, and I did not know what I was to do until I got into the operating-room.

The PRESIDENT: We are referring to the other cases now.

Dr. McKENDRY: I will guarantee never to repeat the offence.

The PRESIDENT: Do I correctly understand you to give the Council an assurance that you will never repeat the offence?

Dr. McKENDRY: I do, sir; I will never repeat it under any circumstances.

Strangers and parties were again directed to withdraw.

On readmission, the PRESIDENT announced the decision of the Council as follows:

Mr. McKendry, the Council has postponed judgement till the November session, when you will be required to attend in person and to produce evidence, more particularly from medical colleagues in your neighbourhood, as to your professional good conduct generally in the interval, and in particular that you have not repeated the offence of which complaint has been made.

REPORT OF THE EDUCATION COMMITTEE.

A supplementary report from the Education Committee in continuation of that presented in November last was received and entered on the minutes.

SUPPLEMENTARY REPORT

BY THE

EDUCATION COMMITTEE

ON

VARIOUS PROPOSALS SUBMITTED TO THEM REFERRING TO THE CURRICULUM IN MEDICINE.

MEMBERS.—Dr. Mackay, *Chairman*: The President; Dr. Norman Moore, Sir George Philipson, Sir John Williams, Sir John Batty Tuke, Sir Thomas Myles, Sir Christopher Nixon, and Dr. Little.

I.—PRELIMINARY STATEMENT.

Direct reference is made to the report of the Education Committee presented to the Council in November, 1908, and printed in Vol. xlv of the Minutes, p. 359. This report was briefly debated in the Council on November 28th, 1908, and was "referred back to the Education Committee for further consideration and report to the Council at a future session."

The report of 1908 dealt with various proposals which have been remitted to the Committee during the last few years. It is unnecessary to repeat here the text of the several proposals referred to; the following brief summary will suffice:

1. That the preliminary sciences, Biology (Botany and Zoology), Physics, and Chemistry be transferred from the

curriculum to a stage preliminary to the commencement of medical studies.

2. That the curriculum be extended to six years, or, alternatively, to five years, the preliminary sciences being excluded.

3. That the last year of study be devoted exclusively to clinical work.

4. That the subjects embraced in the curriculum be divided into (a) two, or (b) three groups, and that no study in a later group be recognized as qualifying until the professional examination in the subjects of the earlier group has been completed by a student.

5. That a minimum of two years be devoted to the subjects of the Final Examination.

In their last report the Education Committee have dealt with the period of study as a continuous whole, and no notice has been taken of vacations: no other course has been possible. Vacation periods of three months' duration are usually devoted largely to study when they precede a professional examination; when they follow an examination, on the contrary, they are probably not so fully occupied by medical work. The statistics set forth in the several tables must be regarded as reasonable approximations rather than as exact numerical statements of the facts.

II.—THE GENERAL CONSIDERATION OF THE PROPOSALS REMITTED TO THE COMMITTEE.

1. *That the preliminary sciences, Biology (Botany and Zoology), Physics, and Chemistry, be transferred from the curriculum to a stage preliminary to the commencement of medical studies.*

All are agreed that the knowledge to be derived from the study of the preliminary sciences is to be considered an essential part of the equipment of a medical man, but it is argued, on the one hand, that the subjects in question form in reality part of a general education, and that therefore the teaching of them may be relegated to the ordinary schools of the country, the maintenance of a sufficient standard being safeguarded by an appropriate examination before the commencement of the medical curriculum. On the other hand, it is held that in the case of a medical student there is demanded, in addition to the acquisition of general principles, a specialized knowledge of the sciences in their direct application to medical practice and research, and that this necessary end can only be followed out in a school of medicine, or in some similar institution under teachers cognizant of the aims of medical education.

The question is one which may possibly be submitted at some future date to the judgement of the Council. A consideration of the educational conditions of the present day has convinced the Committee that the time is not yet ripe for its discussion. The Council cannot, without disregard of the interests specially committed to its care, permit the discharge of an important educational duty to be withdrawn from its supervision until at least it has clearly satisfied itself that under the new conditions the teaching work will be adequately performed. Without any disparagement of the standard which has been reached generally, and with full recognition of individual instances of high efficiency, it is to be said, that the secondary and higher-grade schools of the country are not yet in a position to undertake the control of the instruction in the preliminary medical sciences. The schools must devote for some time yet the greater part of their energies to the effort to raise throughout the country the standard of general education, their first and most immediate concern, to a more satisfactory level than it occupies at present. Proof is afforded in the statistics recently submitted to the Council by the Education Committee showing the ages at which students enter upon the medical curriculum (vol. xlv, p. 279). Two series of figures are contained in the report referred to: the earlier deals with the group of students who qualified in 1906, and who, in the majority of cases, commenced study somewhere in the decade between 1891 and 1901; the later deals with the entrants of the year 1903. The standard demanded in the preliminary examination is an important factor in determining the age of the student at entrance, and in the case of those entering under the age of 21 years it is probably the dominating element. In the earlier group the average age of those under 21 at entrance was 18 years 6 months; in the later group it was greater by, practically, three months. The difference between the figures shows that while the standard of examination had been raised in the interval, owing to the action of the General Medical Council, the schools of the country had not been able to keep pace with the advance. The preliminary examination for entrance to study in medicine is a junior examination, and under

satisfactory educational conditions should be passed by youths at the age of 16½ or 17 years at the latest. In the earlier series of figures 12.5 per cent. of the total number of entrants are shown to have passed at 17 years or under; in the later only 7 per cent. of the total are shown to have qualified for entrance at that age. The Council has declared its intention of adopting, whenever the course becomes possible, the senior standard of examination which ought to be attainable by youths of 18 or 19 years, an age beyond which the school curriculum cannot with advantage be prolonged. But in the present circumstances, were the Council to carry out its intention the step would have the probable result of lengthening the period of school attendance or to beyond the close of the 20th year in the majority of instances. Indications are not wanting that educational conditions throughout the country are improving, but a considerable advance is still required.

In the circumstances it does not seem desirable that fresh responsibilities, as contemplated in the proposal under discussion, should be thrown upon the schools; a failure on the part of the schools to meet these responsibilities to the full extent would be prejudicial to the interests of medical education.

In another and more direct way the inadequacy of the schools to undertake the work which it is suggested in the proposal to assign to them has of recent years been demonstrated to the Council. In 1903 an inquiry into the methods of instruction adopted and the standard reached in teaching the preliminary medical sciences in a number of selected schools recognized by certain of the licensing bodies was carried out by the Education Committee. The report of the Committee (vol. xl, p. 709) led the Council to adopt a resolution to the effect that in many of the cases the courses of study were insufficient (ibid., p. 91).

After an elaborate investigation undertaken by a specially appointed Committee, the Council adopted a series of resolutions in which the minimal standard of teaching and examination to be required in biology, physics, and chemistry were clearly defined (vol. xli, pp. 58, 61, 147). Although the inquiry would have only an indirect bearing upon the issue involved in the question at present under discussion, a question which refers to the schools of the country generally, it would undoubtedly be of much interest to the Council to learn how far the selected schools recognized by several of the licensing bodies have been able to meet during the last five years the materially increased demands which have been formulated, whether by the Council or by the licensing bodies themselves, in respect of the preliminary medical sciences. Full information as to the numbers and qualifications of the candidates who have completed their first-year examination upon the strength of a school curriculum of study will doubtless be willingly supplied by the licensing bodies on the request of the Council, but a reasonable time must be granted to the selected schools in which to adapt themselves to the added requirements.

In their statistical report of November, 1908, the Education Committee dealt with the curricula followed out by all the students who registered as practitioners in the year 1906. In the case of these students the study of the preliminary sciences was carried on at a period prior to the adoption of the Council's regulations defining the minimal standard of teaching and examination. It is to be noted, however, that in no single case was the first-year examination passed on the strength of a school curriculum alone, and that, at the shortest, the period of study spent on the preliminary sciences in a school of medicine or approved teaching institution was of six months' duration.

In view of all the facts the Education Committee do not recommend the exclusion of chemistry, physics, and biology from the curriculum of medical studies.

2. *That the curriculum be extended to six years, or, alternatively, to five years, the preliminary sciences being excluded.*

The addition of a year to the curriculum would be a serious step, which could only be justified by a general desire for the change on the part of the licensing bodies, or by a report from the Council's inspectors and visitors to the effect that there is evidence of insufficient qualification for practice among the candidates who are successful in the final examination. The Education Committee have had no information before them to show that the present curriculum is actually insufficient in length. The average length of the curriculum as it is followed throughout the country at the present time is nearly seven years (6, 11.3). Of the licentiates of 1906, 13.8 per cent. qualified in a five years' course, 34.9 per cent. completed medical studies in the sixth year, 18.1 per cent. in the seventh, and 12.9 per cent. in the

eighth year. These figures show that the licensing bodies, assisted by the periodical inspections on the part of the Council, are maintaining a high standard of examination, by which the length of the course is automatically regulated in accordance with the abilities of the student. The Education Committee do not think it necessary to refer the question directly to the licensing bodies at the present moment. They believe that the effort should first be made to find out to what extent the complaints as to insufficiency of time, which have reached the Council from the teachers of the final subjects, can be met by rearrangements within the present curriculum.

The Committee does not recommend at the present the addition of a year to the curriculum in medicine.

3. *That the last year of study be devoted exclusively to clinical work.*

This proposal has already been reported upon by the Education Committee (vol. xliii, p. 553, 1906), and their opinion that it would be inadvisable to seek to prevent altogether any theoretical study or attendance at lectures in the final year has been homologated by the Council (vol. xliii, p. 145).

No. V of the Council's Recommendations in regard to professional study now stands as follows:

The fifth year shall be devoted to clinical work at one or more public hospitals or dispensaries, British or foreign, recognized by any of the medical authorities mentioned in Schedule (A) of the Medical Act (1858).

4. *That the subjects of study embraced in the curriculum be divided into (a) two or (b) three groups, and that no study in a later group be recognized as qualifying until the professional examination in the subjects of the earlier group has been completed by the student.*

Overlapping study between subjects is, of course, an essential feature of the medical curriculum, and it will be seen from the tables presented in the report that almost all the licensing bodies permit overlapping study between the examination groups of subjects; indeed, in most of the cases, overlapping of this kind is necessitated by the arrangements of the curriculum. The constitution of the examination groups is to a large extent a matter of practical convenience, and there would seem to be no good reason theoretically why the study of the several groups should not overlap to some extent at least, for instance, why chemistry and anatomy should not be studied together, or why the work in the later stages of anatomy and physiology should not coincide in time with the earlier stages of study in pathology and pharmacology.

The most common arrangement of the curriculum among the bodies is one in which the first two years are allotted to the preliminary sciences and to anatomy and physiology, the subjects of the first period of the table contained in the report (p. 375), the last two years to pathology, surgery, medicine, midwifery, etc., the subjects of the second period of the table, and the third year is shared between the two periods. This arrangement roughly divides the curriculum into two, assigning almost equal portions to each period, and owing to the overlapping in the third year it has the advantage of a certain amount of elasticity, permitting retardation at one stage to be compensated for by added effort and concentration of work at another. In the opinion of most of the licensing bodies some elasticity in the structure of the curriculum is essential; but there is, on the other hand, a danger to be safeguarded against, namely, that the retardation of the earlier period may cause serious encroachment upon the later period of the course. That some encroachment of this kind does take place in many cases, and though by no means in all, in some to a considerable extent, is made evident in the statistical tables of the report. Column 9 (p. 375) shows the whole amount of delay incurred by the average student, and the two sections of column 8 show the proportion in which the added months were shared between (a) the study of the subjects of the first period of the course and (b) the undivided study of the subjects of the second period. On account of overlapping study, however, in the great majority of the bodies the subjects of the second period received some of the time added to the curriculum by the retardation of the first period examination. Column 7 of the table is drawn up on the assumption that the first period retardation was shared equally between the study of the subjects of the two periods. This was probably the case in the majority of the instances, but certainly not in all, and the truth must lie somewhere between the figures of columns 7 and 8. The time added to final study is somewhat more than that shown in the second section of column 8, somewhat less than that shown in the second section of column 7. Comparison will show that in many of the cases the addition to the time allotted to second period studies is proportionately much less than

it should be. The figures refer to the average student; a study of the tables of the individual licensing bodies (pp. 380-395) will show that in the cases of the groups of students who pass through the course in less than the average time (fifty-seven to sixty-three months) there are many instances in which actual encroachment upon final study has taken place.

The proposals under discussion seek to prevent all time encroachments of earlier upon later studies, but it is evident that if carried into effect they would destroy altogether the elasticity of the curriculum which arises from the recognition of overlapping studies. This in many cases would amount to actual hardship towards the student. Very many of the bodies hold their professional examinations on two occasions only during the year, and give qualifying lecture courses in each of the subjects of the curriculum once only in the year. A concrete example will illustrate the hardship which may arise in these circumstances under the proposed regulations. A student who has sat for his preliminary science examination at the close of his first year would be entitled upon the successful completion of the examination to pass on in the second year to the qualifying study of anatomy and physiology. But if he fail short in one of the four subjects of the first examination—say, in botany—the whole of the second year will be lost to him, as he will have no opportunity of taking out qualifying classes in anatomy and physiology until his third winter. The penalty for failure in cases such as that quoted is so excessive that it is obvious that either the whole course will be unduly prolonged or that the standard of the examinations will be lowered in view of the serious consequences of rejection. The student so retarded may give up medical study for the lost year, with the exception, possibly, of some homework in the subject in which he has failed; certainly there are many who will be disinclined to pay the fees for classes which do not qualify for the licence to practise.

The proposals under discussion are too drastic to be likely to be successful, and it is practically certain that they would not be acceptable to the great majority of the licensing bodies. The Education Committee cannot recommend the adoption of the proposals, more particularly as they believe that the prevention of undue time encroachment upon the later studies can be realized by means less likely to give rise to opposition.

5. *That a minimum of two years be devoted to the subjects of the final examinations.*

The Committee do not regard the length of the minimum period defined in this proposal as sufficient. They hold that if clinical work is to have reasonable recognition in the curriculum, approximately half of the whole period of study should be devoted to the subjects of the second period of the tables.

III.—RECOMMENDATIONS OF THE COMMITTEE.

The Committee believe that a period equivalent at least in time-value to twenty-seven months of undivided study should be allotted to the subjects for the final examination, half-value being granted to periods of overlapping study. With the majority of the licensing bodies the last two years of the curriculum contain only twenty-one months. This being allowed for, it will be seen that the proposal implies that in cases where there is no overlapping the undivided study of the final subjects must be begun when the minimal course is to be followed, in the middle of the third year. In many of the licensing bodies the completion of the examination of the first period does not take place until this point has been reached. It is, however, the practice among these bodies to commence the work for the final examination at the beginning of the third year. In the cases referred to, the student, when no hindrance takes place, completes his course in fifty-seven months, and, on the principle of allowing half-value for overlapping study, out of this total devotes the equivalent of thirty months' study to the final subjects, and twenty-seven months to those of the first period.

When the work for the final examination begins at the commencement of the third year, a delay of six months in the completion of the first period examination may be compensated for according to the principles involved in the proposal, but any further delay will necessitate an addition to the final portion of the curriculum. The subjoined table (p. 367) sets forth the details of the scheme.

It is obvious, however, that if the work for the final examination be commenced in the course of the second year of the curriculum the penalty for delay in passing the first period examination might be avoided in whole or in part. The institution of a minimal time-value limit for second period necessitates the taking of a similar action in

Date of Commencement of Work for Final Examination.	Date of Completion of Examination in Anatomy and Physiology.	Length of Period of Study for Final Examination.				Total Length of Curriculum.
		Months.				
		Months.	Overlapping Study.	Undivided Study.	Total.	Equivalent Value of Total.
Beginning of third year	30	6	27	33	30	57
“ “	36	12	21	33	27	57
“ “	42	18	18	36	27	60
“ “	48	24	15	39	27	63
Middle of third year	30	—	27	27	27	57
“ “	36	6	24	30	27	60
“ “	42	12	21	33	27	63
“ “	48	18	18	36	27	66
Beginning of fourth year	36	—	27	27	27	63
“ “	42	6	24	30	27	66
“ “	48	12	21	33	27	69

regard to the first period. The natural course would be to recommend in the case of the first-period subjects a minimum limit of study equivalent in value to twenty-four months of undivided study. There is, however, a difficulty in the way of taking this step, because, in the case of certain of the licensing bodies, those which recognize school study in the preliminary sciences before the commencement of the medical curriculum, some of the students complete the examination in anatomy and physiology in a period of eighteen months from the beginning of professional study. The difficulty may be met, practically, by adding to the original recommendation a rider to the effect that final study earlier than the third year of the curriculum shall not be taken into account in reckoning the time-value of the final period.

It will be generally conceded that, apart from overlapping study, some period of actual undivided study should be safeguarded for the subjects of the final examination. It is important that it should be made possible for the student to devote the last full year of the course entirely to clinical work, and for this end, taking into account the incidence of the autumn vacation, it may be suggested that a minimum period of fifteen months of undivided study should be required for the final subjects. By many, however, this will be regarded as insufficient, and it would not be an unreasonable position to take—to hold that the recognition of overlapping study should be confined entirely to the intermediate portion of the curriculum, and that twenty-one months of undivided study should be demanded as a minimum for the final examination. If this proposition be adopted, it will not be necessary to make any regulation regarding final study in the earlier portion of the course.

While recognizing that there is much to be said on both sides, the Committee, looking to the relative importance of the final work, recommend to the Council the adoption of the latter proposal.

IV.—CONCLUSION.

The Committee accordingly advise that the following be added to the "Recommendations of the Council in regard to Professional Education":

"For the purposes of this Recommendation the subjects of the curriculum are arranged in two groups, the earlier group comprising the Preliminary Sciences and Anatomy and Physiology, the later group embracing all the remaining subjects, exclusive of Pharmacy.

"The Regulations of the bodies should be so framed as to secure (1) for the study of the subjects of the later group the reservation of a period equivalent in value to two and a half academic years (twenty-seven months) of undivided study, half time-value being allowed for periods of work in which studies in the earlier and later groups overlap; and (2) the reservation of a period of two academic years (24 months), in which the studies of the later group shall have the undivided attention of the student."

JOHN YULE MACKAY,

May 26th, 1909.

Chairman.

Mr. THOMSON suggested that the report should be sent to the various licensing bodies concerned for their observations thereon.

Mr. MORRIS hoped that Dr. Mackay, who had given so much time and labour to the subject, would not object to the report being circulated among the various bodies concerned and their comments asked thereon.

Dr. MACKAY thought if the Council were not sure as to its opinion then would be the time to go to the bodies concerned and ask for their comments; but this was eminently a subject which the Council should decide for itself, as all the figures and facts had been before the various bodies. The same end would be attained if the report were put upon the minutes.

Mr. THOMSON proposed as an amendment, and Mr. MORRIS seconded:

That the report be circulated to the various licensing bodies for their observations.

The amendment, on being put, was lost, and the resolution was carried *nem. con.*, and it was resolved that the consideration of the report should be placed on the programme of business for the first day of next session.

DENTAL EDUCATION COMMITTEE.

The Dental Education and Examination Committee presented the following report:

A letter has been received from an educational body, the Incorporated Dental Hospital of Ireland, calling attention to a certain difference existing between the requirements of the several bodies granting licences in dental surgery. The recommendation of the General Medical Council, which is to be found in the regulations for the registration of medical and dental students, 1908, p. 18, is:

One year *bona fide* apprenticeship with a registered dental practitioner, after being registered as a dental student, may be counted as one of the four years of professional study.

It appears that the Royal College of Surgeons of England allows two years of such study to be counted towards the four years of the curriculum, but that the other licensing bodies only allow one year to be so counted. As from the printed regulations the actual practice of some of the bodies is not obvious, inquiries have been made by the Registrar and answer received. The regulation (2) of the Royal College of Surgeons is of having been engaged during a period of not less than two years in acquiring a practical familiarity with the details of mechanical dentistry under the instruction of a competent practitioner, or under the superintendence of the mechanical department of a recognized dental hospital, where the arrangements for teaching mechanical dentistry are satisfactory to the Board of Examiners in dental surgery.

Mr. MORRIS wished to give the Council an assurance, and to draw attention to a fact. The assurance was that he felt quite certain that his colleagues in the Royal College of Surgeons would desire to take into full consideration with proper respect any recommendation that came from the General Medical Council. The fact to which he would like to draw attention was that this was the jubilee year of the institution by the College of Surgeons of an examination for the licence in dental surgery. It would be admitted by those who knew the subject that the College of Surgeons took a great deal of trouble to purify the

profession before it entered into the arrangements for dental education, and it had consistently done so ever since the licence in dental surgery was instituted. It was admitted by those who were acquainted with the actual practical work of dental surgery that two years for the general subjects was sufficient, but the requirements of the Council were that there should be two years at least of instruction in mechanical dentistry and that there should be a four years' curriculum. This involved either that the whole of the two years must be passed in a dental hospital or else the curriculum was practically a five years' curriculum. The Dental Board and the Council of the College of Surgeons was convinced that the education in mechanical dentistry which students got under a proper director in those departments in a hospital was infinitely superior to that which they got as apprentices to dental practitioners. It was the aim and object of the Royal College of Surgeons by degrees to make the whole of the period of four years to include any training in mechanical dentistry to be passed under the direction of a hospital. That was the reason why in 1906 it changed its requirements of three years' practice in mechanical dentistry to two years, because it was hoped that those two years would be passed in a dental hospital. But the time had not yet arrived when that could be done, for the reason that there was not provided in all the places where dentistry was taught a sufficient amount of laboratory accommodation for the mechanical training of every student. There was accommodation to give demonstrations, but not to give every student a practical education. That was the reason why the Royal College of Surgeons of England had felt that the time had not yet come when it could put their recommendations into force. He moved:

That the report of the Dental Education and Examination Committee be communicated to the Royal College of Surgeons of England for such observations as it might think it desirable to offer.

Sir CHARLES BALL seconded, and the resolution was agreed to.

LEGISLATION AS TO ANAESTHETICS.

The PRESIDENT announced that the following Committee had been appointed—

The President,	Mr. Hodsdon,
Mr. Morris,	Sir Charles Ball,
Mr. Tomes,	Dr. Knox,

to consider the proposals for legislation on the subject of anaesthetics which have been or might hereafter be put forward, to make such representations on behalf of the Council to the authorities concerned as might be deemed necessary, and to report to the Council on the position of the subject at the November session.

Monday, May 31st, being Bank Holiday in England, the Council adjourned till 2 o'clock on Tuesday, June 1st.

REAPPOINTMENT OF REGISTRAR.

Dr. NORMAN MOORE moved, Mr. MORRIS seconded, and it was resolved that Mr. Allen be reappointed registrar for the ensuing year.

VOTE OF THANKS TO CHAIRMAN.

Moved by Dr. NORMAN MOORE and resolved,

That the best thanks of the Council be given to the President for his able services in the chair during the present session.

The proceedings then terminated.

DISCIPLINARY CASE.

Much of the time of the Council on Friday, Saturday, and Tuesday was occupied in hearing the evidence with regard to a charge against Dr. R. Galbraith Reid, formerly of Lambeth, of misconduct with a married woman, alleged to have been continued during several years. The complainant, the married woman in question, was examined and cross-examined, and certain witnesses were called in support of her story. Dr. Reid was also examined and cross-examined, and gave an absolute denial to the charges. Evidence as to Dr. Reid's high reputation and character was given by Dr. Hector Mackenzie, who had known him both professionally and privately for eight years; by the Rev. M. Sheppard, of St. John's, Lambeth, who had known him for thirteen years; by the Rev. A. O. Hayes, vicar of Holy Trinity, Lambeth, who had known him for over

ten years; by the Rev. C. T. Payne, vicar of St. Andrews, New Kent Road, Lambeth; by Dr. Sangster, of Lambeth, and by Dr. Frederick Barclay, who had succeeded Dr. Reid in practice; and the evidence of a number of other witnesses to character was tendered but not heard. The Council having considered the case *in camera*, the President announced to Dr. Reid in public session that the facts alleged against him had not been proved to the satisfaction of the Council, and that the case was therefore at an end.

MILK AND DAIRIES BILL.

The provisions of the Milk and Dairies Bill, which was introduced into the House of Commons on May 24th by the President of the Local Government Board, are to apply only to England and Wales and Ireland.

Definition of Dairy and Dairyman.

A dairy is defined as any "farm, farmhouse, cowshed, milk store, milk shop, or other place from which milk is supplied, or in which for purposes of sale or manufacture into butter or cheese milk is kept or used." The making of butter and cheese is expressly excluded from the provisions of the Dairies, Cowsheds, and Milkshops Order which now regulates the dairying trade.

A dairyman is defined as a "cowkeeper, purveyor of milk or occupier of a dairy," but the exception contained in the existing Order is retained in the bill in which the expression "dairyman" does not include a person who only sells milk of his own cows in small quantities to his workmen or neighbours for their accommodation.

Registration of Dairies.

The bill requires that the dairyman as well as the dairy premises shall be registered by the sanitary authority who may remove any dairy from the register or may refuse to register any premises if they become or are unsuitable for the business, or if the premises are a nuisance, or do not comply with the provisions of the bill or of Orders made under the bill. This power, which is given to sanitary authorities, is not so real as it appears to be, for the decision of the authority may be upset by an appeal to the local justices. After two convictions against the provisions of the bill the name of a dairyman may be removed from the register either absolutely or for a definite period. No provision is made for preventing the convicted dairyman being registered in another sanitary district.

Inspection and Prohibition of Sale.

Section 4 of the Infectious Diseases (Prevention) Act, 1890, is repealed, and there is substituted a clause with thirteen subclauses. These refer to the inspection of dairies by a medical officer of health for the purpose of preventing the spread of infectious disease through the medium of milk supplies. If a medical officer of health, as a result of his inspection, comes to the conclusion that a particular supply of milk should be stopped, he may do so either by agreement with the dairyman, or by compulsion, or he may refer the matter to the sanitary authority. If he takes the first course, he may agree with the dairyman to stop the supply and use of the milk from the dairy or from any particular cow on such terms and subject to such conditions as may be agreed upon. If the second course is adopted, he may make an interim order which would be in force for a maximum period of ten days, prohibiting the supply of milk for human consumption from the dairy or from a particular cow. If the matter is referred to the sanitary authority, they may act in a similar manner either by agreement or by compulsion.

An order may be made by the authority prohibiting the supply of milk for a longer period than ten days, and until prescribed conditions are complied with. Against this order there is an appeal to the Local Government Board or, under certain circumstances, to the Board of Agriculture and Fisheries. Upon an appeal being lodged an inquiry will be made by an officer of the particular board concerned, and if the Board considers that the order of the authority was made without due cause, the dairyman, if not himself in default, will be able to recover full compensation for any damage he may have sustained, any dispute as to the amount of compensation, etc., being settled as provided in Section 308 of the Public Health Act, 1875.

Tuberculous Milk.

The sale of tuberculous milk is sought to be prevented by providing a penalty of £10 on the conviction of any person who "knowingly sells, or offers or exposes for sale, or suffers to be sold or offered or exposed for sale, for human consumption or for use in the manufacture of products for human consumption; or knowingly uses or suffers to be used in the manufacture of products for human consumption tuberculous milk or the milk of any cow which is suffering from tuberculosis of the udder, or which is emaciated from tuberculosis." A penalty of £5 may also be enforced upon a dairyman who does not isolate from his herd any cow which he knows to be tuberculous.

Taking Samples.

An inspector of the Local Government Board, or any person authorized by him, is empowered to take samples of milk in any part of the country to which the bill applies, and a medical officer of health, or any one he authorizes, may take samples within the area for which he acts.

Orders.

Clause 6 empowers the Local Government Board, after consultation with the Board of Agriculture and Fisheries, to make general and special orders. These may relate to a variety of matters, the most important of which is the last, for it enables the Local Government Board to decide what authorities shall carry out the orders. The regulation of the use of preservatives, the manner of conveyance of milk, the labelling of milk receptacles, the mixing of milk, the measures to be taken for cooling it, and the qualifications, duties, salaries, and tenure of office of veterinary inspectors are all matters which the Local Government Board may deal with by Order.

If any dispute arises as to whether the occupier or the owner of premises affected by the bill should bear any expenses involved in compliance with any Order of the Board, the decision is to be left to the local justices.

Warranties.

A warranty will no longer be available as a defence to any proceedings under the Sale of Food and Drugs Acts where the article in respect of which proceedings are taken is milk.

Imported Milk.

Danger to public health from imported milk is provided against by Clause 8 of the bill which requires the Local Government Board to make regulations as to imported milk under the Public Health (Regulations as to Food) Act, 1907.

Infant Milk Dépôts.

The establishment and maintenance of dépôts for the sale of milk specially prepared for consumption by infants under 2 years of age is permitted by Clause 9 to an urban district with a population of 50,000 or upwards and to an urban district with a population between 10,000 and 50,000 with the consent of the Local Government Board. In either case regulations which the Board are empowered to make must be observed. These regulations refer to the sources and the nature of the milk, its price and the manner in which it shall be sold, the statistical and other records which shall be kept, the visitation of the homes of those supplied, the keeping of accounts, and the co-operation of adjoining sanitary authorities.

Defaulting Authorities.

In the event of a sanitary authority failing to carry out the provisions of the bill, the powers and duties of the authority may be undertaken by the county council, all expenses incurred being recovered from the authority. Failing the carrying out of their duties, either by the sanitary authority or by the county council, the Local Government Board may make an Order directing the authority or the council to take such action as may be specified in the Order, or may empower some person to perform the duties of the council.

London.

The administration of the bill in London will be in the hands of the London County Council.

CENTRAL MIDWIVES BOARD.

A MEETING of the Central Midwives Board was held at Caxton House, Westminster, on May 27th, with Dr. F. H. CHAMPEYNS in the chair.

False Certificates.

The CHAIRMAN, referring to proceedings undertaken by the Director of Public Prosecutions in regard to false certificates under Section 11 of the Midwives Act, said that medical men, amongst others, sometimes signed certificates and similar documents without as full an inquiry into the circumstances of the case as was desirable; the board was anxious to have the abuse stopped, and he hoped that the proceedings would have a salutary effect and that certificates would be more carefully looked into before they were signed.

Uncertified Women as Midwives.

A letter was read from the clerk of the West Sussex County Council, suggesting that the local supervising authority should be temporarily enabled to permit uncertified women approved by them to practise as midwives after March 31st, 1910, in certain cases. The board decided to reply that there was no power under the Midwives Act to carry out the suggestion, and that the board did not approve of it.

Covering of Midwives by Medical Practitioners.

The report of the Standing Committee of the board stated that Dr. A. G. R. Foulerton, Medical Officer of Health for East Sussex, had attended and discussed with the committee the covering of midwives by medical practitioners, and the best means of its prevention.

The board decided that the attention of the Midwives Act Committee be called to the subject.

Natal and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

THE following qualified candidates for the Naval Medical Service have been appointed Surgeons in His Majesty's Fleet, dated May 14th: KENNETH H. HOLE, M.B., GILBERT F. STYLS, ARTHUR A. SANDERS, M.B., MICHAEL P. FITZGERALD, M.B., JOHN HADWEN, M.B., HARRY W. NICHOLLS, RAYMOND F. M. ROBERTS, ALFRED G. MALCOLM, M.B., HORACE C. DEVAS, HENRY BYRNS, M.B., HUGH F. BRIGGS, M.B., GORDON A. JACKSON, M.B., B.A., WILLIAM MILLER, M.B., JAMES S. OLWIN, M.B., JAMES BARRETT, M.B. They are appointed to the Victory, additional, for course of instruction at Haslar Hospital.

Staff Surgeon R. R. FASSON, M.B., has been allowed to withdraw from the service with a gratuity, May 27th. He was appointed Surgeon, February 26th, 1902, and Staff Surgeon, February 26th, 1908.

The following appointments have been made at the Admiralty: Fleet Surgeon J. L. SMITH, M.V.O., M.B., to the *Excellent*, on recommissioning, June 1st; Fleet Surgeon J. E. COAD, M.B., to the *Nelson*, June 1st; Fleet Surgeon G. A. WATERS, M.D., to the *Drake*, June 1st; Fleet Surgeon W. E. MARSHALL, to the *Excellent*, additional, for the *Revenge*, June 1st; Fleet Surgeon T. AUSTEN to the *Achilles*, June 1st; Surgeon R. L. JONES to the *Exmouth*, on recommissioning, June 1st; Fleet Surgeon A. G. ANDREWS and Surgeon H. R. BICKFORD to the *Superb*, on recommissioning, undated; Fleet Surgeon A. M. PAGE to the *Swiftsure*, May 26th; Fleet Surgeon J. A. KEOGH, M.B., and Surgeon A. R. FISHER to the *Jupiter*, on recommissioning, June 1st; Staff Surgeon R. A. ROSS, M.B., to the *Thetis*, on recommissioning, undated; Staff Surgeon J. W. W. STANTON to Plymouth Hospital, June 10th; Surgeon P. D. M. CAMPBELL to the *Excellent*, additional for the *Grafton*, undated; Surgeon F. G. HITCH, to the *Shannon*, June 1st.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

THE following officers, who are serving in India, are appointed specialists in the subjects named:—Advanced Operative Surgery: Major F. E. GUNTER, M.B., 8th (Lucknow) Division. Ophthalmology: Captain J. G. GILL, 1st (Peshawar) Division. Captain H. M. NICHOLLS, M.B., 6th (Poona) Division. Electrical Service: Captain T. B. MORLIARTY, 8th (Lucknow) Division.

INDIAN MEDICAL SERVICE.

LEUTENANT-COLONEL R. N. CAMPBELL, M.B., Bengal, is promoted to be Colonel, from April 2nd. He entered the department as Surgeon, October 1st, 1877, and became Surgeon-Lieutenant-Colonel, October 1st, 1897. He served with the Naga Hills expedition in 1879-80, for which he was mentioned in despatches and granted a medal with clasp, and with the Akha expedition in 1883-4, being again mentioned in despatches. Colonel D. WILKIE, M.B., is permitted to retire from the service from April 2nd. He was appointed Assistant Surgeon, April 1st, 1875, and became Colonel, April 2nd, 1904.

EXAMINATION FOR COMMISSIONS.

An examination for not fewer than twenty-one commissions in His Majesty's Indian Medical Service will be held in London on Monday, July 26th, and the five following days. Particulars as to pay, promotion, etc. in the service and the necessary forms for application, can be obtained from the Military Secretary, India Office, London, S.W.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

London Mounted Brigade Field Ambulance.—HUGH S. BRADLEY to be Lieutenant, March 5th.

First South Midland Mounted Brigade Field Ambulance.—JOHN M. DALRYMPLE, M.B., to be Lieutenant, April 6th.
Second London Sanitary Company.—Lieutenant V. F. CORSTELL to be Captain, March 30th; PETER C. SMITH to be Captain, March 30th.
For attachment to Units other than Medical Units.—Surgeon-Captain E. GRAY, from the 2nd Cheshire (Railway) Royal Engineers (Volunteers), to be Captain, with precedence as in the Volunteer Force, April 1st, 1908; WILLIAM J. HOTTEN to be Lieutenant, April 21st.
Unattached List.—Major (Honorary Lieutenant in the Army) A. C. GEDDEN, M.D., from the Second Scottish General Hospital, Royal Army Medical Corps, to be Major, for service with the Edinburgh University Contingent, Senior Division, Officers' Training Corps.

VOLUNTEER INFANTRY.

SURGEON-LIEUTENANT W. H. BROAD, M.D., 2nd Volunteer Battalion the King's (Liverpool Regiment), resigns his commission, March 31st, 1908.

ROYAL ARMY MEDICAL CORPS (VOLUNTEERS).

LIEUTENANT A. C. PARSONS, London Companies, resigns his commission, March 31st, 1908.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 8,048 births and 4,375 deaths were registered during the week ending Saturday last, May 22d. The annual rate of mortality in these towns, which had been 14.1, 13.7, and 14.7 per 1,000 in the three preceding weeks, declined against last week to 13.9 per 1,000. Among these several towns the death-rates ranged from 6.0 in Leyton, 6.5 in Walthamstow, 6.7 in Southwick, 7.6 in Hornsey and in Hastings, 7.7 in East Ham, 8.4 in Brighton, and 8.5 in Willesden and in Tottenham, to 19.5 in Ipswich, 19.6 in Salford, 19.8 in Manchester, 20.2 in Coventry, 20.4 in Wolverhampton, 20.7 in Rhondda, 21.1 in Oldham, 21.8 in Middlesbrough, and 23.1 in Warrington. In London the rate of mortality was 13.4 per 1,000, while it averaged 14.1 in the seventy-five other large towns. The death-rate from the principal infectious diseases averaged 1.3 per 1,000; in London this death-rate was equal to 1.5 per 1,000, while among the seventy-five other large towns these diseases caused death-rates ranging upwards to 2.3 in Wigan and in Manchester, 2.6 in West Ham, 3.4 in Norwich, 4.1 in Salford, and 9.5 in Wolverhampton. Measles caused a death-rate of 1.3 in West Hartlepool and in South Shields, 1.5 in West Bromwich, in Bootle, and in Manchester, 2.2 in Salford, 3.4 in Norwich, and 6.5 in Wolverhampton; diphtheria of 1.3 in King's Norton, whooping-cough of 1.2 in Wigan, 1.5 in Middlesbrough, and 2.1 in Swansea; and diarrhoea of 1.2 in Aston Manor. The mortality from scarlet fever and from enteric fever showed no marked excess in any of the large towns, and no fatal case of smallpox was registered during the week. The Metropolitan Asylums Hospitals and the London Fever Hospital contained 2,254 scarlet fever patients at the end of last week, against 2,175, 2,173, and 2,181 at the end of the three preceding weeks; 335 new cases were admitted during the week, against 309, 315, and 348 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

DURING the week ending Saturday last, May 22d, 595 births and 596 deaths were registered in eight of the principal Scottish towns. The annual rate of mortality in these towns, which had been 16.9, 16.2, and 14.9 per 1,000 in the three preceding weeks, rose again last week to 16.7 per 1,000, and was 2.8 per 1,000 above the rate during the same period in the seventy-six large English towns. Among these Scottish towns the death-rates ranged from 10.8 in Greenock and 11.6 in Leith, to 18.2 in Paisley and 19.4 in Dundee. The death-rate from the principal infectious diseases averaged 1.9 per 1,000 in these eight towns, the highest rates being recorded in Dundee and Paisley. The 287 deaths registered in Glasgow included 4 from scarlet fever, 2 from diphtheria, 23 from whooping-cough, and 5 from diarrhoea. Seven fatal cases of whooping-cough and 2 of diarrhoea were recorded in Edinburgh; 3 of whooping-cough and 5 of diarrhoea in Dundee; 2 of diarrhoea in Aberdeen; 5 of measles and 2 of diphtheria in Paisley; and 5 of whooping-cough in Greenock.

Hospitals and Asylums.

HEREFORD COUNTY AND CITY LUNATIC ASYLUM.

THE annual report of Dr. C. S. Morrison, the medical superintendent of this asylum, for the year 1907 shows that there were 522 patients in the asylum on January 1st, 1907, and 531 at the end of the year. The total cases under care during the year numbered 666, and the average number daily resident 528. The numbers chargeable to Hereford city and county remaining at the end of the year (477) show an increase of only 2 on those of the year 1903, the numbers having fluctuated within only narrow limits in the interval. The male patients, however, appear to have increased more than the female of late years, and Dr. Morrison reports that the accommodation on the male side has become a more acute question each year. During the year 84 were admitted, of whom 70 were first admissions. Of the total 84 admissions, 76 were direct and 6 indirect admissions, and 2 statutory readmissions. As regards duration of disorder on admission, and excluding any reference to voluntary boarders, in only 14 the attacks were first attacks within three months, and in 17 more of less than two years' duration on admission; in 21 not first attacks of less than two years' duration; in 2 it was unknown whether first attack or not, and in the remainder the attacks were either of more than two years' duration (13) on admission or of congenital origin (12). The admissions were classified according to the forms of mental disorder into:

Mania of all kinds, 27; melancholia of all kinds, 12; senile and secondary dementia, 10; delusional insanity, 10; general paralysis, 2; confusional insanity, 3; insanity with epilepsy, acute delirium and alternating insanity, each 1; and cases of congenital or infantile defect, 15. As to the probable etiological factors in the direct admissions, alcohol was assigned in 13, or 16.6 per cent. In his report Dr. Morrison mentions that as a secondary cause alcohol was operative in 35.3 per cent. of the adult males, but that in 22.8 per cent. the excess had followed a prior mental affection. Acquired syphilis was assigned in 4, and congenital syphilis in 2 more; tuberculosis in 3, and various other toxic agents in 20. Critical periods were assigned in 13; the puerperal state in 1; bodily trauma in 9; deprivation of special senses 3; physiological defects and errors in 18. Diseases of the nervous system in 6, other bodily affections in 45, and mental stress in 18. An insane heredity was ascertained in 20, of alcoholism in 1, of epilepsy in 1, of various neuroses in 2, and of marked eccentricity in 2, giving a total neuropathic heredity in 27, or 34.6 per cent. of the direct admissions. During the year 29 were discharged as recovered, giving a recovery-rate on the direct admissions of 34.5 per cent., or of the recoveries in the direct admissions on the direct admissions of 32.1 per cent. There were also 8 discharged as relieved, and 1 as not improved. During the year 37 died, giving a death-rate on the average numbers resident of 7.0 per cent. The deaths were due in 7 to cerebro-spinal diseases; in 7 to diseases of heart and blood vessels; in 11 to diseases of the respiratory organs, including 4 deaths from pulmonary tuberculosis; in 6 to abdominal diseases, including 1 from tuberculous peritonitis; in 1 to suffocation, and in the remainder to general diseases. Deaths from tuberculosis accounted, therefore, for 13.5 per cent. of the total deaths. No serious outbreak of zymotic disease occurred, but dysentery and diarrhoea were prevalent, the general health being otherwise good throughout the year.

ANNUAL MEETING, BRITISH MEDICAL ASSOCIATION, BELFAST, 1909.

THE Seventy-seventh Annual Meeting of the British Medical Association will be held at Belfast from July 23rd, to July 31st, 1909, under the Presidency of Sir William Whitla.

The Annual Representative Meeting commences in Belfast on July 23rd. The Presidential Address will be delivered on July 27th. The Sections will meet on July 28th, 29th, and 30th.

A preliminary programme of arrangements was published in the SUPPLEMENT of May 29th, p. 317. The Honorary Local Secretaries are: Henry Lawrence McKisack, M.D., M.R.C.P., 17, University Square, Belfast; Cecil Edward Shaw, M.A., M.D., M.Ch., 29, University Square, Belfast; and Howard Stevenson, B.A., M.B., F.R.C.S.I., 2, College Square North, Belfast.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

THE British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the BRITISH MEDICAL JOURNAL is supplied weekly, post free, to every member of the British Medical Association, wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every

Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three Members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the BRITISH MEDICAL JOURNAL for non-members is £1 8s. 0d. for the United Kingdom, and £1 15s. 0d. for abroad.

ASSOCIATION NOTICES.—Annual General Meeting.—Annual Representative Meeting.—Council Meeting	385		

Queen's College, Belfast, where the Association meetings will be held.

President-elect:
Sir WILLIAM WHITLA, M.D., LL.D., Professor of Materia Medica and Therapeutics, Queen's College, Belfast.
Past-President:
HENRY DAVY, Hon.D.Sc., M.D., F.R.C.P.Lond., Physician, Royal Devon and Exeter Hospital, Exeter.
Chairman of Representative Meetings:
JAMES ALEXANDER MACDONALD, M.D., M.Ch., R.U.I., Physician, Taunton and Somerset Hospital.
Chairman of Council:
EDMUND OWEN, Hon.D.Sc., LL.D., F.R.C.S., Consulting Surgeon to St. Mary's Hospital, London.
Treasurer:
EDWIN RAYNER, M.D.Lond., F.R.C.S., Consulting Surgeon Stockport Infirmary, Stockport.

The Seventy-seventh Annual Meeting of the British Medical Association will be held in Belfast in July, 1909. The President's address will be delivered on Tuesday, July 27th, and the Sections will meet on the three following days. The Annual Representative Meeting will begin on Friday, July 23rd, 1909.

PROGRAMME OF BUSINESS.

The Address in Medicine will be delivered by R. W. PHILIP, M.D., F.R.C.P. Edin., Physician, Royal Infirmary, and Royal Victoria Hospital for Consumption, Edinburgh.

The Address in Surgery will be delivered by ARTHUR EDWARD JAMES BARKER, F.R.C.S., Professor of the Principles and Practice of Surgery, University College, London.

The Address in Obstetrics will be delivered by Sir JOHN W. BYERS, M.D., Professor of Midwifery and Diseases of Women, Queen's College, Belfast.

The Popular Lecture will be delivered by Dr. J. A. MACDONALD, Physician to the Taunton and Somerset Hospital, Chairman of the Representative Meetings.

THE SECTIONS.

The scientific business of the meeting will be conducted in fifteen Sections, which will meet on Wednesday, July 28th, Thursday, July 29th, and Friday, July 30th.

The President, Vice-Presidents, and Honorary Secretaries of each Section constitute a Committee of Reference for that Section, and exercise the power of inviting, accepting, or declining any paper, and of arranging the order in which accepted papers shall be read. Communications with respect to papers should be addressed to one of the Honorary Secretaries.

A paper read in the Section must not exceed fifteen minutes, and no subsequent speech must exceed ten minutes.

Papers read are the property of the British Medical Association, and cannot be published elsewhere than in the BRITISH MEDICAL JOURNAL without special permission.

The following are the general arrangements so far as they are yet complete:

ANATOMY AND PHYSIOLOGY.

President: CHARLES SCOTT SHERRINGTON, M.D., F.R.S., Physiological Laboratory, University, Liverpool.

Vice-Presidents: Professor THOMAS HUGH MILROY, M.D., F.R.S.E., Queen's College, Belfast; Professor PETER THOMPSON, M.D., King's College, Strand, London; ARTHUR PHILIP BEDDARD, M.D., F.R.C.P., 44, Seymour Street, Portman Square, London, W.; Professor ANDREW FRANCIS DIXON, M.B., D.Sc., 73, Grosvenor Road, Dublin.

Honorary Secretaries: ALEX. LOW, M.B., 142, Blenheim Place, Aberdeen; JOHN ALEX. MILROY, M.D., Queen's College, Belfast.

The following provisional programme has been arranged:

A discussion on the Deep Afferents, their Function and Distribution. To be opened by Professor C. S. Sherrington.

Papers: The following papers have been accepted:

DIXON, Professor A. F., Dublin. The Anatomy of the Achondroplastic Skeleton.

JOHNSTON, H. M., B.A., M.B., B.Ch., Dublin. Notes on the Distribution of the Intercoastal Nerves.

MACLEAN, Hugh, M.D., Liverpool. Phosphatides in the Light of Modern Research.

MILROY, John Alex., M.D., Belfast. (1) Some Observations on the Staining of the Central Nervous System in Bulk with Aniline Dyes (with demonstration); (2) Some Metallic Derivatives of Haematomorphyrin.

MOORE, Professor B., Liverpool. The Bio-Chemistry of Haemolysis.

PATTEN, Professor C. J., Sheffield. An Early Human Embryo.

ROAF, Herbert E., M.D., Liverpool. A Simple Method of Demonstrating Cholesterol in Bile.

Professor Peter Thompson (London) will give a demonstration of models illustrating three stages in the form of the human heart during the first month of development.

DERMATOLOGY AND ELECTRO-THERAPEUTICS.

President: WILLIAM CALWELL, M.D., 6, College Gardens, Belfast.

Vice-Presidents: ROBERT BRIGGS WILD, M.D., 96, Mosley Street, Manchester; LESLIE ROBERTS, M.D., 46, Rodney Street, Liverpool.

Honorary Secretaries: JAMES HARRY SEQUEIRA, M.D., F.R.C.P., 8a, Manchester Square, London; S. ERNEST DORE, M.D., 26, New Cavendish Street, London; JOHN CAMPBELL RANKIN, M.D., 38, University Road, Belfast.

A discussion will be held on the Treatment of Skin Diseases by Radium and Radio-therapy.

DISEASES OF CHILDREN.

President: HAROLD J. STILES, F.R.C.S. Edin., 9, Great Stuart Street, Edinburgh.

Vice-Presidents: JOHN McCRAW, M.D., 74, Dublin Road, Belfast; RICHARD WHYTOCK LESLIE, M.D., "St. Heliers," Strandtown, Belfast; ROBERT CAMPBELL, F.R.C.S., 21, Great Victoria Street, Belfast.

Honorary Secretaries: ANDREW FULLERTON, F.R.C.S.I., 8, University Square, Belfast; JOHN WILLIAM SIMPSON, M.D., 19, Lansdowne Crescent, Edinburgh.

It is proposed to devote some portion of three of the days on which the Section meets to the discussion of the following subjects:

Wednesday, July 28th.—Club Foot.

Thursday, July 29th.—Functional Neuroses in Children.

HAEMATOLOGY AND VACCINE THERAPY.

President: SIR ALMROTH WRIGHT, M.D., F.R.S., 6, Park Crescent, Regent's Park, London, N.W.

Vice-Presidents: ALEX. GARDNER ROBB, M.B., 15, University Square, Belfast; THOMAS HOUSTON, M.D., 95, Great Victoria Street, Belfast; Captain STEWART RANKIN DOUGLAS, I.M.S., Inoculation Department, St. Mary's Hospital, London.

Honorary Secretaries: WILLIAM DUNLOP DONNAN, M.D., 12, High Street, Holywood, co. Down; DUDLEY W. CARMALT-JONES, M.B., B.Ch. Oxon., 78, Wimpole Street, London, W.

The following programme has been arranged:

Wednesday, July 28th.—1. Opening Address by the President, of which the following is a synopsis:

Brief survey of the therapeutics of bacterial diseases, and of the development of therapeutic immunization out of prophylactic immunization. Anticipation that the method of passive immunization (serum-therapy) would furnish a general method for the treatment of generalized bacterial infections. Question as to how far this anticipation has been realized. Proposal that localized bacterial infections might appropriately be treated by active immunization (vaccine-therapy). Subsequent suggestion that vaccine-therapy might be applied also to generalized infections. Brief synopsis of the results which have been achieved by this therapeutic method. Question as to what future extensions may be anticipated for the method depends upon whether the fundamental assumption of the method—that is, the assumption that the machinery of immunization can be called into action in every bacterial infection by a suitable dose of the appropriate vaccine—is well founded. Consideration of this question. Urgent need for further study of the physiology of the machinery of immunization. Possible applications of vaccine-therapy in connexion with the secondary infections of scarlatina,

small-pox, cancer, whooping-cough, and hay fever, and in connexion with the limitation of family and institutional epidemics.

2. Papers on separate subjects: Dr. Houston, Typhoid Carriers. Captain Douglas, Bacteriology of Cystitis. Dr. Fleming, Bacteriology and Vaccine Treatment of Acne.

Thursday, July 29th.—Discussion: The Early Diagnosis of Tuberculosis. To be opened by Professor CALMETTE, l'Institut Pasteur de Lille, with a paper of which the following is a synopsis:

(1) Experimental researches have shown that tuberculous infection is at first confined to glands, that its spread depends on the number and virulence of the bacilli, that if few they are destroyed or calcified in the glands, and that serious lesions are due to single massive or repeated small infections; early diagnosis is essential for cure. (2) Consideration of the relative value of cutaneous, conjunctival, and intradermo reactions in diagnosis; and, further, of those of "reactions of recrudescence," and humoral and phagocytic reactions. (3) Suggested routine employment of the above for the isolation of infected subjects.

Friday, July 30th.—Discussion: Bacterial Infections of the Respiratory Tract other than Tuberculous. To be opened by Dr. BORDET, who will deal with the micro-organism of whooping-cough. A coccobacillus was isolated in 1906 with definite cultural and staining peculiarities. Filtered cultures are non-toxic, but endotoxins are highly virulent and produce the essential symptoms of whooping-cough. Specific properties are present in the serum of convalescents, which may be demonstrated by the method of the fixation of complement.

HYGIENE AND PUBLIC HEALTH.

President: LOUIS COLTMAN PARKES, M.D., 61, Cadogan Square, Chelsea, London.

Vice-Presidents: SAMUEL AGNEW, M.D., Lurgan, co. Armagh; HENRY O'NEILL, M.D., 6, College Square East, Belfast; CHARLES KILLICK MILLARD, M.D., Town Hall, Leicester.

Honorary Secretaries: CHARLES PORTER, M.D., Public Health Department, Town Hall, Finsbury; WILLIAM MCLEOD, L.R.C.P., 103, Antrim Road, Belfast; THOMAS CARNWATH, M.B., Town Hall, Manchester.

The following subjects have been suggested for discussion:

1. The Compulsory Notification of all forms of Tuberculosis and the Mortality from Tuberculous Diseases in relation to Sex. To be opened by Dr. Harold Scurfield, Medical Officer of Health, Sheffield.

2. Latent Infections of the Diphtheria Bacillus, and the Administrative Measures required for dealing with Contacts. (Joint discussion with the Laryngological Section.)

3. The Discharge of Sewage Effluents into Tidal Waters

The following additional subjects are also suggested:

1. Enteric Fever Carriers and Paratyphoid Bacilli.
2. Ventilation of Sewers and House Drains and the Disconnexion Trap.
3. The Medical Officer of Health and School Medical Inspection.

LARYNGOLOGY, OTOTOLOGY, AND RHINOLOGY.

President: ST. CLAIR THOMSON, M.D., F.R.C.P., 28, Queen Anne Street, London.

Vice-Presidents: ERNEST BLECHYNEDD WAGGETT, M.B., 45, Upper Brook Street, London, W.; V. P. HENRY SMURTHWAITE, M.D., 8, St. Mary's Place, Newcastle-on-Tyne; J. A. KNOWLES RENSHAW, M.D., 11, St. John Street, Manchester.

Honorary Secretaries: HAROLD SHUTTLEWORTH BARWELL, F.R.C.S., 55, Wimpole Street, London; JOHN STODDART BARR, M.B., 13, Woodside Place, Glasgow; HENRY HANNA, M.B., B.Sc., 57, University Road, Belfast.

The following subjects have been selected for special discussion:

Wednesday, July 28th.—The Treatment of Tinnitus Aurium. (1) Dr. Thomas Barr (Glasgow); (2) Mr. Richard Lake (London).

The following is a synopsis of the remarks to be made by Dr. THOMAS BARR (Glasgow) in opening the discussion:

The paper, by arrangement with Mr. Richard Lake, deals solely with non-operative treatment. It is pointed out that the tinnitus aurium is merely a symptom, and effective treatment must depend on a correct knowledge of the condition underlying it. Hence, thorough examination of the organ of hearing by all the subjective and objective methods is a primary essential. After brief reference to cases depending on accumulation of wax, Eustachian obstruction, removable fluids in the tympanum, and other conditions in which tinnitus can be readily cured or alleviated by well-known methods, the author deals with cases where tinnitus persists after such methods of treatment or where no definite lesion can be shown, by objective examination, to exist in the ear. In this connexion emphasis is placed on the importance of attention to the state of the general health, and the influence of coexisting systemic disease is shown, as also that of mental attitude, personal habits, climate, and special drugs, and external applications. The special treatment indicated for the pulsating forms of tinnitus is considered. The value of *Tonbehandlung* is next discussed, this being the influence exerted upon certain subjective sounds in the ear, mainly of a musical character, by objective sounds from a tuning-fork. With reference to electrical treatment, it is pointed out that the apparently good effects from the high frequency currents reported a few years ago do not seem to have been borne out by further experience. In discussing the effects upon tinnitus of naso-pharyngeal treatment it is shown that the establishment of good nasal breathing and a healthy condition of the naso-pharyngeal mucous membrane often leads to the disappearance or mitigation of the symptoms, but that, on the other hand, it may be aggravated by ill-directed treatment of the naso-pharyngeal order.

Mr. LAKE will deal with the operative treatment: first, what may be termed remote operative, in the form of intranasal treatment, lumbar puncture, and ligation of the carotid artery; afterwards tracing the gradual evolution of the course of operative interference from simple removal of one or more of the vesicles or adhesions, etc., the simple opening or perforation of the labyrinth, its complete ablation, to the division of the auditory nerve itself; he will also endeavour to point out the lines which may be useful in attempting to decide when to operate and what operation to select.

Thursday, July 29th.—Latent Infections of the Diphtheria Bacillus, including the Administrative Measures required for dealing with Contacts. (In association with the Section of Hygiene and Public Health.) (1) Dr. Robert M. Buchanan (Glasgow); (2) Dr. Duncan Forbes (Brighton); (3) Dr. P. Watson Williams (Bristol).

Dr. WATSON WILLIAMS will open the discussion from the clinical standpoint:

If diphtheria may be defined as any pathological condition, local or general, due to infection by specific diphtheria organisms, diphtheria is "latent" when such pathological conditions are unaccompanied by obvious illness. The impingement of diphtheria bacilli on the nasal or oral mucous membrane without any local reaction, though not a true infection, is clinically a form of latent diphtheria. Latent diphtheria infections may be grouped under three heads:

- (1) Patients who afford none of the usual clinical indications of diphtheria are not definitely ill, and yet are found to be anaemic, have increased pulse tendency, are poorly in association with nasal catarrh, membranous rhinitis, faucial redness, and slight subacute tonsillitis, otorrhoea, sores, etc., which on bacteriological examination prove to be diphtheritic.
- (2) Cases with any of these diphtheritic lesions, but with no general symptoms of ill-health.
- (3) Persons who present no local lesions, and no departure from normal health, but in whom diphtheria bacilli have been found by culture tests. In practice latent diphtheria is met with affecting the nasal cavities, the fauces and mouth, the external auditory meatus, the skin, genital organs. There is no characteristic symptom or sign of a latent diphtheria, for in their clinical aspects they are indistinguishable from similar non-diphtheritic lesions of the same territories. Pseudo-membranous lesions of the mucous membrane of the upper air tract may be non-diphtheritic or diphtheritic. The only crucial test by

which latent diphtheritic infection can be determined is the bacteriological test. Examples of latent diphtheria will be cited, and various methods of treatment discussed.

Friday, July 30th.—The Treatment of Cicatricial Stenoses of the Larynx and Trachea. (1) Dr H. Lambert Lack (London); (2) Dr. Delsaux (Brussels); (3) Dr. Bryson Delavan (New York).

Dr. H. LAMBERT LACK will deal chiefly with cicatricial stenosis of the larynx in children as the result of tracheotomy for diphtheria. In nearly every case the tracheotomy tube was introduced through the larynx at the original operation, and this is considered to be the cause of the subsequent stenosis. In some cases the stricture was fibrous and limited to the soft parts, in others the laryngeal cartilages were extensively destroyed and the stricture almost impermeable. The first indication of treatment is to remove the tube from the larynx by performing a low tracheotomy and inserting the tube in as low a part of the trachea as can be reached. In cases seen early this alone will suffice to effect a cure. Where extensive stenosis is present and the above treatment fails, the larynx should be opened, the cicatricial tissue excised, and the case carefully watched. The various means of dilating the larynx by passing a solid plug upwards from the tracheotomy wound and by inserting a T-shaped cannula are described and condemned. The author's experience of intubation is also unfavourable. Two illustrative cases are described and some statistics given.

It is proposed this year to arrange a special exhibition of skiagraphy in relation to diseases of the upper air and food passages. Members are requested to send in the titles and descriptions of any skiagraphs they propose to contribute to Dr. Hanna at once. Every care will be taken of negatives and prints, which should be carefully labelled with the owner's name and address.

MEDICINE.

President: Professor JAMES ALEXANDER LINDSAY, M.D., F.R.C.P., 3, Queen's Elms, Belfast.

Vice-Presidents: ARTHUR FOXWELL, M.D. F.R.C.P., 47, Newhall Street, Birmingham; JOSEPH FRANCIS O'CARROLL, M.D., F.R.C.P.I., 43, Merrion Square, Dublin; LAURISTON ELGIE SHAW, M.D., F.R.C.P., 64, Harley Street, London; WILLIAM BAIRD MCQUITT, M.D., 8, College Square East, Belfast.

Honorary Secretaries: JOHN SMYTH MORROW, M.D., Eia House, Antrim Road, Belfast; LEWIS ALBERT SMITH, M.D., 25, Queen Anne Street, London, W.; JOHN ELDER MACILWAINE, M.D., 55, University Road, Belfast.

The following subjects have been chosen for discussion and demonstration:

1. Wednesday, July 28th.—Angina Pectoris. To be opened by Sir T. Clifford Allbutt, K.C.B.

Sir CLIFFORD ALLBUTT, K.C.B., proposes at the outset of the discussion on angina pectoris to ascertain precisely what is to be discussed, and in what terms. He will urge concerning this malady that precision both of terms and of substance is especially needed, for no disease has been more obscured by factitious notions or more confused by false analogies and erratic conjectures. Yet in all medicine there is no disease which presents a clearer image to the observant eye, nor one more conspicuously detached from the clinical jungle. If its characters are confused we have confused them by equivocations; if its type is blurred it has been distorted by counterfeits. If angina pectoris be looked at simply, without prepossession and with discrimination, its features will come into focus and the type will take fairer definition. On the threshold the speaker finds himself confronted by sophists who say bluntly that angina pectoris is not a disease, but a symptom or "symptom group"; it is here, indeed, that the sophistry begins, for this argument is but a play of words. "A symptom" angina pectoris certainly is not, for it is manifold; a symptom group it is, no doubt, or rather a symptom process, or procession. Now a symptom-group, or procession of symptoms negative and positive, which recurs in mankind with fair uniformity, must be due to causes correspondingly uniform. That genuine angina pectoris may

occur with the heart, lungs, and kidneys intact, is at last reluctantly admitted by physicians who have studied the data; and if so the essential, as apart from contingent causes, must lie outside these organs. The opener will divide angina pectoris into angina minor and angina major, and the symptoms of the two degrees will be compared. "Pseudo-angina" he intends to dismiss as pseudol diagnosis, and to relegate these cases to the Vaso-vagat class of Gowers. Vasomotor oscillations commonly occur in angina pectoris it is true, and in two main but incidental relations: first as determinants, when by changes of blood pressure attacks are provoked or mitigated; secondly, as consequences of acute impressions reaching the nerve centres by afferent paths. The speaker will proceed to appreciate the current hypotheses of angina pectoris, pointing out the diversity of these irreconcilable and often mutually destructive explanations. He will then advocate again his own interpretation, first published in 1894, and frequently and formally repeated since without effect upon medical opinion, although at length it has been fully accepted by Josué, in a paper published last November. This interpretation is that the origin of angina pectoris lies not in the heart but in the supra-sigmoid portion of the aorta; that the oppression of angina minor is seated in this place; and that in angina major the referred pains still originate here, but, as in the degrees of their severity they force successive centres, they radiate over more and more extensive areas. That, as concerns fatality, angina pectoris, neither in its minor nor in its major forms, is directly fatal; that indeed in many, perhaps in the majority, of major and minor cases taken together, death, if it occurs, is due to co-operating causes; that in a large number of cases, whatever the issue of co-operating lesions, such as valvular or myocardial disease, the anginous lesion is healed, or, at any rate, the symptoms cease; and, furthermore, that not a few cases of angina pectoris, even of the major variety, end in complete recovery; that when death is directly attributable to the angina it is due to vagus inhibition, such as is prone to happen, for example, in surgical operations about the root of the lungs or the brachial plexus, or to be induced by some other intense peripheral irritation, as in the genitalia. Finally, that, although a sound heart may be inhibited to the point of death, this very rarely happens; and that in nearly all cases in which the heart fails to disengage itself from the inhibitory interference, the myocardium, whether by coronary disease, by toxic influence, or otherwise, was previously unsound.

2. Thursday, July 29th.—The Medical Aspects of Athleticism. To be opened by Dr. Tyrrell Brooks (Oxford), Dr. Clement Dukes (Rugby).

Dr. TYRRELL BROOKS (Oxford) in introducing the discussion will deal with the following points:

(1) Athletics, (a) at school, (b) at the university; what amount of medical supervision is practicable? (2) The dangers of athletics during convalescence. (3) Physical training and athletics. (4) The moral aspect of athletics. (5) The duties of the profession, (a) to the individual, (b) to the race with reference to physical development.

The following is a synopsis of the remarks to be made by Dr. CLEMENT DUKES (Rugby):

(1) The Greeks aimed at, and attained, by their well-regulated physical training, the highest perfection of the human form, which also influenced the moulding and elevation of the mind. (2) The strength and wisdom of the next generation depend upon the mental and physical development of the present, for the intellectual value of exercise is as great as its physical value. (3) Athleticism is the "intemperance" of physical exercise, which is injurious to the not fully-grown body. (4) Physical examination and medical direction are necessary to avoid this, so that the feeble may be strengthened by well-regulated exercise, and the strong not injured by unwise and prolonged exertion. (5) How to obviate the evils of athleticism, and in what they consist. (6) Classical instances will be given of the defects of athleticism, and of the difficulties in their correction. (7) Ideal rules for the prevention of the harm occasioned by athleticism. (8) The practical rules in force now at Rugby to obviate these defects, and how they have worked; such rules are necessary to control the impulsive nature of youth, and they should be enforced.

3. Friday, July 30th.—Demonstration on Gastric Illumination by Dr. Theodore Thompson and Dr. H. S. Souttar.

NAVY, ARMY, AND AMBULANCE.

President: Fleet Surgeon J. LLOYD THOMAS, R.N.

Vice-Presidents: Inspector-General ROBERT BENTHAM, R.N. (retired), 22, King's Avenue, Ealing, London, W.; Lieut.-Colonel R. PORTER, R.A.M.C., P.M.O., Station Hospital, Military Barracks, Belfast; Colonel THOMAS H. HENDLEY, I.M.S., C.I.E., 4, London Road, London, N.W.

Honorary Secretaries: Captain M. LOWSLEY, R.A.M.C., St. Michael's Road, Aldershot; Captain HERBERT HUGH BLAIR CUNNINGHAM, M.D., F.R.C.S., 69, University Road, Belfast; Staff Surgeon EDMUND COX, M.B., R.N., The Royal Naval Hospital, Chatham; Captain WILLIAM SALISBURY-SHARPE, R.A.M.C., 8, Cleveland Terrace, Hyde Park, London, W.

The following papers have been accepted:

MAHON, Staff Surgeon F. F., R.N. On the First-Aid Relief rendered after the Messina Disaster.
HENDLEY, Colonel T. H., C.I.E., I.M.S. Contrast between the Treatment of the Wounded under the Moghul Emperors and King Edward VII, Emperor of India.
JAMES, Colonel H., R.A.M.C. The Medical Branch of the Officers' Training Corps.
PORTER, Colonel A. R., R.A.M.C. Short paper with a practical demonstration on Physical Training of Recruits in the Army.
STONY, J. B., F.R.C.S.L., Dublin. Physical and Moral Benefits of Military Training.
LAMBKIN, Colonel F. J., R.A.M.C. Probable Effects in the Services of the New Treatment of Syphilis by means of Organic Arsenical Compounds.
CRAWFORD, Colonel, R.A.M.C. On the Beneficial Results of Recent Sanitary Work in Malta.
WALLIS, Staff Surgeon JAMES GARFITT, R.N. A detailed scheme for an Unexpected Landing Party using Material available on Board Ship.
BASSETT-SMITH, Fleet Surgeon, R.N. Modern Methods of Laboratory Diagnosis of Syphilis.
CARVELL, J. M. Existing Ambulance Organization of the Home Railway Companies.
RIVERS, Dr. W. T. (Newcastle-on-Tyne). Rhinology as an Aid to Diagnosis of Pulmonary Tuberculosis.

OBSTETRICS AND GYNAECOLOGY.

President: JOHN CAMPBELL, M.D., F.R.C.S., Crescent House, University Road, Belfast.

Vice-Presidents: ROBERT ALEXANDER GIBBONS, M.D., 29, Cadogan Place, London; JOHN SINGLETON DARLING, M.B., High Street, Lurgan; CHARLES EDWIN PURSLOW, M.D., 192, Broad Street, Birmingham; EWEN JOHN MACLEAN, M.D., 12, Park Place, Cardiff.

Honorary Secretaries: HENRI THOMAS HICKS, F.R.C.S., Derby; ROBERT JAMES JOHNSTONE, M.B., F.R.C.S., 14, University Square, Belfast.

The Committee have thought it well to select two chief subjects for discussion:

Wednesday, July 28th.—1. The Treatment of the Graver Forms of Puerperal Sepsis. To be introduced by Dr. Thomas Wilson (Birmingham).

Thursday, July 29th.—2. Endometritis. To be introduced by Dr. E. Hastings Tweedy (Dublin).

Dr. HASTINGS TWEEDY will introduce the discussion on endometritis on the following lines:

(1) Eliminating histological considerations, he will classify endometritis anatomically into corporeal and cervical, clinically into acute and chronic. (2) Briefly mention the origin, course, and symptoms of acute endometritis. (3) Treatment in detail of acute endometritis, comprising vaccines from cultures, douches, gauze drainage, manual exploration, and the very occasional use of the blunt flushing spoon curette, condemning entirely the use of the sharp curette. (4) Definition of cases classified as chronic endometritis—that is, all other non-malignant diseases of the endometrium. (5) The underlying causes, and the necessity of treating them. (6) Consideration of the indications and proper method of curettage, with causes of failure. Under indications is placed the symptomatology and mention made of the frequency of deferred symptoms. (7) Possibility of rupturing the uterus, and its proper treatment when recognized. (8) Frequent local

treatment following curettage considered unnecessary and harmful. (9) Local treatment other than curettage and medical treatment. (10) He will insist on curettage before all cervical or vaginal operations and operations for displacement. (11) Treatment of endocervicitis by caustics, astringents, cauterization, etc.

Friday, July 30th.—Consideration of the Report of the Ophthalmia Neonatorum Committee (jointly with the Section of Ophthalmology). Reading of papers.

The following have accepted invitations to assist at the deliberations of the Section: Professor Fehling (Strassburg), Professor Jacob (Brussels), and Professor Whitridge Williams (Baltimore).

Drs. Herman and Roberts (London), Jardine and Munro Ker (Glasgow), Donald and Stanmore Bishop (Manchester), Jellett and Alfred Smith (Dublin), are expected to take part in the discussions.

In the Pathological Part of this Section, Cancer of the Uterus has been chosen as one affording a wide scope for the exhibition of Specimens, Photographs, Microscopic Slides, etc.

These, with any others of interest, will be exhibited in the Pathological Museum.

OPHTHALMOLOGY.

President: JOHN WALTON BROWNE, M.D., 10, College Square North, Belfast.

Vice-Presidents: ARTHUR W. SANDFORD, M.D., 13, St. Patrick's Place, Cork; WILLIAM MARCUS KILLEN, M.D., 9, Clifton Street, Belfast; ALEX. HILL GRIFFITH, M.D., 17, St. John Street, Manchester.

Honorary Secretaries: JAMES ANDREW CRAIG, F.R.C.S., 11, University Square, Belfast; LESLIE JOHNSTON PATON, F.R.C.S., 1, Spanish Place, Manchester Square, London.

The subjects chosen for discussion are:

1. Eye Injuries in their Relation to the Workmen's Compensation Act.

2. The Diseases of the Lymphoid Tissue of the Conjunctiva. To be opened by Mr. Treacher Collins and Professor R. Greef (Berlin).

In his paper, Mr. TREACHER COLLINS will deal with the following points:

The contagious character of trachoma; the "trachoma bodies"; the contagion not air-borne but due to transference of moist discharge; the adenoid layer of the conjunctiva the chief seat of reaction, and the centre of the follicles the position in which the toxin is most intense; "elementary or primary granulations"; trachoma a non-pyogenic disease; essentially a chronic disorder; acute symptoms when present due to mixed infection; natural destruction of trachoma follicles by rupture, by absorption, and by strangulation from new formation of fibrous tissue; "Stellwag's brawny oedema"; similarity of the palpebral conjunctiva in the late stages of trachoma to skin; possibility of curing early cases of trachoma without new formation of fibrous tissue; pannus the result of abrasion of corneal epithelium and infection; treatment of trachoma (a) by rupture or instrumental removal of follicles—expression, Galezowski's excision of the retrotarsal fold, Kuhn's removal of tarsus and conjunctiva; (b) by stimulating absorption of follicles—copper sulphate, jequiritol, x rays, kataphoresis; (c) by stimulating formation of fibrous tissue—*Gratargel*. Conditions other than trachoma with follicular enlargements: (a) atropine and eserine irritation, (b) simple folliculosis, (c) mucopurulent ophthalmia and follicles. Conditions resulting in fibrous tissue formation simulating that produced by trachoma, (a) tubercle, (b) pemphigus, (c) spring catarrh, (d) membranous ophthalmia, (e) burns.

PATHOLOGY.

President: Professor WM. ST. CLAIR SYMMERS, M.B., Queen's College, Belfast.

Vice-Presidents: WALTER SYDNEY LAZARUS-BARLOW, M.D., Cancer Research Laboratory, Middlesex Hospital, London; ARTHUR EDWARD MOORE, M.B., Castlemahon, Blackrock, Cork; ASTLEY VASASOUR CLARKE, M.D., 37, London Road, Leicester; Professor I. WALKER HALL, M.D., 9, Royal Park, Clifton, Bristol.

Honorary Secretaries: ALFRED EDWARD BARNES, M.B., 348, Glossop Road, Sheffield; OTTO F. F. GRÜNBAUM, M.D., 34, Wimpole Street, London, W.; WILLIAM JAMES WILSON, M.D., Pathological Laboratory, Queen's College, Belfast.

PHARMACOLOGY AND THERAPEUTICS.

President: Professor RALPH STOCKMAN, M.D., F.R.S. Edin., The University, Glasgow.

Vice-Presidents: Professor WALTER ERNEST DIXON, M.D., Pharmacological Laboratory, Cambridge; NEWMAN NEILD, M.D., 9, Richmond Hill, Clifton, Bristol.

Honorary Secretaries: VICTOR GEORGE LEOPOLD FIELDEN, M.B., 84, Dublin Road, Belfast; HECTOR CHARLES CAMERON, M.B., Guy's Hospital, London, S.E.

The following subjects have been suggested for discussion:

1. Spinal Anaesthesia. To be opened by Mr. George Chiene, F.R.C.S. Edin., to be followed by Dr. Dudley Buxton, Mr. Robert Campbell, and others.

The following is a synopsis of the opening address by Mr. GEORGE CHIENE, F.R.C.S. Edin.:

Short historical summary of spinal anaesthesia; the drugs at present employed and the amount injected; the technique; the advantages and disadvantages of spinal anaesthesia compared with other methods (1) before the operation, (2) during the operation; the comparative results, immediate and remote; the comparative mortality; question of the use of spinal anaesthesia alone or combined with other methods.

2. The Treatment of Oedema. To be opened Dr. H. D. Rolleston.

The following is a synopsis of Dr. H. D. ROLLESTON'S paper introducing the discussion:

Oedema, being a manifestation of numerous and very different conditions, certain distinct groups of it are recognized: (1) Cardiac oedema and oedema of venous obstruction, primarily mechanical, and due to hydrostatic factors; (2) renal dropsy which, though in some instances, as in granular kidney, largely cardiac, is in its proper sense more complicated; (3) toxic oedemas other than those due to renal disease; (4) inflammatory oedema; (5) oedemas due to nervous causes, that is, hysterical oedema; (6) oedema due to lymphatic obstruction; (7) oedemas of doubtful origin, for example, Milroy's disease. Discussion of treatment is mainly directed to the forms of more widespread oedema. (1) Cardiac Dropsy: Good effect of the recumbent position and of cardiac tonics such as digitalis, caffeine, and its allies diuretic, theobromine, and theocin; restriction of fluid and of intake of salt. (2) Renal Dropsy: The complicated etiology and the natural variations in the amount of urinary excretion make treatment much more problematic and its effects more difficult to estimate with accuracy than in cardiac dropsy. Cases of urinary crises occurring under caffeine, and without any special treatment, are given to illustrate this point. Is reduction of oedema always beneficial in renal disease? Conceivably renal oedema is part of a compensatory process whereby waste products are excreted into tissue spaces, and in this event absorption of oedema fluid may increase toxæmia. An important question is, Should the ingestion of fluid be restricted or not? If an increased consumption of fluid is followed by increased excretion of water and solids, and so by diminution of toxæmia, this is justified; if, on the other hand, increased ingestion of fluid is not followed by increased diuresis and excretion of solids, a restricted regimen is indicated in order to avoid hydraemic plethora. Probably no hard-and-fast rule can be adopted, but each case should be investigated as to the excreting powers of the kidneys. Brief statement of the effect of increased diaphoresis according to von Noorden's views. Effect of purgation partly to remove fluid, partly to diminish toxæmia. Influence of a salt-free diet. Question of incision of oedematous parts and drainage so as to diminish the osmotic tension of the tissues and the local toxic accumulation; method of incision, risks of the procedure. Combination of drainage with free ingestion of fluid. Various drugs in the treatment of dropsy in patients with renal disease.

Paper:

McWALTER, Dr. J. C., Barrister-at-Law, Dublin. The Regulation of Quack Medicine Traffic.

It is hoped that one or two pharmacological demonstrations may be given.

PSYCHOLOGICAL MEDICINE.

President: T. OUTTERSON WOOD, M.D., 40, Margaret Street, Cavendish Square, London.

Vice-Presidents: GEORGE ROBERT LAWLESS, F.R.C.S.I., District Asylum, Armagh; WM. RICHARD DAWSON, M.D., Farnham House, Finglas, co. Dublin; ROBERT HENRY COLE, M.D., 25, Upper Berkeley Street, London, W.; MICHAEL JAMES NOLAN, L.R.C.P. and S.I., Down District Asylum, Downpatrick.

Honorary Secretaries: WALTER SAMUEL SMYTHE, M.B., District Asylum, Antrim; SIDNEY HERBERT CLARKE, M.B., Leicester and Rutland Asylum, Narborough, Leicestershire.

The following subjects have been selected for special discussion in this Section:

July 28th.—(1) Somatic Delusions and Local Lesions. To be opened by Dr. C. A. Mercier.

Dr. MERCIER'S paper describes a case in which delusions of complete obstruction of the bowels, and of having been raped "per rectum" were found to be coexistent with tuberculous ulcers of the jejunum, and of the rectum, and the relation between the delusions and the lesions is discussed. Three possible hypotheses suggest themselves: (1) That the lesions were the cause of the delusions. This is rejected. (2) That the lesions were responsible for the particular character of the delusions in a person who would, without them, have had delusions of some kind. This also is rejected. (3) That the localization of the lesions was due to failure or disorder of the neurotrophic influence of the parts of the cerebrum whose disorder underlay the delusions. This is regarded as the most probable hypothesis.

July 29th.—(2) Considerations upon the Commissioners' Report of the Care and Control of the Feeble-minded. To be opened by Dr. W. R. Dawson. Dr. G. E. Shuttleworth and Dr. W. J. Maguire will also speak.

The following papers have been accepted:

MACCORMAC, Dr. J. M. The Superficial and Deep Reflexes as an Additional Means in the Diagnosis of the Principal Forms of Mental Diseases.

CROTHERS, Dr. T. D., U.S.A. A Study of the Hereditary Influence in the Causation of Imbecility.

SHUTTLEWORTH, Dr. G. E. Mongolian Imbecility.

SCHOFIELD, Dr. A. The Present Position of Applied Psychology in Medicine.

The Secretaries will be glad to receive offers of other papers.

SURGERY.

President: Professor THOMAS SINCLAIR, M.D., F.R.C.S., 22, University Square, Belfast.

Vice-Presidents: CHARLES ALFRED BALLANCE, M.V.O., M.S., F.R.C.S., 106, Harley Street, W.; Sir PETER O'CONNELL, M.D., 9, College Square North, Belfast; ARTHUR JOHN DREW, F.R.C.S., Water Hall, St. Aldate's, Oxford; JOHN GALWAY COOKE, M.B., City and County Infirmary, Londonderry; ARTHUR BROWNLOW MITCHELL, F.R.C.S.I., 18, University Square, Belfast.

Honorary Secretaries: W. THELWALL THOMAS, F.R.C.S., 84, Rodney Street, Liverpool; G. LENTHAL CHEATLE, C.B., F.R.C.S., 117, Harley Street, London; HOWARD STEVENSON, M.B., F.R.C.S.I., 2, College Square North, Belfast; JAS. BERNARD MOORE, M.B., 11, Clifton Street, Belfast.

Special discussions on the following subjects will be held on Wednesday, July 28th, and Thursday, July 29th:

1. The Operative Treatment of Obstructive Jaundice and the Proper Selection of Cases. Introduced by (1) Mr. B. G. A. Moynihan; (2) Sir Thomas Myles. The following have signified their intention of taking

part: Mr. E. Stanmore Bishop, Mr. Douglas Drew, Mr. A. B. Mitchell, Mr. W. I. de C. Wheeler, and Mr. K. W. Monsarrat.

2. Modern Methods in the Treatment of Tuberculous Disease of Joints. Introduced by (1) Sir William Macewen, F.R.S.; (2) Mr. Robert Jones. The following will speak: Mr. Douglas Drew, Mr. A. B. Mitchell, Mr. R. C. Dun, and Mr. T. S. Kirk.

Friday, July 30th, will be devoted to the reading of papers on subjects other than the above.

The following papers have been accepted:

SYME, G. A. Some Unusual Cases of Echinococcus (Hydatid) Cyst, with remarks on Diagnosis and Treatment.
GROVES, ERNEST W. H. The Radical Treatment of Cancer of the Stomach—Methods, Results, and Statistics.
FREYER, P. J. A recent series of 200 cases of Enucleation of the Enlarged Prostate, with special reference to the operation (1) in octogenarians, (2) in cases of extremely large prostate.
BIRD, F. D. Operation for Liver and Lung Hydatids.
MITCHELL, A. B. Perforative Duodenal Ulcer.
NEUBOLT, G. P. Some Cases of Resection of Intestine.
BLANEY, ALEXANDER. Notes on Four Cases of Removal of the Gasserian Ganglion.

Facilities will be provided for showing specimens and drawings to illustrate subjects under discussion.

TROPICAL MEDICINE.

President: CHARLES WILBERFORCE DANIELS, M.B., London School of Tropical Medicine, Albert Docks, London.

Vice-Presidents: Lieutenant-Colonel ANDREW DEANE, M.D., F.R.C.S.I., I.M.S., Royal Victoria Hospital, Belfast; Surgeon-General W. R. BROWNE, M.D., C.I.E., 5, Royal Crescent, Holland Park Avenue, London.

Honorary Secretaries: JAMES COLVILLE, M.D., 7, University Square, Belfast; Dr. ANTON BREINL, Director Runcorn Research Laboratories.

The following subjects have been selected for discussion:

Wednesday, July 28th, 10 a.m.—Persistence of the Tropical Diseases of Man due to Protozoa. The discussion will be opened by the President.

Thursday, July 29th, 10 a.m.—Treatment of Chronic Recurrent Dysentery, with Special Reference to the Possibilities of Surgical Treatment. The discussion will be opened by Mr. J. Cantlie.

Friday, July 30th, 10 a.m.—Feeding and Treatment of Children in the Tropics. The discussion will be opened by Dr. W. Carnegie Brown.

Dr. CARNEGIE BROWN, in introducing the discussion, will deal with the following points:

Infant mortality in the tropics: comparative statistics. Feeding problems: Unsatisfactory supply of fresh milk; utility of preserved milk; other substitutes. Relative infrequency in the tropics of the zymotic diseases of early life—for example, diphtheria, scarlet fever, acute rheumatism, etc.; consequent rarity of serious after-effects. Prevalent disorders of children: Tetanus, infantile diarrhoea, helminthiasis, dysentery, continued fevers, malaria, infantile splenomegaly, biliary cirrhosis, anaemia, and other marasmic conditions, yaws; prevention and treatment. Possibility of rearing healthy European children in the tropics; age for return to a temperate climate.

The Committee will be glad to receive pathological specimens, photographs, drawings, or microscopical preparations illustrative of any subject in Tropical Medicine.

Honorary Local Secretaries—

HENRY LAWRENCE McKISACK, M.D., M.R.C.P.,
17, University Square, Belfast.

Cecil EDWARD SHAW, M.A., M.D., M.Ch.,
29, University Square, Belfast.

HOWARD STEVENSON, B.A., M.B., F.R.C.S.I.,
2, College Square North, Belfast.

PROVISIONAL TIME TABLE.

FRIDAY, JULY 23RD, 1909.

12 noon.—Annual General Meeting, followed by Representative Meeting.

SATURDAY, JULY 24TH, 1909.

9.30 a.m.—Representative Meeting.

MONDAY, JULY 26TH, 1909.

10 a.m.—Representative Meeting.

7.30 p.m.—Annual Conference of Secretaries of Division and Branches.

TUESDAY, JULY 27TH, 1909.

10 a.m.—Council Meeting.

10.30 a.m.—Representative Meeting (if required).

2.30 p.m.—Adjourned General Meeting.
Induction of President.

6.30 p.m.—President's Address.

WEDNESDAY, JULY 28TH, 1909.

9.30 a.m.—Council Meeting.

10 a.m.—Sectional Meetings.

10.30 a.m.—Representative Meeting (if required).

12.30 p.m.—Address in Medicine.

7.30 p.m.—Annual Dinner.

THURSDAY, JULY 29TH, 1909.

8 a.m.—National Temperance League Breakfast.

9.30 a.m.—Council Meeting.

10 a.m.—Sectional Meetings.

12.30 p.m.—Address in Surgery.

8.30 p.m.—Reception.

FRIDAY, JULY 30TH, 1909.

10 a.m.—Sectional Meetings.

12.30 p.m.—Address in Obstetrics.

8 p.m.—Popular Lecture.

8.30 p.m.—Reception.

SATURDAY, JULY 31ST, 1909.

Excursions.

THE PATHOLOGICAL MUSEUM.

The following Committee has been appointed to organize the pathological museum:

President: Professor W. ST. CLAIR SYMMERS.

Honorary Secretaries: THOMAS HOUSTON, M.D.;
W. J. WILSON, M.D.

J. S. DICKIE, M.B.	C. H. P. D. GRAVES, M.D.
ROWLAND HILL, M.B.	(Cookstown).
C. G. LOWRY, M.D.	Professor McWEENEY (Dublin).
J. E. MACLWANE, M.D.	Professor MOORE (Cork).
JOHN M'LEISH, M.B.	C. H. NESBITT, M.D. (Randals-
W. J. MAGUIRE, M.D.	town).
J. C. RANKIN, M.D.	Professor O'SULLIVAN (Dublin).
FRED. SMYTH, M.D.	R. T. ROWLETTE, M.D. (Dublin).
ERNEST WALES, M.D.	Professor WHITE (Dublin).
J. SINGLETON DARLING, M.D.	JOHN WILSON, M.D. (Castle-
(Lurgan).	blaney).

EX-OFFICIO MEMBERS.

The President-elect: Sir WILLIAM WHITLA, M.D., LL.D.

The Local Honorary Treasurer: JOSEPH NELSON, M.D.

The Local Honorary Secretaries: H. L. McKISACK, M.D.; C. E. SHAW, M.D.; HOWARD STEVENSON, F.R.C.S.I.

The Committee propose that the material should be arranged under the following heads:

I. Exhibits bearing on discussions and papers in the various sections.

II. Specimens and illustrations relating to any research work.

III. Instruments relating to clinical diagnosis and pathological investigation.

IV. Individual specimens of special interest, or a series illustrating some special subject.

It is also proposed to make a special effort to gather together a series of exhibits relating to:

- (a) Tuberculosis.
- (b) Diseases of warm climates.
- (c) Cancer of the uterus.
- (d) X-rays and photography.

The Committee wish it to be understood that the above are only suggestions, and if there is any subject in which Members are specially interested, and of which interesting specimens can be supplied, they will be glad to hear from them.

The Museum will occupy a central position, and will be easy of access.

It is hoped that it will be possible for arrangements to be made whereby exhibitors may have an opportunity of demonstrating their specimens.

THOMAS HOUSTON,
W. J. WILSON,
Honorary Secretaries.

Communications should be addressed to one of the Honorary Secretaries at Queen's University, Belfast.

Meetings of Branches & Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

BATH AND BRISTOL BRANCH: TROWBRIDGE DIVISION.

The annual meeting was held at the Town Hall, Trowbridge, on Saturday, May 29th, at 3 p.m., Dr. TUBB-THOMAS in the chair. Eleven members were present.

Election of Officers.—The following were elected to the various offices for the ensuing year: *Chairman*, Dr. Rattray (Frome); *Vice-Chairman*, Dr. H. P. Tayler (Bradford-on-Avon); *Secretary*, Dr. Pearce; *Representatives on Branch Council*, Drs. Tubb-Thomas, Rattray, and H. P. Tayler; *Executive Committee*, Drs. Rumboll, Shorland, and Bond.

Financial Statement.—The financial statement was presented and adopted.

Medical Certification of Suitability for Hospital Treatment.—The report on medical certification of suitability of patients for hospital treatment was considered, and it was resolved:

That the meeting approves the recommendation of Council.

Contributions to Hospitals by Employers and Employees.—The report on contributions to hospitals by employers of labour and employees was considered, and it was resolved:

That the meeting disapproves the motion of the Representative Meeting.

Fresh Public Medical Institutions.—With regard to the statement as to fresh public medical institutions it was resolved:

That the meeting approves the motion of Council.

Sanatorium for Tuberculous Workers.—On this subject it was resolved:

That the meeting accepts the resolution of the Representative Meeting on the ground that the institution referred to is not a charitable institution.

Examination of Recruits for Territorial Forces.—Discussion took place on the question of examination of recruits for the Territorial Forces. It was resolved that the fee for such examination should be not less than 2s. 6d.

BORDER COUNTIES BRANCH.

A GENERAL meeting of the Branch was held in the Lochmaben Combination Hospital for Infectious Diseases on Friday, May 21st. The President of the Branch, Dr. JAMES MACDONALD, of Carlisle, was in the chair, and there were about thirty other members of the Branch present.

Confirmation of Minutes.—The minutes of the previous meeting were read by the SECRETARY, approved, and signed by the President.

Apologies.—Apologies for absence were intimated from Drs. Edington, Harrison-Mitchell, N. MacLaren, Morison, and Doughty.

Local Government Board and Unqualified Practice.—A short informal discussion on the subject of the Local Government Board's circular regarding unqualified practice then took place. This was followed by the discussion of a most excellent afternoon tea, which was provided by the kindness of the hospital authorities, to whom and to Dr. Maxwell Ross the success of an unusual type of meeting is largely due.

Visit to Hospital.—A walk through the hospital had preceded the general meeting, and the members had the advantage of having everything explained and demonstrated to them by Dr. Maxwell Ross. To many of the members the hospital is a striking example of the most up-to-date method of dealing with infectious diseases.

Lochmaben Sewage Works.—The local motorists having very kindly put their cars at the disposal of members attending the meeting, the venue was adjourned to the Lochmaben Sewage Works, a very recent installation and a very successful one. As a means of disposing of the sewage it is perfectly satisfactory: and as in the four years of its existence it has only cost £40 altogether, including repairs, it must surely rank as one of the cheapest in the country. Provost HALLIDAY, of Lochmaben, attended the meeting and kindly explained to the members the method by which it destroyed the sewage, and the effluent was exhibited and tested in the presence of every one who was able to get sufficiently near to see what was being done.

Lockerbie Sewage Works.—A different method of sewage disposal was demonstrated by a visit to the Lockerbie Sewage Works, a larger and more costly affair, where everything was again explained and where the result gained more than justified the expenditure.

Dinner.—Dinner at the Blue Bell concluded the day's proceedings. Nearly all the members present at the meeting stayed to dinner, at which Provost Halliday and Mr. McJarrow, the town clerk of Lockerbie, were also present. In proposing the health of the two latter gentlemen the President delighted the large company by making one of those apposite and eloquent speeches for which he has long been renowned.

CONNAUGHT BRANCH.

The annual meeting of this Branch was held at 1 p.m. on May 20th, at Ryan's Hotel, Claremorris, Mr. R. B. MAHON in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read, confirmed, and signed.

Apologies for Non-attendance.—A number of letters of apology for non-attendance were read.

Election of Officers.—The following members were elected officers for the ensuing year: *President*, Mr. R. B. Mahon; *President-elect*, Dr. Joseph MacDonnell (Roscommon); *Honorary Secretary*, Dr. John Mills; *Representative for the Representative Meeting*, Dr. T. B. Costello. The Branch Secretary was given power to appoint a deputy if he was unable to attend.

Executive Committee.—The following Executive Committee was elected for the year: Drs. C. L. Birmingham, J. Carroll, T. B. Costello, J. A. Hanrahan, R. W. Kelly, R. J. Kinkadee, Joseph MacDonnell, R. B. Mahon, R. J. Martyn, John Mills.

Report of Executive Committee.—The report of the Executive Committee recommending the adoption of ethical rules was received and adopted.

New Members.—The committee also reported that Drs. Crowley and Quinlan were elected members.

EDINBURGH BRANCH: SOUTHERN DIVISION.

THE annual meeting of the Division was held in the Oddfellows' Hall, Forrest Road, on Friday, June 4th, at 8.15 p.m., Dr. MATHESON in the chair. There were also present Drs. Bowie, Cumming, Boyd Jamieson, H. Jamieson, Johnston, McDonald, Marshall, Simla Paterson, Gordon Price, Proudfoot, Salt, Scott, Stevens, A. D. Stewart, A. Walker, and Dewar (Honorary Secretary).

Apologies for Non-attendance.—Apologies for unavoidable absence were received from Drs. Allan, Blaikie, and Edmund Price.

Confirmation of Minutes.—The minutes of the last meeting and adjourned meeting were read, approved, and signed.

Election of Officers.—The following gentlemen were elected officers for the ensuing year: *Chairman*, Dr. Lundie; *Vice-Chairman*, Dr. Proudfoot; *Representative to Representative Meetings*, Dr. A. Walker; *Joint Secretaries*, Drs. Dewar and S. Paterson; *Representatives on Branch Council*, the Chairman and Junior Secretary; *Executive Committee*, Drs. Scott, Johnston, Porter, G. Price, E. Price, Matheson, Gullen, Dickson, and Stevens.

Earlier Election of Representative.—A motion to alter Divisional Rule 7 so as to permit of the election of the Representative to the Representative Meeting "not more than nine months nor less than three weeks" before the Annual Representative Meeting, was unanimously adopted.

The late Dr. C. Kennedy.—A feeling reference was made to the late Dr. C. Kennedy by the Chairman, and a minute expressing the deep regret of the Division for his untimely death and their sympathy with Mrs. Kennedy and family was ordered to be engrossed in the minute book. The Secretary was instructed to send an extract of the minute to Mrs. Kennedy.

Representation of Local Medical Profession on Hospital Boards.—The report on this matter was unanimously approved.

Ophthalmia Neonatorum Report.—This report was unanimously approved.

Instructions to Representative.—The Provisional Agenda of the Representative Meeting was then discussed in detail, and Dr. Walker was fully instructed as to the Division's findings on the various matters. Motion 76, by the Liverpool (Western) Division, was to be vigorously opposed.

Arrangements for Future Meetings, etc.—Medical subjects for discussion at next meeting were considered. It was unanimously resolved to hold a "smoker" in the early winter, the carrying out of the details of which being referred to the executive. An executive meeting will be held in September or October.

Vote of Thanks to Retiring Chairman.—In proposing a vote of thanks to the Chairman, Dr. PROUDFOOT expressed the regret of the members at his compulsory demission of office, and their feelings of gratitude to him for his unflinching attendance and unvarying tact and courtesy in presiding over the affairs of the Division during the past three years. This was seconded and unanimously carried. Dr. MATHESON in a few well-chosen words replied.

GLASGOW AND WEST OF SCOTLAND BRANCH: GLASGOW EASTERN DIVISION.

THE annual meeting of this Division was held in Bellgrove U. F. Church Hall on Friday, June 4th, at 4 p.m.; Dr. MILLER SEMPLE, the Chairman of the Division, presided, and eleven members were present.

Confirmation of Minutes.—The minutes of the last meeting were read, approved, and signed.

Election of Officers.—The office-bearers for 1909-10 were elected as follows: *Chairman*, John Patrick, M.B.; *Vice-Chairman*, Malcolm Black, M.D.; *Secretary and Treasurer*, William Bryce, M.D.; *Representative to Representative Meetings*, W. L. Muir, L.R.C.P., etc.; *Representatives to Branch Council*, W. L. Muir, L.R.C.P., etc., William Bryce, M.D.; *Executive Committee*, Miller Semple, M.B., H. A. McLean, M.B., Robert Scott, M.B., James Dunlop, M.B., T. C. Barras, M.B., R. McC. Service, M.D., P. S. Buchanan,

M.B., James Battersby, F.R.C.S. Eng., W. J. H. Sinclair M.B.

Representation of the Local Medical Profession on Hospital Boards.—On this question it was resolved by 5 to 3 to support the action taken by the Hampstead and Wandsworth Divisions.

NOTICES OF MOTION.

(a) *Notices Affecting the Charter.*—The Representative was instructed to oppose these.

(b) *Notices Affecting the Present Regulations of the Association.*—The Representative was instructed to give these his support.

(c) *Notices Affecting the Administration of the Association.*—These were the subject of considerable discussion. Dr. RUSSELL moved and Dr. SERVICE seconded that the Representative be asked to oppose the motion by the Wandsworth Division regarding the distribution of the capitation grant. As an amendment Dr. SEMPLE moved and Dr. SCOTT seconded the recommendation of the Executive Committee, that the Representative give this motion his support, and this was carried by 6 to 5. The Representative was instructed to give the other motions his general support with the exception of that regarding the scientific work of the Association, where he was left to use his own discretion.

(d) *Notices Affecting the Policy of the Association.*—The Representative was instructed to support these, with the exception of those relating to medical teaching and medical examinations, which he was to oppose.

Medical Examination of School Children.—The recommendations of the Medico-Political Committee were unanimously approved, and the Representative instructed accordingly.

Sanatoriums for Tuberculous Workers.—The Division concurred with Paragraph 3 (a), (b), and (c), and also with the resolution of the last Representative Meeting.

Earlier Election of Representative.—Dr. MUIR moved, and Dr. FINDLAY seconded, that in Rule 7 "three months" be altered to "nine months," to allow of the earlier election of the Representative in Representative Meetings. Dr. SERVICE, seconded by Dr. RUSSELL, moved that the Rule remain as it stands at present. On a vote the alteration was carried by 7 to 2.

Annual Meeting of Division.—It was unanimously agreed to alter Rule 11 so that the annual meeting of the Division might be held either in May or June instead of in June as at present.

This concluded the business.

GIBRALTAR BRANCH.

A MEETING of this Branch was held on May 25th. Colonel MURRAY was in the chair, and the following were present: Deputy Inspector-General F. J. Lilly, R.N., Staff Surgeon Daw, R.N., Drs. Oman, Abrines, Lyons, Gill, and L. D. Parsons, Honorary Secretary.

Election of Representative.—Major H. A. L. Howell, R.A.M.C., was elected Representative for the Branch, and Dr. A. W. W. Dowling a delegate.

Cases.—In addition to the previous business several cases were shown by the HONORARY SECRETARY (Dr. L. D. Parsons).

Paper.—Staff Surgeon DAW read a paper on Bier's congestive treatment.

LANCASHIRE AND CHESHIRE BRANCH: SALFORD DIVISION.

THE annual meeting of the Salford Division was held on May 28th, Dr. O'GRADY being in the chair.

Election of Officers.—The following officers were elected for the ensuing year: *Chairman*, Dr. W. C. Brown; *Vice-Chairman*, Dr. J. Price Williams; *Secretary*, Dr. Taylor; *Representatives on the Branch Council*, Dr. Hamill and the Secretary; *Representative to the Annual Representative Meeting*, Dr. Taylor; *Executive Committee*, Drs. A. C. Clarke, Carr, O'Grady, Stuart, and Wolstenholme; *Representatives to the Joint Committee of Divisions*, Drs. Bell, Hamill, Owen, Wolstenholme, and the Secretary.

Annual Report.—The annual financial statement for 1908 was read, and showed that the Division had at the end of the year a balance in hand of £3 18s. 2d.

Overcrowding of the Profession.—The SECRETARY announced that it was too late for a notice of motion for the Representative Meeting advocating that a letter should be sent to head masters of public schools with reference to the overcrowded state of the profession, but it might be possible to introduce such a motion on the report of the Medico-Political Committee, and the Representative was instructed to do so if possible.

The Referendum.—The Representative was instructed to propose the following motion when the subject of the Charter was considered by the Representative Meeting:

That this Representative Meeting is convinced that the Charter as it stands represents the opinion of the great majority of the members of the Association, but that, nevertheless, with a view to allaying the anxiety expressed by certain Branches as to the provisions for the Referendum, it be an instruction to the Council to consider and report to the Representative Meeting as to the practicability and desirability of amending the ordinances and by-laws so as to provide that whenever, in the opinion of the Council, the Referendum is concerned with any of the following subjects—namely:

1. Promoting the candidature of members for Parliament.
2. Establishing or abandoning any scheme for medical defence.
3. Establishing or abandoning any provident or benevolent scheme for the benefit or assistance of members of the profession or of the Association or of the staff employed by the Association.
4. Any increase in the annual subscription amounting to 5s. or over 5s.

In all such cases the Referendum shall be taken by means of voting papers sent to every member of the Association, due safeguards being provided for the questions submitted in such voting papers being impartially placed before the members, and that on all other subjects the Referendum shall be taken by voting of members attending in Division meetings as at present provided by the Charter.

The Warehousemen and Clerks' Association.—It was announced that full information had now been obtained through the Medical Secretary as to the Warehousemen and Clerks' Association, and the Division thereupon authorized the Joint Committee of the Manchester and Salford Divisions to deal with the matter, with full power to act for the Salford Division.

The Midwives Act.—Dr. TAYLOR announced that he had been appointed to represent the Association to give evidence before the Departmental Committee on the working of the Midwives Act, and he had given evidence specially as to the working of the Act in Manchester and Salford, and had urged the suggestions of the Salford Division and of the Joint Committee of the Divisions. He said that the suggestions from Manchester and Salford in every respect supported the general evidence of the Association.

Earlier Appointment of Representative.—It was unanimously resolved to alter the Division rules so as to provide for the election of the Representative to the annual Representative Meeting being made as early as possible after January 1st in each year.

The Rochdale Division Proposal for Two Grades of Members.—The Representative was instructed to vote against the proposal of the Rochdale Division which would create two grades of members in the Association.

Representation in the House of Lords.—It was resolved to support the recommendation of the Medico-Political Committee that members of the House of Lords should be nominated by the Association to represent it officially on questions coming before the House of Lords.

Distribution of Capitation Grants.—The meeting resolved to oppose the motion of the Wandsworth Division dealing with the distribution of capitation grants to Divisions.

On other matters coming before the Representative Meeting, and not dealt with by the Division, the Representative was instructed to use his discretion in voting.

METROPOLITAN COUNTIES BRANCH:

MARYLEBONE DIVISION.

The annual meeting of the Division was held at the rooms of the Medical Society of London, Chandos Street, W., on Wednesday, May 26th, at 5 o'clock, Dr. DE HAVILLAND HALL (Chairman of the Division) in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Election of Officers.—The following having been nominated by the Executive Committee were elected officers for the ensuing year: *Chairman*, Dr. F. J. Smith; *Vice-Chairman*, Mr. L. E. Creasy; *Honorary Treasurer*, Dr. Comyns Berkeley; *Honorary Secretary*, Mr. Donald Armour; *Representatives of Division on Branch Council*, Sir Victor Horsley, Dr. Lauriston Shaw, Dr. G. A. Heron, Dr. W. E. Burton, Mrs. Berry, M.D., *Honorary Secretary*; *Representative in Representative Meetings*, Mr. Donald Armour.

Nominations for Election to the Central Council.—The meeting recommended the nomination of Sir Victor Horsley, Dr. Lauriston Shaw, and Dr. F. J. Smith.

Report of Executive Committee.—The annual report of the Executive Committee was read and ordered to be placed on the minutes.

Proposed Alteration of Rules.—Report of the Executive Committee upon the proposed alterations in the Rules of the Division. The report was received, and after discussion thereon it was adopted with certain amendments.

Whole-time Medical Officers of Health.—The Public Health Committee's memorandum on whole-time medical officers of health (SUPPLEMENT to the BRITISH MEDICAL JOURNAL, January 23rd, 1909) was discussed. The meeting expressed the opinion

That as far as possible medical officers of health should be debarred from engaging in private practice.

Federated Societies' Medical Benefit Association.—This subject (BRITISH MEDICAL JOURNAL, February 13th, p. 425) was discussed. It was proposed by Sir VICTOR HORSLEY, seconded by Dr. HERON, and carried unanimously:

That inasmuch as the scheme of the Federated Societies' Medical Benefit Association is contrary to the essential principles regulating contract practice agreed to by the British Medical Association, the Marylebone Division is of opinion that the scheme in question should be strenuously resisted by the medical profession.

Departmental Committee re Midwives Act.—It was decided to refer the Central Office to the report issued by the London and Counties Medical Protection Society upon the subject.

Vote of Thanks to Retiring Chairman.—It was proposed by Sir VICTOR HORSLEY, seconded by Dr. LAURISTON SHAW, and carried with acclamation:

That a hearty vote of thanks be tendered to the retiring Chairman Dr. F. de Havilland Hall, for his services to the Division during the past year.

After Dr. DE HAVILLAND HALL had replied the meeting terminated.

TOTTENHAM DIVISION.

The annual general meeting of the Tottenham Division was held at the Prince of Wales's Hospital at 4.30 p.m., on June 4th.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Earlier Election of Representative.—It was resolved:

That Rule 7 be altered to read "not more than nine months" instead of "not more than nine and less than three."

Unqualified Practice.—A letter from the Medical Secretary regarding unqualified practice was read. The consideration of the matter was postponed to the next meeting.

Election of Officers.—The following officers were elected for the ensuing year:—*Chairman*, Dr. F. Tresilian; *Vice-Chairman*, Dr. J. Richmond Bryce; *Representative at Representative Meeting*, Dr. J. R. Fuller; *Honorary Secretary and Treasurer*, Dr. H. F. Staunton; *Executive and Ethical Committee*, Drs. Chappell, Fogarty, Greenwood, Grant, Orlebar, and Smith.

SOUTHERN BRANCH:

PORTSMOUTH DIVISION.

THE annual meeting of this Division was held at 5, Pembroke Road, Portsmouth, on June 2nd, at 3.45 p.m., Dr. W. CARLING in the chair. There were also present: Drs. McEldowney, Colt, Hann, Blake, Leon, Hackman, James Green, Sheahan, Milne Thomson, J. Phillips, Child, Bosworth Wright, L. Maybury, and B. H. Mumby.

Apology for Non-attendance.—A letter of apology for absence was read from Dr. Gittings, R.N., H.M.S. *Foreright*.

The Division and the Election of a Representative.—A letter was read from Mr. Smith Whitaker, stating that the Council of the Association had decided that the Portsmouth Division should form an independent constituency for the election of a Representative at the Representative Meeting for the year 1909-10.

Medical Inspection of School Children.—The report of the Medico-Political Committee to the Divisions on medical inspection of school children, and treatment of those found defective, based upon consideration of the replies of Divisions to the report of the Committee issued on December 22nd, 1908 (see SUPPLEMENT OF BRITISH MEDICAL JOURNAL, May 15th, 1909), was considered. Dr. McEldowney proposed, and Dr. HACKMAN seconded, and it was carried unanimously:

That the Recommendations A. to M. inclusive in that report be agreed to, but that this Division supports the original notice of Dr. A. H. Williams (Watford and Harrow) as it appears on p. 19. Subappendix II in that report instead of Recommendation N.

Ophthalmia Neonatorum Report.—The report of the Ophthalmia Neonatorum Committee (see SUPPLEMENT to BRITISH MEDICAL JOURNAL, May 8th, 1909) was considered. Dr. SHEAHAN proposed, Dr. LEON seconded, and it was carried unanimously:

That this Division supports the recommendation for prevention, paragraphs (a) to (f) in that report.

Election of Officers.—Dr. CARLING proposed, Dr. HACKMAN seconded, and it was carried unanimously:

That Dr. T. A. Colt be Chairman of this Division for the ensuing twelve months.

Dr. COLT then took the chair amidst applause. Dr. COLT proposed, Dr. J. PHILLIPS seconded, and it was carried unanimously:

That Dr. McEldowney be Vice-Chairman.

Dr. MILNE THOMSON proposed, Dr. SHEAHAN seconded, and it was carried unanimously:

That Drs. Blackman, L. Maybury, and Hackman be the Representatives on the Branch Council.

Dr. LEON proposed, Dr. R. J. GREEN seconded, and it was carried unanimously:

That Dr. B. H. Mumby be the Representative for this Division in Representative Meetings.

It was proposed by Dr. COLT, seconded by Dr. McEldowney, and carried unanimously:

That the Executive Committee be composed of the following members: Drs. Burrows, Carling, J. W. Cousins, J. Green, Leon, Phillips, Sheahan, Milne Thomson, H. M. Way, and Bosworth Wright.

It was proposed by Dr. LEON and seconded by Dr. HACKMAN, and carried unanimously:

That Mr. C. P. Child be Clinical Secretary.

It was proposed by Dr. COLT, seconded by Dr. HACKMAN, and carried unanimously:

That Dr. Mumby be Medico-Political Secretary and Honorary Treasurer.

Date of Election of Representative.—Mr. CHILDE proposed, Dr. COLT seconded, and it was carried unanimously:

That the Representative of this Division in the Representative Meetings of the Association be elected at the first meeting of the Division after October 31st of each year.

Promised Paper.—Dr. VICTOR BLAKE kindly promised to read a paper on the medical inspection of school children early in 1910.

Balance Sheet.—The following balance sheet was presented:

Balance brought forward	...	£19 12 1
Capitation grant	...	10 14 0
		£30 6 1
Stride, for printing	...	£6 14 5
Rent	...	2 8 10
Expenses of clinical meeting	...	5 0 0
Postages, wrappers	...	0 12 0
Stamps, Secretary	...	0 5 8½
		15 4 8½
Balance	...	£15 1 4½

The above accounts have been audited and found correct by Drs. James Green and Leonard Hackman, and were approved on the proposition of Dr. LEON, seconded by Dr. MILNE THOMSON.

SALISBURY DIVISION.

THE annual meeting of the Division was held on May 19th at the Infirmary, Salisbury, at 8.15 p.m. Dr. L. S. LUCKHAM was in the chair, and there were present Drs. Richmond, C. R. Straton, Kempe, Baskin, Saunders, Genge, Blackmore, March, Fison, Armitage, W. Gordon, Douglas, Atkinson, and J. E. Gordon (Honorary Secretary).

Dinner.—The meeting was preceded by dinner at the County Hotel at 7 p.m.

Confirmation of Minutes.—The minutes of the last meeting were read and approved.

Medical Inspection of School Children.—The HONORARY SECRETARY gave an account of the conference held on March 31st at the infirmary relating to the medical inspection of school children, called by the Salisbury Division, and attended by representatives of the infirmary, provident dispensary, and the Salisbury, Wilton, Amesbury, Tisbury, and Warminster Boards of Guardians; by six medical inspectors of school children in the district; and by six members of the Division. The following resolutions were passed by the conference:

1. That the present means available are sufficient for the carrying out of treatment, but require organization and co-operation to make them thoroughly effective. To effect this organization this meeting is of opinion that the infirmary out-patient department should be utilized in conjunction with the dispensary and other provident organizations, so that treatment may be kept as much as possible on the provident basis.
2. That the treatment for ordinary illness is arranged for by the present contracts of medical officers with their authorities.
3. That a special scale of fees for minor operations, eye examinations, and consultations should be drawn up and submitted to the various authorities for their guidance.

Election of Officers.—The following office-bearers were elected for the ensuing year: *Chairman*, C. A. Ensor, Tisbury; *Vice-Chairman*, L. S. Luckham, Salisbury; *Honorary Secretary and Treasurer*, J. E. Gordon, Salisbury; *Representative for Representative Meetings*, C. R. Straton, Wilton; *Representatives on Branch Council*, L. S. Luckham, Salisbury; J. O. March, Amesbury; *Executive Committee*, H. P. Blackmore, Salisbury; G. Kempe, Salisbury; R. L. Willcox, Warminster; J. A. Armitage, Salisbury.

Honorary Secretary's Report.—The Honorary Secretary's report and balance-sheet were passed, showing a balance in hand of £11 15s. 9½d.

Whole-time Medical Officers of Health.—The question referred to the Division—Should medical officers of health be debarred from engaging in private practice?—was discussed, and Dr. STRATON proposed that part-time medical officers of health are preferable in country districts. This was seconded by Dr. BLACKMORE. Dr. KEMPE moved an amendment that:

Regarding the question as one of principle, that the answer be in the affirmative.

This was seconded by Dr. W. GORDON. Dr. Kempe's amendment was carried by 4 votes to 3. It was then carried, *nemine contradicente*, as a substantive motion.

Medical Certification of Suitability for Hospital Treatment.—This question was next considered. It was proposed by Dr. J. E. GORDON, seconded, and carried *nemine contradicente* (5 voted for):

That this Division approves of medical certificates of suitability for hospital treatment being required as a condition of hospital treatment, except in case of casualties.

Contributions to Hospitals by Employers and Employees.—This matter was left to the discretion of the Representative of the Division.

Fresh Public Medical Institutions.—This matter was also referred to the discretion of the Representative.

Sanatoriums for Tuberculous Workers.—On this subject it was proposed by Dr. KEMPE:

That, in the opinion of the Representative Meeting, it is not advisable that members of the Association should in future accept or continue to hold appointments as honorary local medical referees to the National Association for the Establishment and Maintenance of Sanatoriums for Workers suffering from Tuberculosis.

The resolution was seconded by Dr. STRATON and carried *nemine contradicente* (8 voted).

Representation of Local Medical Profession on Hospital Boards.—On this question Dr. J. E. GORDON moved:

That it is not practicable or desirable that medical men should act on committees of hospitals, etc., unless qualified to act in the usual way.

Dr. KEMPE seconded the resolution, which was carried *nemine contradicente* (8 voted).

Paper.—Mr. BASKIN read a paper on Obsession and Insane Movements. The insane movements were shown by the cinematograph. Mr. Baskin also showed by means of the cinematograph a series of films illustrating various gaits and reflexes in nervous disorders. A unanimous vote of thanks was accorded Mr. Baskin for his paper and the films shown.

Next Annual Meeting of the Southern Branch.—It was decided that the Salisbury Division should invite the Southern Branch to hold their annual meeting in 1910 at Salisbury.

Nomination to Branch Council.—Mr. L. S. LUCKHAM, as Vice-Chairman of the Branch, was nominated to the Branch Council.

SOUTH WALES AND MONMOUTHSHIRE BRANCH: MONMOUTHSHIRE DIVISION.

The annual meeting of this Division was held in the Newport and Monmouthshire Hospital on Friday, May 28th. Dr. W. F. NELIS, Chairman, presided, and the attendance numbered 26.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Election of Officers.—The following officers were elected for the ensuing year: *Chairman*, O. E. B. MARSH; *Vice-Chairman*, A. G. LAWRENCE; *Honorary Secretaries*, R. J. COULTER, W. B. BASSETT; *Representative at Representative Meeting*, W. J. GREER; *Representatives on Branch Council*, O. E. B. MARSH, W. F. NELIS, W. D. STEEL, and T. MORRELL THOMAS. *Members of Executive Committee*, J. S. CLARKE, S. HAMILTON, R. W. HAZLETT, and J. O. KEEFE. *Representatives on Branch Contract Practice Committee*, W. J. GREER, J. W. MULLIGAN, and D. T. RICHARDS.

Installation of New Chairman.—On the election of Dr. Marsh, Dr. Nelis vacated the chair in his favour.

Report of Executive Committee.—The report of the Executive Committee was read and adopted.

Medical Certificates as to Suitability for Hospital Treatment.—It was resolved:

That the Division approves of the proposal that a medical certificate of suitability for hospital treatment should be required as a condition of hospital treatment except in cases of casualties.

Fresh Public Medical Institutions.—It was resolved that the proposal—

That it is desirable that no fresh public medical institution should be opened without previous consultation with the local medical profession through some organized body, such as the Division of the British Medical Association in the area of which it is proposed to establish such new institution, and that it be an instruction to the Council to give effect to this principle in considering applications from Divisions or Branches for support in dealing with hospital questions—

be approved.

Sanatoriums for Tuberculous Workers.—The suggestions and the statement as to sanatoriums for workers suffering from tuberculosis were approved.

Medical Inspection of School Children.—The recommendations in the report on medical inspection of school children and treatment of those found defective, based upon consideration of the replies of Divisions to the report of the Medico-Political Committee issued on December 22nd, 1908 (BRITISH MEDICAL JOURNAL SUPPLEMENT, May 15th, 1909), were approved, on the distinct understanding that school clinics, if established, should be staffed by members of the local profession.

Representation of Local Medical Profession on Hospital Boards.—The proposal that the local medical profession should be represented on the boards of hospitals and similar bodies was approved.

Report of Ophthalmia Neonatorum Committee.—The report of the Ophthalmia Neonatorum Committee was received.

Contributions to Hospitals by Employers and Employees.—The report on contributions to hospitals by employers of labour and employees was discussed at length, and a final decision was postponed until the next meeting.

Earlier Election of Representative.—It was unanimously decided that the Representative of the Division should in future be elected at the November meeting, and the rules were altered accordingly.

Dates for Meetings.—It was unanimously decided that the meetings for the ensuing year should be held at Chepstow on July 9th, 1909, Abergavenny on September 24th, 1909, Newport on November 26th, 1909, Pontypool on February 25th, 1910, and Newport on May 27th, 1910 (annual).

Correspondence.—A circular from the Chelsea and Fulham Division was read.

Vote of Thanks.—A vote of thanks to the Directors of the Newport and Monmouthshire Hospital for their kindness in permitting meetings of the Division to be held in the board room of the hospital was passed unanimously.

CARDIFF DIVISION.

Election of Officers.—The following members have been elected officers for 1909-10: *Chairman*, Dr. POWELL (Barry); *Vice-Chairman*, Dr. TATHAM THOMPSON; *Representatives on Branch Council*, Drs. LEIGH, BRIERLEY, EDWARDS, TREASURE, LYNN THOMAS, and POWELL; *Executive Committee*, Drs. RUSSELL THOMAS, HERBERT COOK, MILWARD, and F. W. S. DAVIES; *Contract Practice Committee*, Drs. REIDY, MILWARD, and LEIGH; *Representative*, Dr. EWEN J. MACLEAN; *Representative on Queen's Nurses Committee*, Dr. ERIC EVANS; *Honorary Secretaries*, Drs. CYRIL LEWIS, 27, Windsor Place, Cardiff, and OWEN L. RHYS, 22, St. Andrew's Crescent, Cardiff.

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH:

HEREFORD DIVISION.

The annual meeting of this Division was held on June 23rd.

Election of Officers.—The following members were elected officers for the ensuing year: *Chairman*, Dr. WILLIAM AINSIE (Kington); *Vice-Chairman*, Dr. J. O. LANE (Hereford); *Honorary Secretary and Treasurer*, Dr. ARTHUR WOOD; *Representative at Representative Meeting*, Dr. ARTHUR WOOD.

To ensure the insertion of notices in this column, they must be received at the Central Offices of the Association not later than the first post on Tuesday.

Association Notices.

ANNUAL GENERAL MEETING.

Notice is hereby given that the 1909 Annual General Meeting of the British Medical Association will be held in the Assembly Hall, Belfast, on Friday, July 23rd, at Twelve noon.

[This Meeting is to comply with Article XII, and will adjourn forthwith until Tuesday, July 27th, at 2.30 o'clock.]

ANNUAL REPRESENTATIVE MEETING.

Also, notice is hereby given that the 1909 Annual Representative Meeting will be held in the Assembly Hall, Belfast, on Friday, July 23rd (and following days as required), immediately after the Annual General Meeting, fixed for Twelve noon, on Friday, July 23rd.

BY ORDER OF THE COUNCIL,

GUY ELLISTON.

May, 1909.

COUNCIL MEETING.

A MEETING of the Council will be held at 2 o'clock in the afternoon of Wednesday, June 30th, in the new Council Room, at 429, Strand, London. W.C.

By Order,

GUY ELLISTON.

June 10th, 1909.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BATH AND BRISTOL BRANCH: BATH DIVISION.—The annual meeting of this Division will be held at the Royal United Hospital on Saturday, June 26th, at 6.0 p.m. Business: (1) To elect officers. (2) To receive annual report. (3) To consider business of Annual Representative Meeting. (4) To consider matters referred to Divisions (see SUPPLEMENT TO BRITISH MEDICAL JOURNAL, May 8th). (5) To modify Divisional Rule No. 7, for ensuring earlier appointment of Representative.—D. LESLIE BEATH, Honorary Secretary.

BIRMINGHAM BRANCH.—The annual meeting of this Branch will be held at the Medical Institute, Edmund Street, on June 17th, at 3.30 p.m. Business: (1) Election of officers. (2) Election of Representatives on Central Council. (3) Annual report of Council and balance sheet. (4) Report of Ethical Committee. (5) Report of Pathological and Clinical Section. (6) The President's Inaugural Address on the "Medical Aspect of the Report of the Poor Law Commission.—ALBERT LUCAS, J. FURNEAUX JORDAN, Honorary Secretaries.

BIRMINGHAM BRANCH: CENTRAL DIVISION.—The annual meeting of this Division will be held at the Medical Institute on Wednesday, June 30th, at 3.30 p.m., at which the election of officers for the ensuing year will be held. Nominations in writing for the offices of Chairman, Vice-Chairman, and two Honorary Secretaries must reach the Honorary Secretaries not later than Wednesday, June 9th.—A. W. NUTBALL, W. TRACY LYDALL, Honorary Secretaries.

BORDER COUNTIES BRANCH.—The annual general meeting of the Branch will be held in the County Hotel, Carlisle, on Friday, June 25th. Business: To receive the report of the council for the past year; to elect the officers of the Branch; and Dr. Murdoch of Annan, will deliver his Presidential

address. Further details of information will be sent to each member by post.—FRANCIS R. HILL, Honorary Secretary, 62, Warwick Road, Carlisle.

CAMBRIDGE AND HUNTINGDON BRANCH.—The annual meeting of the Cambridge and Huntingdon Branch will be held at Cambridge on Tuesday, July 13th, at 12.30.—H. B. KODERICK, Honorary Secretary, Cambridge.

DORSET AND WEST HANTS BRANCH.—The summer meeting of this Branch will be held in Christchurch, Hants, on Wednesday, July 7th. Members wishing to send papers, show cases, exhibit specimens, or propose new members, must communicate with the undersigned not later than Thursday, June 24th.—JAMES DAVISON, Honorary Secretary, "Streathplace," Bournemouth.

EAST ANGLIAN BRANCH.—The annual meeting of the Branch will be held at the Grand Hotel, Clacton-on-Sea, on Thursday, July 8th.—B. H. NICHOLSON, East Lodge, Colchester, Honorary Secretary.

EAST YORK AND NORTH LINCOLN BRANCH.—The annual meeting of this Branch will be held at the Grimsby Hospital on Saturday, June 19th. Further particulars as to the time of meeting and business to be transacted will be published later in the JOURNAL and communicated by circular to each member.—EDWARD TURTON, M.D., Honorary Secretary, 1, Albion Street, Hull.

EDINBURGH AND FIFE BRANCHES.—The attention of members of these two Branches is drawn to the fact that nominations for election to the members upon the Central Council of the Association should be sent in to one of the Secretaries not later than June 15th.—A. LOGAN TURNER, 27, Walker Street, Edinburgh; FRANCIS D. BOYD, 22, Manor Place, Edinburgh; BALFOUR GRAHAM, Leven, Fife.

FIFE BRANCH.—The seventh annual meeting will be held in the Hotel, Thornton, on Thursday, June 17th, at 3 p.m.—R. BALFOUR GRAHAM, Honorary Secretary, Leven.

LANCASHIRE AND CHESHIRE BRANCH.—The annual meeting of the Branch will be held at Chester on Wednesday, June 16th. Members desiring to make scientific, clinical, or other communications will please communicate at once with the Branch Secretary, F. CHARLES LARKIN, 54, Rodney Street, Liverpool.

LANCASHIRE AND CHESHIRE BRANCH.—Science Committee.—Gentlemen who would be willing to give addresses, demonstrations, etc., at Division meetings during the course of next winter will oblige by sending their names and the title of the subjects they propose to deal with as soon as possible to F. CHARLES LARKIN, Branch Secretary, 54, Rodney Street, Liverpool.

LANCASHIRE AND CHESHIRE BRANCH: ALTRINCHAM DIVISION.—*Clinical and Scientific Meeting.*—A meeting will be held at the Board Room of the Altrincham Hospital at 5 p.m. on Thursday, June 24th. (Afternoon tea 4.30 p.m.) Clinical cases will be shown, and Dr. Rhodes will read a paper on Scarlet Fever, to be followed by a discussion. Dinner at the Brooklands Hotel, 7.30 p.m. Ladies invited. Names must be given to the Honorary Secretary by Monday, June 21st.—T. W. H. GARSTANG, Honorary Secretary.

LEINSTER AND SOUTH-EAST OF IRELAND BRANCHES.—Nominations for Central Council.—Nominations of candidates for the two seats on the Council of the Association should be sent to the undersigned on or before June 21st.—ARTHUR H. WHITE, Malvern, Terenure Road, Dublin.

MIDLAND BRANCH: BOSTON AND SPALDING DIVISION.—The annual meeting of this Division will be held on Tuesday, June 22nd, at the White Hart Hotel, Boston, at 12.45 p.m. Luncheon will be provided at 2 p.m.; tickets, 3s. 6d. each (exclusive of wine). Members are requested to reply not later than June 19th if they intend to be present at the luncheon, as those members accepting will be held responsible for the value of their tickets. Members may bring guests to the luncheon. Agenda: (1) Election of officers, including the President-elect of the Branch. (2) Programme for the year. (3) Matters referred to Divisions: (a) Treatment of school children; (b) unqualified practice. (4) Annual report. (5) Motor meet. (6) Invitation to Midland Branch to meet in the Division. (7) Any other business.—A. E. WILSON, Honorary Secretary, Boston.

NORTH OF ENGLAND BRANCH: NORTH NORTHUMBERLAND DIVISION.—The annual meeting will be held at the Plough Hotel, Alnwick, on Thursday, June 24th, at 3.30 p.m. Business: (1) Election of officers. (2) Midwives question. (3) Any other business.—C. CLARK BYRMAN, Honorary Secretary.

NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCH.—The annual meeting will be held on Wednesday, June 30th, at the Grand Hotel, Morecambe, at 3.30 p.m. Members willing to show cases or specimens are requested to communicate with A. S. BARLING, Honorary Secretary, Lancaster.

SOUTH-EASTERN BRANCH.—The sixty-fifth annual meeting of the Branch will be held in the Town Hall, Croydon, on Wednesday, June 23rd, at 2.15 p.m. Dr. J. J. Macan (President-elect) kindly invites members to lunch at the Greyhound Hotel from 1 to 2 p.m. Agenda: In addition to the business of an ordinary meeting: (1) To receive the report of the election of new officers, who shall thereupon take office. (2) To receive the report of the Council on the affairs of the Branch and the annual financial statement. After the meeting members are invited by Dr. Pasmore to a garden party at the Mental Hospital, Warringtonham. The dinner will be held at the Greyhound Hotel at 6.15 p.m., charge 5s. Wine will be provided by the local members. Those who propose to be present at lunch, the garden party, or dinner, are requested to signify their intention to Dr. E. H. Willock, 91, London Road, Croydon, not later than Saturday, June 19th.—H. M. STEWART, Honorary Secretary.

SOUTH-EASTERN BRANCH: CHICHESTER AND WORTHING DIVISION.—The annual meeting of this Division will be held at the Pier Hotel, Bognor, on Friday, June 18th, at 3.30 p.m. Mr. W. S. Sampson, Chairman of the Division, will preside. Agenda: (1) Minutes of the last meeting. (2) To appoint the place of next meeting. (3) Election of officers: Chairman, Vice-Chairman, Secretary, Representative on Branch Council, Representative at Representative Meeting, and Members of the Executive Committee. (4) Report of the Honorary Secretary. (5) Report of Representative. (6) Matters referred to the Division: (a) Report of Ophthalmia Neonatorum Committee; (b) unqualified practice; (c) report on the medical inspection of children and treatment of those found defective; (d) representation of local medical profession on boards of hospitals and similar bodies; (e) medical certificates of suitability for hospital treatment. (7) Dr. Last (Littlehampton) will show some cases.—H. C. L. MORRIS, Honorary Secretary, Bognor.

SOUTH-EASTERN BRANCH: MAIDSTONE DIVISION.—The next meeting of this Division will take place on Thursday, June 17th, for the purpose of electing officers for the ensuing year. It has been proposed to have a dinner afterwards. The Honorary Secretary would feel greatly obliged if each member would kindly intimate his intention of being present or not as early as possible.—GEORGE POTTS, Honorary Secretary.

SOUTH MIDLAND BRANCH.—The annual meeting of this Branch will be held at the General Hospital, Northampton, on Friday, June 18th, at 2.30 p.m., under the presidency of Dr. Alfred Linnell of Paulerspury. The President invites the members to lunch with him at Franklin's Restaurant, Guildhall Road, Nottingham, at 1.30 p.m. All members who accept this invitation must please inform the Secretary not later than Wednesday, June 16th. Agenda: Minutes. Letters and communications. New members elected by Branch Council. President's address. Address by Mr. Jonathan Hutchinson, F.R.C.S., Surgeon to the London Hospital, entitled, *The Surgery of the Tongue*. Dr. Larking of Buckingham will read a paper, entitled, *The Aims of our Association, based on his experience as member of Council, etc.* The Secretary will be pleased to hear from any members who wish to read papers or show specimens. A meeting of the Branch Council will be held at Franklin's Restaurant, Guildhall Road, Northampton, at 1 p.m., on Friday, June 18th (immediately previous to the annual meeting), under the presidency of Dr. Wickham.—E. HARRIES-JONES, Honorary Secretary, 16, Castilian Street, Northampton.

SOUTH MIDLAND BRANCH: BUCKINGHAMSHIRE DIVISION.—The annual meeting will take place on Tuesday, June 15th, at the Royal Bucks Hospital, Aylesbury, at 3.30 p.m.—Agenda: (1) Election of officers: (a) Representatives on Branch Council; (b) Executive Committee; (c) Ethical Committee; (d) Representative to Annual Meeting and Deputy. (2) Receive Annual Report of Committee. (3) Instruct Representative to Annual Meeting: *Re Amputated Hospital dispute; re title of "General Secretary"; re treatment of defective school children; re public medical services; re should all M.O.H.'s be whole-time officers?* (4) Any other business. The following resolution will be moved: "That the Committee take steps to secure that every medical man in the area of the Division give an undertaking to accept no new club or contract work at a lower sum than that fixed as a minimum by the Association in the report on contract practice, namely, 5s. per adult member. Also to endeavour to secure united action in cases where the present club fees are lower than this amount and to report to the Division. Dr. Lauriston Shaw, Physician to Guy's Hospital, will open a discussion on "Dilatation of the Stomach and the Use and Abuse of the 'Emergency Exit.'" Tea will be ready punctually at 3.30 p.m.—ARTHUR E. LARKING, Honorary Secretary.

STAFFORDSHIRE BRANCH.—The thirty-sixth annual meeting of the Branch will be held at the White Hart Hotel, Burton-on-Trent, on Thursday, June 24th, at 4 p.m., when an address will be delivered by the President-elect, W. G. Lowe, M.D. Agenda: (1) Minutes of the last annual meeting. (2) Introduction of the new President. (3) Correspondence. (4) Address by the President. (5) Report of the Council. (6) The financial statement. (7) Election of officers for the ensuing year—President-elect, Secretary, and Treasurer. (8) To decide the place of holding the next annual meeting. (9) Report on the election of the Representative of the Branch on the Council of the Association. Members have the privilege of introducing friends. Dinner at 6 p.m.; charge, 5s. The first general meeting of the session will be held at Stoke, on Thursday, November 25th. Members desiring to read papers are requested to communicate the titles to the General Secretary as soon as possible.—G. PETGRAVE JOHNSON, Honorary General Secretary, Stoke-on-Trent.

YORKSHIRE BRANCH.—Nominations for the election of Representative members of the Central Council (two), each signed by at least three members, must be forwarded to me not later than June 15th. The present Representatives are Drs. Goyder and Sinclair White.—ADOLPH BRONNER, Honorary Secretary, 33, Manor Row, Bradford.

YORKSHIRE BRANCH.—The annual meeting of the Branch will be held at the Grand Hotel, Scarborough, on Saturday, June 26th.—ADOLPH BRONNER, Honorary Secretary, 33, Manor Row, Bradford.

METROPOLITAN COUNTIES BRANCH.

CENTRAL COUNCIL ELECTION, 1909.

We have received the following letter for publication:

London, June, 1909.

TO THE MEMBERS OF THE BRANCH.

Ladies and Gentlemen,—As Candidates at the forthcoming Election to the Central Council we desire to ask for the support of our colleagues in the Metropolitan Counties Branch. Finding ourselves in agreement upon many points in the policy of the Association, we think it may be convenient to the electors if we indicate in a joint letter the directions in which, working together, we should endeavour to influence the Council in promoting the interests of the profession.

The Future of the Association.

We have no doubt as to the absolute necessity of such an Association as ours gradually enrolling a higher and higher proportion of the members of the profession, and steadily increasing its influence and power, in order to secure for the medical profession an opportunity of fulfilling its beneficent functions without undue interference by the State, and on conditions which are fair, both as to conditions of work and remuneration as between the public and ourselves.

The Charter.

We believe that the Charter for which application is now being made will, if obtained, facilitate the work of the Association in forwarding the best interests of the public and the profession. We recognize that the Charter has its present form because it is in accordance with the wishes of the majority of the Association expressed in the manner provided for by our laws and regulations. While regretting that unanimity is not possible in such a complicated matter, we deprecate any opposition to the terms of the Charter during its consideration by the Privy Council, especially in view of the fact that the Association can at any subsequent period secure such alterations as may appear to it to be expedient. Our view of this question, so all-important to the welfare of the Association, was supported by an overwhelming majority at a special meeting of the Branch on December 31st, 1908.

The Existing Constitution.

We recognize in the existing constitution, should the granting of the Charter be delayed, a very valuable means of discovering the wishes of the majority of the profession, and of exerting pressure where necessary upon outside bodies in order to secure that these wishes shall prevail. In our work upon the Council we shall loyally uphold the position laid down in the Articles and the By-laws that the Representative Meeting is the body especially constituted to give expression to the desires of the Association on broad questions of policy.

The Work of Next Session.

The work immediately before the Association is of a very exacting character. The questions of medical inspection and medical treatment of Elementary School children; the reform of the Poor Law Medical Service; the Medical Act Amendments Bill; the administration of the Midwives Act; and the reform of Coroners' Law are all pressing for settlement. In handling each of these questions the utmost care will have to be exercised to safeguard the legitimate interests of the profession, whilst securing that the best possible service shall be provided for the public.

Hospital Reform remains one of the most serious problems before the profession, and assumes ever greater importance as developments take place in other forms of medical service.

The records of the last six years' work show that the Association has through its Divisions and Branches, its Representative Meeting, its Council, and, above all, its Committees, secured for the public and profession useful reforms, and has upheld the standard of Medical science and practice. We seek election to the Central Council in the wish to help in forwarding this National Service.

We are, yours faithfully,

J. FORD ANDERSON,
G. E. HASLIP,
VICTOR HORSLEY,
HUGH R. KER,
LAURISTON E. SHAW.

MEDICAL INSPECTION OF SCHOOLS.

The following letter has been sent to all the members of the staffs of hospitals in London likely to be affected by the proposals of the Education Committee of the London County Council to which reference is made:

May 21st, 1909.

Dear Sir or Madam,—

The Council of the Metropolitan Counties Branch of the British Medical Association invites your consideration of the following points in respect of the recent proposal of the Education Committee of the London County Council to use the voluntary hospital charities of the metropolis as part of a State medical service, and request your co-operation in opposing the course which has, unfortunately, been provisionally adopted by the County Council.

It has been found by a composite Subcommittee of the London County Council Education Committee that on medical inspection of the elementary schools an enormous number of children are defective, and it follows that in the prevention of national physical deterioration provision must be made for the treatment of the more obvious deficiencies and disease conditions—that is, of the eye, ears and throat, teeth, etc.

The British Medical Association has consistently held the view that if the State assumes the responsibility of the school child's health it must, in the first instance, refer the child found defective to its private medical practitioner.

The Metropolitan Counties Branch Council has so far succeeded in supporting this principle that, on their request, the Education Committee of the County Council have embodied it on a treatment reference card issued by them, and removed therefrom a sentence advising the parent to take the child to a hospital.

In the large number of cases where the parent is too poor to pay a private practitioner, and is unwilling to pass under the existing Poor Law system, the responsibility for provision of a properly remunerated medical service rests upon the State, and cannot be evaded by reference of the children to charitable institutions. The reports of the Medico-Political Committee of the Association, giving in full detail the methods by which the statutory authorities can carry out this duty, are summarized in the last Report, published in the SUPPLEMENT of the BRITISH MEDICAL JOURNAL, May 15th, 1909, and it is not necessary at this moment to repeat the discussion on such alternative schemes, the immediate points for consideration being the serious proposal that the State—that is, Education Committee (London County Council) should take advantage of

the voluntary hospital charities and the services of their honorary Staff in the out-patient and other departments.

In the opinion of the Branch Council this proposal really involves a large increase of the unpaid work already done for the community by the medical profession, and a diversion of the funds, premises and materials of the charitable institutions from the purposes for which they were given by the benevolent, and for which the medical profession have contributed in charity, their services, and their time.

The Association has long accepted the principle that the out-patient departments should be consultative institutions, and until the hospitals are municipalized as part of a State Medical Service, the Branch Council considers that the State has no right to claim for a nominal payment to the Administrative Committee, the advantages of charity and the gratuitous services of the medical staffs. Neither can it be admitted that the proposed capitation grant in any way alters the position or principles, as capitation grants for inspection or treatment have, on inquiry, been found by the Medico-Political Committee of the Association to be undesirable, and the attempt to allot such in hospital work would be obviously impossible.

In the absence of the proper appointment of School Medical Officers the Branch Council (in view of the foregoing considerations) is of opinion that the members of the Staffs of the hospitals in London should unanimously oppose the project of the County Council.

In conclusion, the Branch Council also considers the County Council proposal to be contrary to the public interest in that it disregards the evidence published in the Report of the County Council Subcommittee (see BRITISH MEDICAL JOURNAL, January 9th, 1909, with map). That evidence shows that the hospitals and charitable institutions are in the main situated at considerable distances from the centres of the child population of the Metropolis, that the difficulties of transport are so great that nothing but a properly organized local medical service will meet the requirements, and that the hospitals are not competent with their present establishment to deal with the number of children needing attention.

The Metropolitan Branch Council, therefore, trusts that in the interest of the public, the efficiency of the school medical service and the interests of all branches of the profession, you will co-operate in resisting the proposal of the Education Committee of the London County Council.

We have the honour to remain,

Yours faithfully,

VICTOR HORSLEY,
President of the Metropolitan Counties Branch.
ATWOOD THORNE,
E. W. GOOBALL,
Hon. Secretaries, Metropolitan Counties Branch.

SCHOOL CARE COMMITTEES.

The following resolutions were unanimously passed at the meeting of the Council of the Metropolitan Counties Branch on May 27th, 1909:

1. That the Council of the Metropolitan Counties Branch of the British Medical Association, representing over 2,700 registered members of the medical profession resident in, and for the most part practising in, London, would respectfully urge on the London County Council, and also on all boards of managers of elementary schools in London, that, in view of the questions of physical welfare which will be undertaken by the School Care Committees and the local associations of Care Committees about to be formed, it is desirable to include in the membership of each of those committees one or more registered medical practitioners.
2. That a copy of the preceding resolution be sent to the following—namely, (1) the chief officials of the Education Department of the London County Council; (2) the Honorary Secretaries of Divisions of the Metropolitan Counties Branch of the British Medical Association; (3) the divisional correspondents of the London County Council; (4) the honorary correspondents of non-provided Church schools; (5) the clerks of all borough councils in London, with an appropriate covering letter in each case; also to (5) the *Lancet* and *BRITISH MEDICAL JOURNAL*, and any other suitable medical or nursing journal.

LANCASHIRE AND CHESHIRE BRANCH:

CENTRAL COUNCIL ELECTION.

The following is the report of the scrutineers as to the results of the Central Council election:

	Votes.
Larkin, F. C.	689
Garstang, T. W. H.	655
Machie, Chas.	598
Taylor, J. H.	538
Bradshaw, T. R.	326

(The first four are elected.)

Division.	Membership.	Votes Pollcd.	Percentage.

28. Stockport, Macclesfield, and East Cheshire	73	24	32.8
29. Warrington	27	17	62.9
30. Wigan	35	22	61.1

Total votes polled, 738. Branch membership, 1,628.
Percentage polled, 48.4.

The above includes all the papers received. The analysis will not be found to correspond, because several papers were unsigned, and consequently could not be allotted to Divisions.

(Signed) HERBERT ARMSTRONG,

Scrutineers.

June 1st.

[This report was received on the afternoon of Thursday, June 3rd, after the SUPPLEMENT of last week had gone to press.]

SIR.—May we ask for space in the JOURNAL to thank our supporters for returning us as their Representatives on the Central Council?

We have for the second year fought the election on a definite policy in Association matters, which we have done our best to explain fully to every elector.

The following is the substance of our address:

Our Policy and United Aims.

Our policy is that of progress along constitutional lines. We are attempting to make the Association an active bond of scientific, social, and political union between medical men, a means whereby the profession may offer an organized resistance to all encroachments on its rights, and may attain a position more in harmony with its importance to the community.

The Charter.

We firmly believe that should the Charter be obtained it will be of immense benefit to the profession. We recognize that though it was finally adopted by the Representative Meeting by a vote of 106 to 1, it may still contain some clauses with which a minority will disagree, but we deprecate in the highest degree the action of the party we oppose, which though repeatedly defeated by large majorities, both in the Representative Meeting and in the Council, is trying to over-ride the majority, and carrying its opposition to the Charter before the Privy Council, and so not only putting the Association to great expense, but doing all in its power to cause the rejection of the Charter, and to frustrate several years' work of the Association. We ask you to show your disapproval of this disloyal and unconstitutional procedure by returning us by a large majority.

The Present Constitution.

We are upholders of the present constitution as long as it is in force, and of government of the Association by the majority of those who vote in a constitutional manner. We have therefore no sympathy with those who are forever trying to thwart decisions of the Association on the assumption that members who do not vote are on their side.

The Representative Meeting.

We hold that for the good government of the Association there must be one, and only one, final authority in all matters of policy and finance, and we recognize that Article 35 of our constitution makes the Representative Meeting that authority.

The Council.

We further recognize that Article 39 makes the Council the Executive of the Association, and as such we have successfully used our influence to strengthen its hands. But we oppose those who would induce the Council to take up an unconstitutional position of rivalry and opposition to the Representative Meeting.

Organization.

We are strong supporters of the Divisional organization, but admit that there are many ways in which it might be improved. We consider that each Division should be a complete local medical society, and to that end we have supported the Science Committee in its scheme to put the Central Library of the Association at the disposal of the Divisions, and to encourage the formation of local libraries, as well as to improve the organization of Divisions and Branches for scientific purposes.

We consider the Branch organization important for co-ordinating the work of Divisions, and we have all taken an active part in perfecting our local Branch organization.

Medical Politics.

We have taken an active interest in all current medical politics. Last year we specially mentioned in our address the Midwives Act, and we are pleased to report that one of us (Dr. Taylor), owing to his intimate knowledge of the subject, was selected to represent the Association, and has recently given evidence on behalf of the profession before the

Government Departmental Committee now sitting. We still consider Hospital Reform and Contract Practice two of the most important questions, and we have constantly kept them in the foreground, endeavouring to promote that union between all members of the profession without which nothing really effective can be done.

Such is our policy, and if it recommends itself to you, we ask you to return us all four to the Central Council, as our election will ensure that there will be none of that cross-voting which on many important occasions in the past has virtually disfranchised the Branch.

These views have been supported by personal visits to more than half the Divisions. The majority of votes in our favour is so decisive that we claim it as a proof of loyal support of the constitution of the Association (and disapproval of the internal dissension recently fostered by a minority) on the part of the general body of members when fully acquainted with the facts, and as such we think it may be of interest to members of other Branches also.—We are, etc.,

F. C. LARKIN,
T. W. H. GARSTANG,
C. MACFEE,
J. H. TAYLOR.

GENERAL MEDICAL COUNCIL.

EXECUTIVE COMMITTEE.

A MEETING of the Committee was held on Wednesday, May 26th. Sir DONALD MACALISTER, President, was in the chair, and Sir Hugh Beever, Mr. Tomes, Sir John Tuke, Dr. McVail, Sir John Moore, and Sir Charles Ball were present.

Medical Laws of the United States.

THE PRESIDENT laid on the table an abstract which had been prepared of the laws regulating the practice of medicine in the United States, based upon information furnished through the Privy Council, and it was resolved:

That this abstract be substituted for the existing *prices* on the subject in the appendix to the second report of the Unqualified Practice Prevention Committee, and that the completed pamphlet be placed on the list of the Council's publications.

Draft Charter, British Medical Association.

The Committee considered the Draft Charter of the British Medical Association. The LEGAL ASSESSOR, who as requested by the Executive Committee, had examined the Draft Charter, offered criticisms, and expressed his opinion regarding certain of its features. The Committee drew up a report and directed that it should be presented to the General Council *in camera*.

HYGIENE AND TEMPERANCE IN ELEMENTARY SCHOOLS.

THE Board of Education will issue this week a syllabus of lessons on temperance for scholars attending public elementary schools. The syllabus is preceded by a prefatory note signed by Sir Robert Morant, and this note and the syllabus are reproduced below. Appended to the syllabus are a number of notes for the use of teachers, which it has not been deemed necessary to reproduce here.

It will be interesting to members of the British Medical Association to be reminded that the Central Council on January 20th, 1904, adopted the following resolution, afterwards approved by the Representative Meeting, in support of the movement of public opinion—then in an early stage—with regard to the prevention of national physical deterioration.

It is of urgent importance that elementary scientific instruction in health subjects, including temperance, should be provided in all the primary schools by the educational authorities in order that the condition which leads to deterioration of national physique may be understood, and as far as possible prevented.

This resolution was presented by Dr. T. D. Griffiths, then President of the British Medical Association, to Lord Londonderry, at that time President of the Board of Education, at the deputation on July 11th, 1904, when the petition of the members of the medical profession urging the importance of the teaching of hygiene and temperance was also presented. That petition was signed by 14,718 registered medical practitioners, and asked the Board to consider whether it would not be possible to include in the curricula of the public elementary schools, and to encourage in the secondary schools such teaching as might, without developing any tendency to dwelling on what is unwholesome, lead all the children to appreciate at their true value healthful bodily conditions as regards cleanliness, pure air, food, drink, etc. The President of the Board of Education, in his reply to the deputation, said that the Board considered it advisable that the students at training colleges should have knowledge of school hygiene, personal hygiene, and of the physiological principles upon which their rules were based, and was able to state that a reference to the matter had been introduced into the code of regulations for public elementary schools for 1904 to the effect that the school should afford the children "every opportunity for the healthy development of their bodies, not only by training them in appropriate physical exercises and encouraging them in organized games, but also by instructing them in the working of some of the simpler laws of health." He also said that the Board was about officially to express the opinion that a course of instruction in hygiene should form part of the work for the two upper classes of every girls' school.

Comparing that attitude with the attitude expressed in the prefatory note published below, it will be seen that very remarkable progress has been made, and that the teachers, whether members of the regular staff of schools or supplied by special organizations, are now provided with a definite syllabus which they will be required to follow.

SYLLABUS OF LESSONS ON "TEMPERANCE" FOR SCHOLARS ATTENDING PUBLIC ELEMENTARY SCHOOLS.

PREFATORY NOTE.

1. It is hoped that in course of time such instruction on the subject of "Temperance," in its restricted sense, as is suitable to Public Elementary Schools will be given by the regular Staff as part of the teaching of the elementary rules of personal health which should be included in the curriculum of every school. Article 2 (9) of the Code for 1908 indicates that such instruction should be given wherever possible, and Hygiene (which, of course, comprehends instruction relating to alcoholic drinks) is now included as one of the regular subjects for Two Year Students in Training Colleges (Article 15 (v) of the Regulations for the Training of Teachers for Elementary Schools).

2. At present, however, some Schools have on their staff no teachers who have the special knowledge required for giving teaching of this kind, and in order that the scholars may receive instruction in "Temperance," the services of special peripatetic teachers have been offered by various Societies and Organizations, and have in many cases been accepted by Local Education Authorities and Managers of Schools. Such instruction has been allowed to count towards the period of secular instruction required by the Code. These extraneous teachers, however competent they may be, have not always the particular qualifications required by the Code, nor the experience of the methods of teaching suitable to scholars in Public Elementary Schools, which are possessed by the regular teachers on the staff of the schools. Further, the syllabuses of "Temperance" lectures to be given by extraneous teachers which have been submitted for the Board's approval have been very various, and in some cases have not been specially designed for the instruction of scholars in Public Elementary Schools, nor have they always been appropriate to that purpose. In these circumstances the Board have come to the conclusion that the time has come for the issue of an official Syllabus to which all instruction in "Temperance" (whether given by extraneous teachers or by teachers on the ordinary staff) should conform in general character and, to some extent, in detail. The Board believe this course to be essential in order to provide security that the teaching given on this difficult matter shall be both

accurate in its statement of facts, and suitable in its manner of presentation to scholars in Public Elementary Schools.

3. The following Syllabus has accordingly been framed as a "Model" Syllabus for use by teachers in Public Elementary Schools, whether they are or are not members of the School Staff, and the Board of Education will not in ordinary circumstances be prepared to approve under Article 3 of the Code any Syllabus of instruction which departs substantially from this Model. It is suggested that at least three lessons in the subject should be given to the children each year. It is, however, desirable to arrange, so far as may be possible, that if any part of the instruction is given to children who are under 10 years of age, it should be only that which is of the broadest and most general character, and that lessons on the matter of the Third Section should only be given to children who are over 12 years of age. Where three lessons cannot be given, the teacher may be able to cover the ground in rather less detail in two lessons, and where one lesson only is given, it is preferable that the matter in Section III of the Syllabus should be very lightly touched, the main attention being concentrated on Sections I and II. Where the lessons are given at distant intervals, as will sometimes be the case, it is clearly desirable to begin the later lessons by a brief recapitulation of those which have preceded. There is an obvious advantage in securing that a series of three lessons is given to the children within a comparatively short period. Lessons on this subject need not necessarily be grouped under a separate head in the curriculum, but can appropriately be included in instruction on Hygiene, of which, indeed, they form a part.

It will be observed that the principle of the Syllabus is to proceed, as far as possible, by means of question and answer, from what the child already knows to what it does not know. By this means the child is brought to express what it has already experienced, and is led on, by amplification and illustration, to realize what is most conducive to a healthy life. Technical terms and language which a child would not understand have been avoided as far as practicable, and it is of the highest importance that in using the Syllabus the teacher should be careful to employ only the simplest language.

4. Some Notes for the guidance of teachers have been appended which elaborate the necessarily condensed statements of the Syllabus, and indicate under each heading the line which should be taken and the material which can be safely used in enforcing or illustrating the several points. It is not, of course, intended that these Notes should ever be read to the class or used in such a way as to overload the teaching with detail. It may be taken that the statements of fact made both in the Syllabus and in the Notes have been carefully verified, and that the inferences drawn from the facts are supported by scientific opinion of high authority.

5. It has been alleged that some of the "Temperance" teaching given in the past which was represented as "scientific" has, in fact, fallen short of a scientific standard as regards accuracy in stating facts, caution in drawing inferences, or methods of instruction. Indeed in some cases it appears that attempts have been made to support the incontrovertible general arguments against the abuse of stimulants by suggesting that alcohol inevitably and invariably has deleterious consequences when taken as a beverage in any conditions whatever. The supposed proof of this proposition, sometimes included in lectures on "Temperance" given in Public Elementary Schools, occupied time that might have been better employed for the purpose of inculcating "Temperance" on broad intelligible grounds, and as a scientific argument rested on somewhat precarious foundations.

6. The teacher will know that a temperate life depends mainly on good habits and the appreciation and practice of a few simple and direct rules of health and conduct, and is therefore largely a matter of good training. There are open to the teachers on the Staff of the School frequent opportunities, apart from the regular lessons, of impressing upon the scholars the importance of habits of self-control. It should be the object of any special instruction in "Temperance," as in other departments of Hygiene, to supply in a simple intelligible form the broad truths of the subject and plain reasons for the good habits which it should be the constant aim of the School life, no less than of the Home life, to develop in the scholars.

7. "Temperance" teaching in Public Elementary Schools should therefore aim mainly at impressing upon the scholars the manifest advantages of abstinence, and the absence of advantage in, and the positive risks and dangers of, any departure from it. The advice or injunctions given

should be based upon the broad facts of common experience, such as children can readily understand, and upon the conclusions of trained observers (e.g., as to the extent to which the power to do mental and physical work is affected by the consumption of alcohol in its ordinary forms), rather than upon the results of laboratory experiments or pathological studies. The latter may be valuable in the teaching of advanced students of Hygiene, but can have little, if any, real meaning for children. The teacher should carefully avoid anything, whether in the details or in the methods of dealing with them, calculated to excite morbid curiosity or fear. Instruction on the subject of "Temperance" should itself be temperate and should make a sober appeal to such reasoning capacity as a child possesses and to the ideas of decent, self-respecting, and dutiful living which every good teacher endeavours to present to and cultivate in the children under his charge.

ROBERT L. MORANT.

June 1st, 1909.

SYLLABUS.

SECTION I.

EATING AND DRINKING: FOOD AND ITS USE

1. What things do we eat?
2. The different kinds of food.
Meats, fats, starches, sugars, salts. Water in food.
3. What is the use of our food? Why food is necessary.
 - (a) Food is necessary for the growth of the body.
 - (b) Food prevents the body from becoming thin and wearing away. It repairs waste.
 - (c) It is from food that we get our strength and power to work.
 - (d) It is by our food that the body is kept warm.
 - (e) The working of the mind depends upon the condition of the body. If the body is not properly fed the mind will not work so well.
4. Overfeeding and underfeeding. Too little food is bad for the body; too much food is bad also.
5. The special usefulness of the different kinds of food. Why people eat various kinds of food, and why they are wise to do so.
6. Things which people eat and drink for pleasure. Sweets, cakes, tea, coffee, and cocoa. Some of these things are foods or quench thirst. The value of each. Why people drink tea and coffee.
7. Other beverages.

Besides these beverages, which are in part useful, people also take for pleasure other beverages, such as beer, wine, spirits. These are not useful in the ways in which our ordinary food, and such things as cocoa and milk, are useful. People often do themselves great harm by taking too much beer, wine, and spirits.

The chief reason for this is that these beverages contain Alcohol and little or no real food-substance.

Children and young people ought never to take alcoholic beverages in any circumstances, unless by a doctor's express order.

SECTION II.

ALCOHOL.—EFFECTS OF ALCOHOLIC BEVERAGES ON THE BODY.

1. The presence of Alcohol in beer, wine, and spirits.
Not only are beer, wine, and spirits not useful to us in the same way that our ordinary food is useful; they also contain varying proportions of alcohol, which in pure form is injurious to the human body.
2. Some characteristics and uses of pure Alcohol.
3. The proportion of Alcohol in beer, wine, and spirits.
It is impossible to drink alcohol undiluted, because of the direct injury and pain it would produce.
The harmful effects of alcohol are weakened, though not destroyed, when it is mixed with water and other things, as in alcoholic beverages.
4. The drinking of alcoholic beverages may bring about injurious effects and changes in our bodies, which may be considered under the following headings:—

The effect of Alcohol on:

- (a) Growth.
 - (b) The power of the body to resist disease.
 - (c) The body's strength and power to work.
 - (d) The proper digestion of food.
 - (e) The heat of the body.
 - (f) The control of the body which is exercised by the brain.
 - (g) The intelligence and understanding.
5. The effects of excessive drinking of Alcohol:
 - (a) The man or woman who habitually drinks too much alcohol may become a mental or physical wreck.
 - (b) Persons who drink in excess do not, as a rule, have long or healthy lives. The evidence of this.

SECTION III.
EVIL CONSEQUENCES OF INTEMPERANCE
TO THE INDIVIDUAL,
TO THE HOME, AND TO THE STATE.

(For Children over 12 only.)

1. The drinking of alcoholic beverages not only may have bad effects upon the body and mind of the individual, but also may be followed by still more serious consequences—namely, moral injury to himself and great harm to others.
2. The importance of self-control and temperance in all things.
Freedom is lost if evil habits are acquired.
3. The personal consequences of excessive drinking of alcohol:
 - (a) Waste of money which could be wisely spent or saved. The value of thrift.
 - (b) Loss of self-respect.
 - (c) Unfitness for work; loss of employment. Pauperism.
 - (d) Ill-health; disease. Insanity.
 - (e) Neglect of duty; moral degradation. Crime.
 - (f) The ruin of homes; unhappiness and suffering of men, women, and children.
4. The social evils which result from alcoholic excess.

The habit of alcoholic excess affects not only the individual and his family, but also the State, that is, the whole of the people. There is wasteful expenditure of money; and paupers, lunatics, and criminals are a heavy burden on the public. The working powers of the people as a whole are impaired, and so the prosperity of the nation itself is undermined.

MILK AND DAIRIES BILLS FOR SCOTLAND.

IMMEDIATELY before the commencement of the Whitsuntide recess a bill was introduced into the House of Lords by the Secretary for Scotland, entitled the Milk and Dairies (Scotland) Bill, and another bill, entitled the Milk Control (Scotland) Bill into the House of Commons by Mr. Watt, but copies of the bills were not obtainable until after the adjournment.

MILK AND DAIRIES (SCOTLAND) BILL.

The Government bill introduced into the House of Lords on May 24th is a bill to ensure the purity of milk supplies and to regulate dairies in Scotland, and for other purposes connected therewith.

Definition of "Dairy" and "Dairyman."

The word "dairy" is defined to include any creamery, farm, farmhouse, cowshed, byre, milk store, milk shop, or other premises from which milk is supplied or in which it is stored or kept for purposes of sale, or which are used for the making of butter or cheese; and "dairyman" is defined as any cowkeeper, purveyor of milk, occupier of a dairy, or maker of butter or cheese.

Licensing of Dairies.

The bill requires that premises in which the business of dairyman is carried on shall be licensed by the local authority after a report made by the medical officer of health or other authorized officer or person. The licence will be renewable annually. If a licence or its renewal be refused by the local authority or only granted provisionally, there will be a right of summary appeal to the sheriff. The cart, van, or other vehicle in which a person sells milk supplied from without the district will be deemed premises within the meaning of the bill. The local authority will be required to keep a register of licensed dairies, and any person carrying on the business of dairyman without a licence will be guilty of an offence.

Inspection and Prohibition of Sale.

Every local authority may, and when required by the Local Government Board for Scotland shall, appoint a member of the Royal College of Veterinary Surgeons as veterinary inspector, and the incumbent of this office shall not engage in private practice in any district in which he holds office, save with the consent of the Local Government Board. Two or more authorities may combine in appointing a veterinary inspector. If no veterinary inspector be appointed, the duties of that office shall be laid on a veterinary surgeon approved by the local authority in terms of Section 43 of the Public Health (Scotland) Act, 1897.

The medical officer of health, or other officer authorized by the local authority, will be required to inspect every dairy in the district once a year, and to report to the local

authority, and the veterinary inspector must inspect the cattle in every dairy at least once a year, and report to the local authority.

The local authority will be required to make by-laws for the inspection of cattle, for prescribing and regulating the structure, lighting, ventilation, cleansing, drainage, and water supply of dairies; for securing the health of the cows, and the cleanliness of the person and clothing of those engaged in the business, and of the milk, cows, dairies, and utensils used for the reception, conveyance, storage, or sale of milk; and will also be requested to prescribe precautions to be taken by dairymen against infection or contamination.

If the medical officer of a district has evidence that a person in the district is suffering from infectious disease attributable to milk, or attributable to milk supplied from a dairy in the district, or that the milk from such a dairy is likely to cause disease, he shall examine the dairy and every person engaged in it or resident on the premises, and if accompanied by the veterinary inspector shall examine the animals, and if evidence or suspicion of infectious properties in the milk is discovered, the medical officer shall notify the medical officer of health of the district in which the dairy is situated, and the latter shall be bound as soon as practicable to examine the dairy, and the persons engaged in or about it, and report to the local authority, which shall meet forthwith to consider the report or reports, and decide whether an order requiring the dairyman not to supply milk from the dairy shall be made. Right of appeal to the sheriff is reserved, and if a dairyman sustain damage by reason of the order, and be not himself in default, the local authority making the order will be liable to compensate him. The dairyman will be required on demand by the local authority to produce lists of customers and invoices, and the local authority or its officers will have power to enter and inspect or examine at all reasonable times any dairy, any person employed or residing in any dairy, and the veterinary inspector power to examine any cattle in any dairy.

Tuberculous Milk.

The sale of milk from a cow apparently suffering from tuberculosis, with emaciation, or tuberculosis of the udder, or any sore on the teats accompanied by suppuraction, or from any disease liable to infect or contaminate the milk, or any cow which gives tuberculous milk, will be rendered illegal, and a dairyman will be required to give written notice to the local authority of any such disease among his cows, and shall not keep such cows with healthy animals.

If a person employed in connexion with any dairy, or resident there, or residing in the same house as any person employed, suffer from sore throat or diarrhoea, or from any infectious disease, the dairyman must forthwith report to the medical officer of health of every district to which the milk is consigned information regarding all such cases of infectious disease, and the persons indicated shall not assist in the dairy.

Taking Samples.

The medical officer of health or veterinary inspector will have the right, if required by the medical officer of health of the district to which the milk is consigned, to take samples of milk, and the veterinary inspector may apply the tuberculin or any other reasonable test to any cow in a dairy for the purpose of discovering whether such cow is suffering from tuberculosis, provided that the consent of the owner has previously been obtained.

Defaulting Authorities.

If the local authority fail to perform its duty the Local Government Board will have power to apply to the sheriff by summary petition, and the sheriff may make a decree accordingly, or the Local Government Board may, with the approval of the Lord Advocate, apply to the Court of Session.

If a local authority shall have reason to believe that the provisions of the Act, or of the by-laws made under it, are not carried out in any district to which the milk is consigned, the local authority of the district to which the milk is consigned may apply to the Local Government Board, who will be required to inquire into the circumstances and to take such proceedings as may be necessary.

Orders.

The Board will be authorized to make general or special orders for carrying out the purposes of the bill, including, in particular, (a) measures for cooling milk and otherwise protecting it against infection or contamination; (b) the prohibition or the regulation of the use of preservatives; (c) the manner of conveyance of milk, and the identification of vessels used for conveyance; (d) the prohibition or regulation of the mixing of milk; (e) the labelling of receptacles in which the milk is sold otherwise than in its natural state.

MILK CONTROL (SCOTLAND) ACT.

This bill, introduced by Mr. Watt into the House of Commons, would repeal the Cattle Sheds in Burghs (Scotland) Act, 1866, in so far as it relates to the licensing of premises and places for the keeping of milch cows, and the Dairies, Cowsheds, and Milkshops Orders of 1885, 1887, and 1899, and would require the Local Government Board for Scotland to make regulations as to the structure and sanitary condition of dairies, cleanliness of the milkers and utensils, and the prevention of infection or contamination of the milk. It would require the local authority to inspect all cowsheds, to appoint a veterinary officer of health, to register dairymen, and to license premises, no cow to be kept for the sale of milk in any building not so licensed. The bill would also require the dairyman to give notice of diseased cows, and to give the veterinary officer power to order the separation, isolation, or slaughter of a diseased cow; the dairyman would also be required to notify illness in persons residing at the dairy, or employed in connexion therewith. The local authority would have power to take samples of milk, to enter dairies, and to order milk to be destroyed or sterilized. The importation of milk into Scotland would be forbidden without a permit from the Local Government Board.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

STAFF SURGEON E. D. J. O'MALLEY has been appointed to the *Boadicea*, or commissioning, June 10th; and Staff Surgeon A. B. BEAN, to the *President*, additional, or temporary service in the Medical Department, June 2nd.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

CAPTAIN JAMES M. BICST, M.B., is placed temporarily on the half-pay list, on account of ill-health, June 4th. He was appointed Lieutenant, December 4th, 1899, and made Captain, December 4th, 1902. According to the *Official Quarterly Army List*, he was in the South African war in 1899-1902, was present in operations in the Orange Free State and Cape Colony, and has received the Queen's medal with three clasps and the King's medal with two clasps. Lieutenant A. DAWSON, M.B., who is serving in India, is appointed Specialist in Dermatology, 9th (Secunderabad) Division, with effect from the date of his assuming duties.

INDIAN MEDICAL SERVICE.

LIEUTENANT-COLONEL J. A. BURTON, Madras, has been selected to officiate as Principal Medical Officer, Arid Brigade, with effect from May 25th, vice Colonel W. A. Quayle, M.D., on leave.

TERRITORIAL FORCE.

INFANTRY.

SURGEON-MAJOR AND HONORARY SURGEON-LIEUTENANT-COLONEL T. PENNELL resigns his commission, retaining his rank and uniform, April 20th.

SUPERNUMERARY SURGEON-LIEUTENANT R. W. BRANTHAWE, 15th (County of London) Battalion, the London Regiment (Prince of Wales's Own, Civil Service Rifles), to be Surgeon-Captain, and to be absorbed into the establishment, May 1st.

ROYAL ARMY MEDICAL CORPS.

South Wales Mounted Brigade Field Ambulance.—Captain J. R. I. RAYWOOD to be Major, February 25th.

Second Home Counties Field Ambulance.—GEORGE T. WILLAN to be Lieutenant, April 2nd.

Second Wessex Field Ambulance.—THOMAS P. PREDICOMBE to be Lieutenant, April 27th.

Second London Sanitary Company.—ARTHUR J. MARTIN to be Lieutenant, April 26th.

First London (City of London) Field Ambulance.—Lieutenant ANDREW ELLIOT, M.D., from the 2nd London (City of London) Field Ambulance, to be Lieutenant, March 4th.

Third South Midland Field Ambulance.—CHARLES CORFIELD to be Lieutenant, March 18th; ALFRED COLERIDGE, M.B., to be Lieutenant, March 23rd.

First Hants Field Ambulance.—Lieutenant T. DONOVAN to be Captain, December 12th, 1908.

First London (City of London) General Hospital.—Officers whose services will be available on mobilization: Captain J. CALVERT, M.D., to be Major, February 20th; Captain W. MCADAM ECCLES, M.B., F.R.C.S. Eng., to be Major, March 15th.

First Northern General Hospital.—The following to be officers whose services will be available on mobilization, dated April 30th: Colonel G. W. RIDLEY, M.B., F.R.C.S. Eng., and A. M. MARTIN, M.B., to be Majors; H. B. ANGUS, M.B., F.R.C.S. Eng., T. BEATTIE, M.D., W. E. HOME, M.B., W. G. RICHARDSON, M.B., F.R.C.S. Eng., J. D. ARNOLD, M.D., J. D. WARDLE, M.B., and R. P. R. LYLE, M.D., to be Captains; J. W. LEECH, M.D., F.R.C.S. Edin., G. G. TURNER, M.B., F.R.C.S. Eng., H. DRUMMOND, M.B., A. PARKIN, M.D., F.R.C.S. Eng., G. HALL, M.D., T. M. ALLISON, M.D., J. C. STEWART, M.B., W. E. M. EDE, M.D., S. S. WILLIS, M.D., D. W. PATTERSON, M.B., T. GOWAN, M.B., H. J. SLADE, M.B., H. H. MARHAM, M.B., W. J. PHILLIPS, M.B., and W. SETMOUR, M.B.

First Eastern General Hospital.—Lieutenant-Colonel JOSEPH GRIFFITHS, M.D., to be Colonel, May 6th, 1908.

London Mounted Brigade Field Ambulance.—The name printed under this head in last week's SUPPLEMENT (p. 569) as "Hugh S. Bradley" should have been HUGH S. BRADLEY.

For Attachment to Units other than Medical Units.—Surgeon-Lieutenant-Colonel and Honorary Surgeon-Colonel DAVID LENOX, M.D., from the 1st (City of Dundee) Volunteer Battalion the Black Watch (Royal Highlanders), to be Lieutenant-Colonel, with the honorary rank of Surgeon-Colonel, with precedence as in the Volunteer Force, April 1st, 1908. Surgeon-Lieutenant-Colonel and Honorary Surgeon-Colonel R. R. BROWN, from the 1st Kent Royal Garrison Artillery (Volunteers), to be Lieutenant-Colonel, with the honorary rank of Surgeon-Colonel, with precedence as in the Volunteer Force, April 1st, 1908. Surgeon-Lieutenant-Colonel and Honorary Surgeon-Colonel W. J. WATKINSON, from the 4th Volunteer Battalion the Royal Fusiliers (City of London Regiment), to be Lieutenant-Colonel, with the honorary rank of Surgeon-Colonel, with precedence as in the Volunteer Force, April 1st, 1908. Surgeon-Lieutenant-Colonel and Honorary Surgeon-Colonel J. B. ROSS, ADC, from the 7th Volunteer Battalion the Royal Scots (Lothian Regiment), to be Lieutenant-Colonel, with the honorary rank of Surgeon-Colonel, with precedence as in the Volunteer Force, April 1st, 1908. Surgeon-Captain A. C. HARTLEY, M.D., from the 1st Bedfordshire Volunteer Battalion (Volunteers), to be Lieutenant-Colonel, with precedence as in the Volunteer Force, April 1st, 1908. Surgeon-Captain G. H. GOLDSMITH, M.D., from the 1st Bedfordshire Royal Engineers (Volunteers), to be Captain, with precedence as in the Volunteer Force, April 1st, 1908. Captain R. EMMETT, to be Major, October 1st, 1909. Captain A. V. GREENWOOD, M.B., resigns his commission, March 22nd. FRANK J. HATHAWAY, M.D. (late Lieutenant United Services College Cadet Corps), to be Lieutenant, with precedence as from April 8th, 1908. April 1st, 1908. Lieutenant-Colonel and Honorary Surgeon-Colonel J. K. ALEXANDER, M.D., relinquishes his commission, under the conditions of paragraph 59, Territorial Force Regulations, and is granted permission to retain his rank and uniform, March 3rd; OWEN J. FARRY-EDWARDS, M.B., to be Lieutenant, April 15th; Lieutenant-Colonel A. D. WESTER, M.D., resigns his commission, retaining his rank and uniform, April 20th; Surgeon-Captain J. B. DIXON, from the Welsh Divisional Engineers, to be Captain, May 6th, 1908.

Unattached List.—Major J. M. ROBERTSON, M.B., from the Scottish Command, Glasgow Companies, Royal Army Medical Corps (Volunteers), is appointed to the Unattached List, with rank and precedence as in the Volunteer Force, dated April 1st, 1908.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 7,115 births and 3,883 deaths were registered during the week ending Saturday last, June 5th. The annual rate of mortality in these towns, which had been 15.7, fell to 14.7, and 13.9 per 1,000 in the three preceding weeks, further declined last week to 12.5 per 1,000. The rates in the several towns ranged from 3.1 in East Ham, 4.0 in Leyton, 5.1 in Wallasey, 5.9 in Handsworth (Staffs.), 7.2 in Gateshead, 7.5 in Reading, and 7.7 in Leicester, to 18.6 in Oldham, 18.9 in Walsall, 19.1 in Stockport, 19.6 in Wolverhampton, 20.1 in Wigan, and 24.0 in Merthyr Tydfil. In London the rate of mortality was 11.6 per 1,000, while it averaged 12.5 in the seventy-five other large towns. The death-rate from the principal infectious diseases averaged 1.1 per 1,000 in the seventy-six towns. In London these diseases caused a death-rate of 1.5 per 1,000, while among the seventy-five other large towns, the rates ranged upwards to 2.9 in Great Yarmouth, 3.0 in Salford, 3.1 in South Shields, 3.4 in Norwich, 3.5 in Wigan, 3.6 in Newcastle, 3.7 in Plymouth, and 5.6 in Tynemouth. Measles caused a death-rate of 1.2 in Aston Manor, 1.3 in King's Norton, 1.5 in West Bromwich, 1.7 in Wigan, 1.8 in South Shields, 2.2 in Salford, 2.3 in Poole, 3.4 in Norwich, and 4.0 in Tynemouth. Whooping-cough of 1.0 in St. Helens, 2.0 in Great Yarmouth, 2.1 in Tynemouth, and of diarrhoea of 2.1 in Walsall. The mortality from diphtheria and from enteric fever showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The number of scarlet fever cases requiring admission for treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 2,173, 2,181, and 2,254 at the end of the three preceding weeks, had fallen again to 2,223 at the end of last week; 275 new cases were admitted during the week, against 315, 348, and 355 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

DURING the week ending Saturday last, June 5th, 999 births and 582 deaths were registered in eight of the principal Scottish towns. The annual rate of mortality in these towns, which had been 16.2, 14.9, and 16.7 per 1,000 in the three preceding weeks, declined again last week to 16.3 per 1,000, but was 4.0 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scottish towns the death-rate ranged from 12.5 in Greenock and 14.0 in Leith, to 19.4 in Dundee and 19.8 in Perth. The death-rate from the principal

and congenital or infantile defect. 3. With regard to causation, alcohol was assigned in 10, or less than 8 per cent., syphilis in 7, critical periods in 25, organic brain disease in 5, moral causes in 22, influenza in 2; and bodily illness in 12. Previous attacks were noted as cause in 8 and a hereditary predisposition ascertained in 9. With reference to bodily ill-health as a cause of insanity, the numbers given above refer only to severe illnesses, and Dr. Oswald says that in few, if any, of the admissions was there a healthy functional condition of all the organs. Many of the disorders seemed in themselves trivial—decayed teeth, indigestion, etc.—but mental improvement almost always followed their removal. During the year 45 were discharged as recovered, giving a recovery-rate on the admissions of 35.3 per cent.; 31 as relieved, and 24 as not improved. Also during the year there were 25 deaths, giving a death-rate on the average numbers resident of 6.0 per cent. The deaths were due in 10 to cerebro-respiratory diseases, including 6 from general paralysis; in 6 to chest diseases, there being none from pulmonary tuberculosis; in 6 to abdominal diseases, with 2 from enteritis, and 3 to general diseases. The asylum, which will in future be known as the Glasgow Royal Mental Hospital, continues its good work of taking many patients at rates which are not remunerative.

ADELAIDE HOSPITAL, DUBLIN.

THE fifty-first annual meeting of the supporters of the Adelaide Hospital, Dublin, was held on May 17th. Mr. Justice Ross presided. The report stated that the number of patients treated in the hospital in 1908 was 1,275, a number slightly less than that of the previous year. It included patients from every county in Ireland, as well as from other parts of the United Kingdom. Dealing with additions and alteration to the buildings, the report stated that the old roof had now been replaced by a vulcanite flat roof, at a cost of £450, and the result was in every way satisfactory, affording as it did operative accommodation and sunshine to the inmates. Through the generosity of Mrs. Duckett the committee were also able to carry out their desire to erect and equip a new sanitary wing, which was completed last November, and named "The Marie Duckett Wing." The report recorded the resignation of Miss Craig and the succession in her place as matron of Miss Fete. The number of attendances of out-patients treated in the dispensary during 1908 was 45,472, as compared with 32,812 in 1907. No religious distinction is made in the admissions to the dispensary. It is believed that the large majority attending are Roman Catholics. The total receipts in 1908 were £9,252 14s. 8d., and the expenditure (including settlement of an outstanding debit balance) was £8,563. At the end of the year there was a net credit balance of £699, as compared with a debit balance last year of £254. The report was adopted on the motion of the Chairman, seconded by the Rev. Canon Mahaffy. Dr. Little proposed and Rev. Dr. Clarke seconded a vote of thanks to the supporters of the hospital, and a vote of thanks to the Chairman closed the proceedings.

FREE HOSPITAL FOR SICK CHILDREN, BIRMINGHAM.

THE report presented to the annual meeting of the governors of the Birmingham Children's Hospital showed that 990 in-patients, 13,850 out-patients, and 547 casualties, making a total of 15,387, were treated in 1908. This was an increase of 538 on the previous year. There were 121 deaths among the in-patients, giving a mortality of 12.4 per cent. In 66 cases the patients died within seven days after admission. The number of operations performed was 2,138. The accounts for the year showed a deficiency of £294 as compared with £277 for the preceding year; this makes a total adverse balance of £1,233. The appeal for funds to rebuild the hospital was disappointing. The total sum that it was anticipated would be required was £90,000, and the response to the appeal resulted in promises to the extent of £19,904. The committee has purchased and paid for the whole site, but after bringing in the balance of legacies uninvested, amounting to £3,644, only about £6,500 remained with which to begin building. The committee do not consider that this sum is anything like large enough to justify the commencement of building operations.

DOWN DISTRICT ASYLUM.

AT the last meeting of the committee of management of the above asylum, Dr. M. J. Nolan, the medical superintendent, read his annual report for the year 1908. The report has not yet been published, but from an account of the proceedings in the *Down Recorder* of April 24th, we see that the report was of a satisfactory character. The high recovery-rate attained in the preceding four years was more than maintained, being 49 per cent. on the admissions; the death-rate, 10.2 in 1907, fell to 6.8 per cent., and the cost of maintenance was reduced. Also for the first year, in the knowledge of the medical superintendent, no case of dysentery, formerly prevalent in this asylum, had to be recorded.

Vacancies and Appointments.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column, advertisements must be received not later than the first post on Wednesday morning.

VACANCIES.

- BERMONDSEY MEDICAL MISSION.—Lady Resident Assistant.
BIRMINGHAM GENERAL DISPENSARY.—Resident Surgeon. Salary, £170 per annum, and £30 call allowance.
BIRMINGHAM GENERAL HOSPITAL.—(1) House-Surgeon. Salary at the rate of £50 per annum for (1) and (2), and £40 per annum for (3).
BOLINGBROKE HOSPITAL, Wandsworth Common.—(1) Resident Medical Officer; (2) House-Surgeon. Salary, £150 and £75 per annum respectively.

DIARY FOR THE WEEK.

TUESDAY.

- ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W. 5 p.m.—First Croonian Lecture by Dr. W. S. Lazarus-Barlow: Radio-activity and Carcinoma (an experimental inquiry).

THURSDAY.

- ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W. 5 p.m.—Second Croonian Lecture by Dr. W. S. Lazarus-Barlow: Radio-activity and Carcinoma (an experimental inquiry).

- ROYAL SOCIETY OF MEDICINE: DERMATOLOGICAL SECTION, 20, Hanover Square, 5 p.m.—(1) Paper: Drs. Wilfred Fox and Rolleston: A Case of Leukæmic Infiltration of the Skin. (2) Cases and specimens.

FRIDAY.

- ROYAL SOCIETY OF MEDICINE: SECTION OF DISEASES OF CHILDREN.—Provincial meeting at Edinburgh.

POST-GRADUATE COURSES AND LECTURES.

- CENTRAL LONDON THROAT AND EAR HOSPITAL, Gray's Inn Road, W.C.—Lectures: Tuesday, at 3.45 p.m.: Pharynx and Naso-pharynx. Friday, at 3.45 p.m.: Pharynx and Nasopharynx.
- LONDON SCHOOL OF CLINICAL MEDICINE, Seamen's Hospital, Greenwich.—Daily arrangements: Out-patient Demonstrations, 10 a.m.; Medical and Surgical Clinics, 2.15 p.m. and 3.15 p.m. respectively; Operations, 2 p.m. Special Clinics: Ear and Throat, at noon and 4 p.m., Monday, and noon, Thursday; Skin, at noon and 4 p.m., Thursday, and noon, Friday; Eye, 11 a.m., Wednesday and Thursday; Radiography, 4 p.m., Thursday. Special Lectures: Tuesday, 3.15 p.m., Fractures about the Ankle; Wednesday, 3.30 p.m., Glaucoma: Diagnosis and Treatment; Friday, 2.15 p.m., Some Varieties of Anæmia.

- MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, 22, Chancery Street, W.C.—The following clinical demonstrations have been arranged for next week at 4 p.m. each day: Monday, Skin; Tuesday, Medical; Wednesday, Surgical; Thursday, Surgical; Friday, Radiology. Lectures at 5.15 p.m. each day will be given as follows: Monday, The Diagnosis of Diseases of the Rectum and Anus; Tuesday, Clinacætic hæmorrhoids; Wednesday, Persistent Symptoms after Head Injuries; Thursday, Affections of the Umbilicus.

- NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, W.C.—Tuesday, 3.30 p.m., Tremor. Friday, 3.30 p.m., Surgery of the Nervous System.

- NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.—Monday, Clinics, 10 a.m., Surgical Out-patient, 2.30 p.m., Medical Out-patient; Nose, Throat, and Ear; X rays; 4.30 p.m., Medical In-patient. Tuesday, 10 a.m., Medical Out-patient Clinic; 2.30 p.m., Operations; Clinics: Surgical, Gynaecological; 4.30 p.m., Lecture on the Pathology of Cardiac Inflammations; Wednesday, 2.30 p.m., Medical Out-patient, Skin and Eye Clinics. Thursday, 2.30 p.m., Gynaecological Operations; Clinics: Medical Out-patient; Surgical Out-patient; X rays; 3 p.m., Medical In-patient; 4.30 p.m., Lecture-demonstration on the Administration of Anæsthetics; Friday, Clinics: 10 a.m., Surgical Out-patient; 2.30 p.m., Operations; Clinics: Medical Out-patient, Eye; 3 p.m., Medical In-patient.

- WEST LONDON HOSPITAL POST-GRADUATE COLLEGE, Hammersmith Road, London, W.—The following are the arrangements for next week: Daily, 2 p.m., Medical and Surgical Clinics; X Rays: 2.30 p.m., Operations. Monday and Thursday and Wednesday, 2 p.m., Diseases of the Eye (also Saturday, 10 a.m.). Tuesday and Friday, 10 a.m., Gynaecological Operations; 2 p.m. (and Wednesday and Saturday at 10 a.m.), Diseases of Throat, Nose, and Ear; 2.30 p.m., Diseases of the Skin. Wednesday and Saturday, 10 a.m., Diseases of Children; 2.30 p.m., Diseases of Women. Lectures: 10 a.m., Monday and Thursday: Demonstration by Surgical Registrar. Friday: Demonstration by Medical Registrar. At 12 noon, Monday: Pathological Demonstration. At 12.15 p.m., Tuesday, Wednesday, and Saturday: Practical Medicine. At 5 p.m., Monday, Practical Surgery. Tuesday, Valvular Disease; Aortic Obstruction. Wednesday, Medicine. Thursday, Clinical. Friday, "Pink Eye."

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

THE British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the BRITISH MEDICAL JOURNAL is supplied weekly, post free, to every member of the British Medical Association, wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent

by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three Members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the BRITISH MEDICAL JOURNAL for non-members is £1 8s. 0d. for the United Kingdom, and £1 15s. 0d. for abroad.

SUPPLEMENT TO THE BRITISH MEDICAL JOURNAL.

Meetings of Branches & Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

BORDER COUNTIES BRANCH: SCOTTISH DIVISION.

A MEETING of this Division was held at the Dumfries and Galloway Royal Infirmary, Dumfries, on Friday, June 4th. Dr. MAXWELL ROSS, in the absence of the Chairman and Vice-Chairman, was called to the chair.

Apologies for Non-attendance.—The SECRETARY intimated apologies for absence from Drs. MONRO, BELL, STEUART, MCKIE, and MURDOCH.

Confirmation of Minutes.—The minutes of the last meeting were read, approved, and signed by the CHAIRMAN.

Report of Executive Committee.—The report of the Executive Committee was read by the SECRETARY. It was unanimously agreed to accept the report, and that the Secretary be instructed to embody it in the minutes.

Election of Officers.—The following officers were then elected: *Chairman*, Dr. BELL (Lockerbie); *Vice-Chairman*, Dr. ANDERSON (Dalbeattie); *Secretary and Treasurer*, Dr. LIVINGSTON (Dumfries); *Representatives on Branch Council*, Dr. EASTERBROOK (Dumfries), Dr. SCOTT (Ruthwell), and Dr. MAXWELL ROSS (Maxwelltown); *Ordinary Members of Executive Committee*, Dr. ROGER (Sanguhar), Dr. KERR (Dumfries), Dr. BRYSON (Thornhill), Dr. COWAN (New Galloway); *Representative to Annual Meeting*, Dr. LIVINGSTON (Dumfries).

Rodger v. Herbertson.—The meeting then proceeded to the consideration of the case of Rodger v. Herbertson. The following motion was unanimously agreed to:

That this Division of the Border Counties Branch of the British Medical Association, in view of the important issues involved in the decision of the First Division of the Court of Session in the case of Rodger v. Herbertson and the undesirability in the interests of the medical profession generally, of leaving the case where it stands without the authoritative decision of the highest court in the realm, is of opinion that an appeal should be taken to the House of Lords, subject to a favourable opinion being obtained from the legal advisers of the Association.

Dr. ROBSON then moved that a copy of the foreshaid resolution be sent to the Council of the Border Counties Branch, with the request that at its annual meeting on June 24th a similar resolution be passed. This was unanimously agreed to. It was further unanimously agreed:

That the Division in view of the resolution passed on this date, that subject to a favourable opinion being obtained from the legal advisers of the Association, an appeal should be taken to the House of Lords in the case of Rodger v. Herbertson, do appoint a committee to consider ways and means of assisting Dr. Rodger to present said appeal, with power to this committee to institute a fund and to act otherwise as they in their discretion think advisable. The members of the Executive Committee of the Division to be members of this committee.

Whole time Medical Officers of Health.—On the motion of Dr. CLARKE it was unanimously agreed:

That this Division considers that as far as possible appointments as medical officers of health should be full-time appointments; that in exceptional circumstances, which should be approved by the central authority, they must of necessity be part-time appointments.

Medical Inspection of School Children.—The scheme of the Education Committee of the County Council of Dumfriesshire having been fully discussed, it was, on the motion of Dr. BRYSON, agreed:

That this Division very cordially approves of the scheme of the Education Committee of the County Council of Dumfriesshire.

It was further unanimously agreed that copies of this resolution be sent to the Scottish Education Department, London, to the Dumfries School Board, and to the Education Committee of the County Council of Dumfriesshire.

GLASGOW AND WEST OF SCOTLAND BRANCH: GLASGOW CENTRAL DIVISION.

THE annual meeting of this Division was held in the Faculty Hall, 242, St. Vincent Street, on Thursday, May 27th, at 4.15 p.m. Dr. ROBERT JARDINE, the Chairman of the Division, presided.

Confirmation of Minutes.—The minutes of the last meeting were read, approved, and signed.

Medical Inspection of School Children.—This matter was discussed, and the Representative being present became acquainted with the opinions of the members.

Ophthalmia Neonatorum Report.—After consideration it was decided that notification was desirable.

Business Management of the Association.—Mr. J. GRANT ANDREW proposed, Dr. JARDINE seconded, and it was carried unanimously:

That in view of the practical experience of the last thirty-seven years, during which period the Association has enjoyed great financial prosperity, it has been proved that in the best interests of the British Medical Association it is essential to have an official with the rank and status of "General Secretary and Manager," and that such official should possess special business training. Further, that having regard to the highly satisfactory manner in which Mr. Guy Elliston has discharged the duties since his appointment in 1902, it is in the interests of the Association that his services should be retained as "General Secretary and Manager," and that the Representative of the Glasgow Central Division to the Representative Meeting at Belfast be instructed accordingly.

Earlier Election of Representative.—Dr. JARDINE proposed, and Mr. GRANT ANDREW seconded, and it was carried:

That the Representative shall be elected by a general meeting of members, held not more than nine months nor less than three weeks before the annual Representative Meeting. Rule No. 7 of the Division's By-laws to be altered accordingly.

Report by the Representative.—Dr. JOHN ADAMS gave his report of the business dealt with at the Representative Meeting.

Election of Officers.—The following members were elected office-bearers for 1909-10: *Chairman*, Dr. Robert Jardine; *Vice-Chairman*, Mr. Jas. Grant Andrew; *Representative to Representative Meeting*, Dr. John Adams, 1, Queen's Crescent; *Representatives to Branch Council*, Dr. Robert Jardine, Dr. Peter Napier Grant; *Honorary Secretary and Treasurer*, Dr. Peter Napier Grant; *Executive Committee*, Dr. John Wright, Dr. W. S. Syme, Dr. Robert Perry, Dr. John Paterson, Dr. A. N. McGregor, Dr. R. K. Currie.

This concluded the business.

LANCASHIRE AND CHESHIRE BRANCH:

ALTRINCHAM DIVISION.

Election of Officers.—At a meeting held on June 10th the following members were elected office-bearers for the ensuing year: *Chairman*, Dr. Golland; *Vice-Chairman and Representative Member of the Central Council*, Dr. Garstang; *Honorary Secretary*, Dr. H. G. Cooper; *Branch Council*, Drs. C. J. Renshaw and P. R. Cooper; *Vice-President of Branch Council*, Dr. E. L. Luckman; *Honorary Assistant Secretary*, Dr. Rhodes. *Elected Members*: Drs. G. H. Smith, J. C. Smyth, Ransome, Cox, Gough, and Clarke; *Associate Members* (1909-10): Drs. F. C. Larkin (Liverpool W.), C. Macfie (Bolton), J. H. Taylor (Salford), Members of the Central Council; A. E. Hodder (Wigan), R. G. McGowan (Manchester N.), A. Greenwood (Blackburn), J. M. Ferguson (Burnley), W. Sykes (Preston), T. H. Murray (Warrington), G. H. Grant Davis (Manchester S.), and J. Buchan (St. Helens).

METROPOLITAN COUNTIES BRANCH:

ST. PANCRAS AND ISLINGTON DIVISION.

The annual meeting of this Division was held on Tuesday, June 8th, at the Midland Grand Hotel, King's Cross. Dr. SYKES, Medical Officer of Health for St. Pancras, presided.

Report of Executive Committee.—The Executive Committee's annual report was read and confirmed.

Unqualified Practice.—A letter from the Medical Secretary concerning the collection of evidence on unqualified practice was read and discussed. A committee, with Dr. Wynn Westcott, H. M. Coroner for North-East London, as Chairman, was appointed to collect evidence and to report to the Division.

Election of Officers.—The following officers for the ensuing year were elected: *Chairman*, Dr. G. F. Glinn; *Vice-Chairman*, Dr. E. D. Berton; *Honorary Secretary*, Dr. W. Griffith; *Executive Committee*, Drs. J. Crabb, J. R. Gabe, G. C. Hearne, T. Sayer, Walter Smith, J. F. J. Sykes, O. L. M. Theobalds, W. Wynn Westcott; *Representative in Representative Meeting*, Dr. Walter Smith; *Representatives on Branch Council*, Drs. J. F. J. Sykes, Walter Smith, and William Griffith.

Demonstration.—Dr. MORGAN DOCKRELL, Senior Physician to St. John's Hospital, gave a demonstration of the dermatological eruptions of syphilis, illustrating his remarks with coloured drawings and microscopical specimens. Hand-coloured drawings were handed round the meeting illustrating the characteristic cutaneous manifestations of the various stages of the disease. The *Spirochaeta pallida* was demonstrated in smears and in sections, and histological preparations showing the minute structure of the various eruptions were shown under the microscope. The lecturer pointed out the variety of the primary lesions, the various modes of inoculation, the occurrence of extra-genital and innocent infection, the frequent obscurity of the histories, and gave interesting examples of "silent" syphilis where the later manifestations appeared with entire absence of history or evidence of the primary lesion. He described the protean character of syphilis, the great tendency of its efflorescence to imitate other eruptions while still maintaining its own individual characteristics, its behaviour when associated with other skin rashes, and the salient points in the differential diagnosis of syphilis and other conditions resembling it. He thought a word of warning was necessary with regard to certain reputed preventive measures which frequently led to disaster through giving a false sense of security. Dr. SYKES dealt with the subject from a public health point of view; he pointed out the difficulties in the way of notification, and gave a description of the various methods employed on the Continent and in the public services with the view of prevention. He thought the best hope of prevention lay in the amelioration of social and economic conditions. Dr. THEOBALDS gave his experience of the disease in Malta, and Dr. SAYER, Dr. WARD LAWSON, Dr. BERTON, and other members took part in the discussion. Various members commented on the exceptional beauty of the coloured drawings, and the meeting concluded with a hearty vote of thanks to Dr. Morgan Dockrell for his very interesting demonstration.

MUNSTER BRANCH.

The annual general meeting of this Branch was held on Saturday, June 12th, Lucy E. SMITH, M.D., President, in the chair.

Confirmation of Minutes.—The minutes of the last annual general meeting were read and signed. The minutes of the Council meetings were read.

Apologies for Non attendance.—Apologies for inability to attend were read from Surgeon-Colonel Hunt, and G. Myles, M.D. Limerick.

Representative on Central Council.—Professor H. Corby, M.D., having been duly nominated in accordance with By-law 27, was elected Representative on the Council of the Association for 1909-10.

Representative to Representative Meeting.—Dr. Lucy E. Smith, Verdon Place, Wellington Road, Cork, was elected unanimously.

Representative of Branch on Irish Committee.—Dr. J. Giusani was unanimously elected for 1909-10.

New Member.—Theodore Francis Ritchie, A.M.S., was elected a member of the Association.

Election of Officers and Council of the Branch for 1909-10.—The following were elected officers: *President*, Dr. John J. Fitzgerald; *Vice President*, Professor C. Yelverton Pearson, F.R.C.S.; *Retiring President*, Dr. Lucy E. Smith; *Council*, Drs. W. Ashley Cummins, H. R. Townsend, P. J. Cremon, D. J. O'Connor, O. McCarthy, T. B. Moriarty, N. Henry Hobart, T. O'Meara, M. Cagney, J. Giusani, J. T. O'Connor, T. Gelston Atkins; *Honorary Secretary and Treasurer*, Dr. Philip G. Lee.

Financial Statement.—It was reported that the financial affairs of the Branch were in a satisfactory condition.

Ethical Cases.—On the motion of Dr. T. B. Moriarty it was decided:

That in future the Council of the Branch should itself come to a conclusion in an ethical case.

SOUTH-EASTERN OF IRELAND BRANCH.

A MEETING of this Branch was held in the Council Chamber, Town Hall, Clonmel, on June 2nd, at 12 o'clock noon, J. W. H. JELLETT, M.D., in the chair. Fourteen other members were present.

Apologies for Non-attendance.—Twelve members sent apologies for inability to attend.

Confirmation of Minutes.—The minutes of the last meeting were read, approved, and signed.

Irish Poor Law Medical Service.—Dr. WALSH, in accordance with notice, moved, and Dr. P. MURPHY seconded:

That in any legislation that may follow the reports of the Royal and Viceregal Commissions to inquire into the working of the Poor Laws, the British Medical Association be requested to use all its influence to safeguard the interests of the Irish dispensary medical officers and medical officers to workhouses, and to secure: (a) That entrance to the Irish Poor Law Medical Service shall be by competitive examination; (b) that adequate salaries shall be fixed; and (c) superannuation allowances be made compulsory on the lines of Civil Service superannuation regulations.

The following amendment was proposed by Dr. LAFFAN and seconded by Dr. POWER:

That it is eminently unsafe for the medical profession who are engaged in looking for their own betterment to incur the hostility of all the public bodies of the country by seeking to deprive them of one of the most important of their privileges, and that therefore that part of Dr. Walsh's motion which refers to the stripping of these bodies of their patronage be and is hereby omitted.

The amendment was rejected. The following amendment was then proposed by Dr. LAFFAN and seconded by Dr. QUIRKE:

That, in the event of a competitive system being introduced, it should be a bona fide examination system—that is, one like the army, etc.—and not the illusory one proposed by the Commission.

The amendment was carried *nemine contradicente*. Dr. Walsh's resolution as amended was then put to the meeting and carried *nemine contradicente*.

Dinner Fund.—In accordance with notice Dr. LAFFAN moved and Dr. WYNN seconded:

That members be requested to contribute 2s. 6d. each annually towards a dinner fund, whether they attend or not, the proceeds to be allocated proportionately to each Division centre (wines and tobacco not included) and any deficit to be supplied by those actually present at dinner.

The following amendment was proposed by Dr. POWER and seconded by Surgeon-Colonel RIORDAN:

That the original arrangement re lunch continue as formerly.

This was carried *nemine contradicente*. Another amendment was proposed by Dr. QUIRKE and seconded by Dr. O'CONNELL as follows:

That in view of the large number of affirmative replies received, that Dr. Power's amendment apply only to the Tipperary section of the Branch, and that members belonging to that section be not required to contribute towards the luncheon expenses of remaining portion.

The amendment was rejected.

Reports of Divisional Meetings to "British Medical Journal."—Dr. QUIRKE moved, and Dr. HENNESSEY seconded:

That Honorary Secretaries of Divisions furnish reports of meetings of their Divisions to the BRITISH MEDICAL JOURNAL.

This was carried *nemine contradicente*.

Remuneration for Temporary Duty.—It was proposed by Dr. SHEE, and seconded by Dr. HENNESSEY:

That, in consequence of the refusal of the Local Government Board to sanction a greater amount than four guineas a week for temporary duty in dispensary districts in cases in which exceptional circumstances make this amount insufficient remuneration for such service, the Branch requests its members that none of them should act in such cases unless he previously receives in cash from the relieving officer such amount per day or per week as would be reasonable recompense for the work to be done until the Local Government Board amends its procedure in the matter. Copies of this resolution to be sent to each member of the Branch, to the Local Government Board, to the Chief Secretary for Ireland, to the Chairman of the Parliamentary Bills Committee of the Association, and to the Clerk of all the Poor Law Unions within the area of the Branch.

The resolution was carried *nemine contradicente*.

Notice of Motion.—Dr. O'BRIEN gave notice that he would move at the next meeting:

That the third Wednesday in June be fixed for our future annual Branch meetings at Clonmel at 12 o'clock noon.

Cases.—Dr. P. I. BYRNE next exhibited two cases of great surgical importance, and all the members were

deeply interested in the well-thought out lines of treatment explained and pursued.

Luncheon.—All the members lunched together at the Ormonde Hotel.

STAFFORDSHIRE BRANCH:

SOUTH STAFFORDSHIRE DIVISION.

The annual meeting of the Division was held on Thursday, June 3rd, at 4 p.m., Dr. BADGER in the chair. There were also present: Drs. Malet, Clendinnen, Arthill, Bailey, Deanesly, and Codd.

Apologies for Non-attendance.—Apologies were received from Messrs. Cholmeley and Cridland.

Election of Officers.—The following officers were elected for the ensuing year: *Chairman*, W. F. Cholmeley; *Vice-Chairman*, W. R. Somerset; *Secretary*, J. A. Codd; *Representative in Representative Meetings of Association*, E. Deanesly; *Three Representatives on Branch Council*, T. R. Bailey, W. F. Cholmeley, and H. Malet; *Three Members of Executive of Division*, A. B. Cridland, Wm. Clendinnen, and W. S. Badger.

Earlier Election of Representatives.—It was resolved:

That Rule 7 be amended as follows: "That the Representatives of the Division at the Representative Meeting be elected in January in each year, and shall take office at the following Annual Representative Meeting."

Vaccination Objectors and Justices of the Peace.—Dr. CLENDINNE drew attention to the practice of some Justices of the Peace granting to vaccination objectors exemption certificates at their private houses and places of business, and the meeting, although recognizing that the practice was objectionable, in the face of recent legislation could not see their way to pass any resolution on the subject.

Radiography by a Private Soldier.—Dr. Codd read some correspondence he had had with Major Spencer, R.A.M.C., with regard to a private who had taken out a course of instruction in the x-ray apparatus used at the Queen Alexandra Military Hospital, and that this private proposes to take radiography and carry out x-ray treatment in private. The meeting resolved that the Secretary send a copy of the correspondence to Major Dent, and ask him to represent the views of Major Spencer to the private in question.

Representation of Local Profession on Hospital Boards.

—On the question of the representation of the local medical profession on boards of hospitals and similar bodies, the Representative was instructed to use his own discretion in voting.

Medical Certification of Suitability of Patient for Hospital Treatment.—In regard to this matter, the meeting approved of Recommendation 7, but considered that the practical difficulties were too great for immediate adoption.

Contribution to Hospitals by Employers and Employees.

—On this matter it was resolved:

That no contributions should be given to, or received by, hospitals, except as pure charity, without any self-interests or ulterior motive, but the matter has gone too far, otherwise in some particulars (such as employers' or employees' contribution), to now interfere with; but we would strongly deprecate any further advance in the same direction.

Fresh Public Medical Institutions.—The meeting approved of the statement as to fresh public medical institutions.

Sanatoriums for Tuberculous Workers.—On this question, the meeting approved of Statement 3 (A), (B), (C) and 4.

YORKSHIRE BRANCH:

HARROGATE DIVISION.

The annual meeting of this Division was held on Thursday, May 13th, at 8.30 p.m., at the Hotel Majestic, Dr. BAIN in the chair. There were also present Drs. Black, Mantle, Ward, Williamson, Pringle, Nims, Watson, and Drs. Bronner and Mason visitors.

Dinner.—Dinner was at 7.30 p.m., six being present.

Apology for Non-attendance.—A letter was read from Dr. Green (Chairman) regretting his inability to attend.

Confirmation of Minutes.—The minutes were read and confirmed.

Election of Officers.—The following officers for the ensuing year were elected: *Chairman*, Dr. Bain; *Vice-Chairman*, Dr. W. M. Crawford Watson; *Honorary*

Secretary, Dr. Gibson; Representative for Representative Meeting, Dr. Gibson (provisionally); Representative on Branch Council, Dr. Solly; Executive Committee, Drs. Chamberlain, Collier, Daggett, Garrad, Holroyd, Lever, Mackay, Rutherford, Solly, W. Bertram Watson, and Crawford Watson.

Medical Inspection of School Children.—The report of the Medico-Political Committee on School Children was read and discussed, with the following recommendations:

- That the duties of assistant medical officer of health should be sanitary as well as educational, so as to enable the holder to have experience of the duties of medical officer of health.
- Payment by fixed salary is preferable.
- That where a school nurse is employed she should be strictly under the instructions of the medical officer.
- That the British Medical Association should oppose the reference of school children to charitable institutions, the work of hospitals being confined to charitable relief.
- That the children should be sent to their own doctor for treatment, but, if too poor to pay for medical advice, then to the parish doctor. Unfortunately a number of children attend the council schools (paid for out of the rates) whose parents are well able to pay for the education of their children.

Whole-time Medical Officers.—The Memorandum of the Public Health Committee on this matter was considered, and it was resolved:

That medical officers of health should be whole-time officers, except in small or thinly-populated districts, and that security of tenure should be secured.

Medical Certification of Suitability for Hospital Treatment.—In regard to this matter it was resolved:

That inability to pay for adequate treatment shall be the consideration for the admission of all patients for hospital treatment, and except in emergencies sufficient evidence should be obtained that the patient is not in a position to pay, and that the case is from a hospital point of view suitable for treatment.

That a medical certificate of suitability for hospital treatment be required.

Contributions to Hospitals by Employers and Employees.—This subject was discussed, and it was resolved:

That contributions to hospitals by employers or employees do not entitle the contributors to gratuitous medical attendance.

That the medical profession should be adequately represented on hospital boards.

Current Work of Association.—The report on current work of the Association was considered.

LEEDS DIVISION.

A MEETING of this Division was held in the Leeds Public Dispensary on June 10th, when twenty-three members and friends were present. The CHAIRMAN of the Division, Professor Wardrop Griffith, presided.

Pelvic Haematocoele in a Virgin.—Mr. H. J. ROPER read a paper on this subject, and said the illness began with a sudden faintness, which passed off on lying down. She was seen a week later, when the pelvis was found to be filled with a solid effusion, pushing the uterus bodily upwards behind the symphysis pubis, and extending on both sides about 2 in. above Poupart's ligament, and obliterating Douglas's pouch and surrounding the rectum. Absolute rest in bed for some weeks resulted in complete absorption, with the exception that after seven months a small abscess formed, and discharged through the bladder, but it never became offensive. The diagnosis was made by excluding other possible causes, such as appendicitis, tubal disease, or pelvic cellulitis due to sepsis. It was not tubal pregnancy which had ruptured, for the hymen was perfectly intact, the uterus was not enlarged, the periods had been perfectly regular up to the onset of the trouble, the illness having begun five days after the last period ceased, and there were no changes in the breasts. The result was complete absorption and disappearance of all physical signs. The paper was discussed by the CHAIRMAN and Drs. CHURTON, FOX, and CLARKE.

Pelvis and Phantom.—Mr. MCGREGOR YOUNG demonstrated an ingeniously constructed pelvis and phantom used for teaching students. The pelvis was made of wood by a local joiner to Mr. Young's instructions. It was rather larger than the normal female pelvis, but it was constructed to scale. The phantom was of proportionate dimensions. This could be enclosed in a stout holland

bag, and when placed in the pelvis the student was able to palpate the phantom and to tell the various positions in which it had been placed by the teacher. By a series of straps and buttons the phantom could be fixed in face, anterior, posterior, or other position, and the passage through the pelvis and outlet clearly shown. The vulva and perineum were represented by a combination of leather and elastic membrane, so that the stretching of the perineum and the sweeping of the head over it could be cleverly imitated. The author was complimented on the ingenuity with which his model had been constructed.

Great Arterial and Venous Tension: Venesection.—Dr. CHURTON showed sphygmograms from a man aged 55. The upstroke was sloping. There appeared to exist (1) increased quantity and viscosity of the blood (plethora); (2) consequent hypertrophy of the arterial musculature; (3) hypertrophy of left ventricle; (4) after a severe cold or influenza, some dilatation of the left ventricle and a slight mitral regurgitation, but with not much mitigation of arterial distension—the radials being very full and very tense at each systole. Veins full. No dropsy; no albuminuria. Radials thick but smooth (they were equally thick two years ago, but after venesection, etc., gradually became normal). Twenty-six ounces of blood were withdrawn, with immediate relief to the discomforts previously felt—dizziness, difficulty of breathing, oppression in chest, etc. Dr. Churton had frequently observed radial arteries thickened and supposed to be sclerotic which regained their normal state. The CHAIRMAN and Dr. SHARP made remarks on the paper. The former made some interesting observations on the relationship of arterio-sclerosis to high arterial tension, and emphasized the point that in the ordinary order of things every one "suffered" from arterio-sclerosis as the result of advancing years.

Glandular Tuberculosis.—Dr. E. F. TREVELYAN made some remarks on twelve cases of glandular tuberculosis, all of which except one were at present under tuberculin (TR) treatment at the Leeds Public Dispensary, and most of which had already shown marked improvement. In three recurrent cases there was considerable infiltration of the skin at the site of a previous operation. Surgical treatment, where necessary, should of course be adopted, as suppuration and caseation could certainly not otherwise be brought to satisfactory healing. Tuberculin treatment should be commenced early, and should also supplement operation where the latter was necessary. It seemed to him that quite small doses of tuberculin could be used in such cases of limited and closed tuberculosis with almost absolute safety, whereas much greater caution was necessary in an open tuberculosis such as phthisis. The subject was discussed by Drs. WOODCOCK, CHURTON, and DAWSON, and in reply Dr. TREVELYAN said that he never treated pulmonary phthisis with tuberculin in the out-patients' room unless such treatment had already been commenced in an institution, or unless he could rely upon the patients strictly carrying out printed directions.

Cases.—Cases were shown and a demonstration given as follows:—Mr. MICHAEL A. TEALE: (a) High myopia, showing Weiss's line in the fundus; (b) vascularized exudation projecting into the vitreous humour, with white degeneration of some of the retinal vessels; (c) a man in whom Hess's operation had been done for complete paralytic ptosis of the left lid; (d) sarcoma of the ciliary region; (e) rupture of the choroid. Mr. SEATON: A patient in whom suture of the divided ends of the ulnar nerve had been done one month ago. Dr. TREVELYAN: (a) Tabes dorsalis in which paralysis of the sixth nerve in course of improvement was followed by an incomplete paralysis of the third nerve; (b) spastic paralysis in the legs in which sensory disturbances were present. Mr. ALEX. D. SHARP: Demonstration on the direct inspection of the larynx by Brining's and Chevalier Jackson's instruments.

SHEFFIELD DIVISION.

Election of Officers.—The following members have been elected office-bearers for 1909-10: *Chairman*, Dr. W. Longbottom; *Vice-Chairman*, Dr. A. Forbes; *Honorary Secretary (pro tem)*, Dr. A. W. Forrest, Duu Edin, Atercliffe Common, Sheffield; *Representative for Representative Meeting*, Dr. R. Gordon, 26, Wolstenholme Road, Sheffield; *Representatives on Branch Council*, Dr. Sinclair White, Professor R. J. Pye-Smith, Dr. J. F. Cheesewright, Professor A. Hall;

Executive Committee. Drs. T. A. Sheahan, O. H. Hudson, J. H. Brown, J. G. Mylan, C. H. Willey, W. W. Banham, A. L. Husband, A. W. Cuff, W. Branson, S. Barber, J. Sorley, A. G. Wilson, G. H. Dawes, C. M. Anderson, P. Telles, G. Carter, E. W. T. Smith, E. France, J. MacKinnon, A. Reckless, W. H. Nutt, C. S. Killham, C. Wiseman, J. W. Martin.

✚ To ensure the insertion of notices in this column, they must be received at the Central Offices of the Association not later than the first post on Tuesday.

Association Notices.

ANNUAL GENERAL MEETING.

Notice is hereby given that the 1909 Annual General Meeting of the British Medical Association will be held in the Assembly Hall, Belfast, on Friday, July 23rd, at Twelve noon.

[This Meeting is to comply with Article XII, and will adjourn forthwith until Tuesday, July 27th, at 2.30 o'clock.]

ANNUAL REPRESENTATIVE MEETING.

Also, notice is hereby given that the 1909 Annual Representative Meeting will be held in the Assembly Hall, Belfast, on Friday, July 23rd (and following days as required), immediately after the Annual General Meeting, fixed for Twelve noon, on Friday, July 23rd.

BY ORDER OF THE COUNCIL,

GUY ELLISTON.

May, 1909.

COUNCIL MEETING.

A MEETING of the Council will be held at 2 o'clock in the afternoon of Wednesday, June 30th, in the new Council Room, at 429, Strand, London, W.C.

By Order,

GUY ELLISTON.

June 10th, 1909.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BATH AND BRISTOL BRANCH: BATH DIVISION.—The annual meeting of this Division will be held at the Royal United Hospital on Saturday, June 26th, at 6.0 p.m. Business: (1) To elect officers. (2) To receive annual report. (3) To consider business of Annual Representative Meeting. (4) To consider matters referred to Divisions (see SUPPLEMENT to BRITISH MEDICAL JOURNAL, May 8th). (5) To modify Divisional Rule No. 7, for ensuring earlier appointment of Representative.—D. LESLIE BEATH, Honorary Secretary.

BIRMINGHAM BRANCH: CENTRAL DIVISION.—The annual meeting of this Division will be held at the Medical Institute on Wednesday, June 30th, at 3.30 p.m., at which the election of officers for the ensuing year will be held. Nominations in writing for the offices of Chairman, Vice-Chairman, and two Honorary Secretaries must reach the Honorary Secretaries not later than Wednesday, June 9th.—A. W. NUTHALL, W. TRACY LYDALL, Honorary Secretaries.

BORDER COUNTIES BRANCH.—The annual general meeting of the Branch will be held in the County Hotel, Carlisle, on Friday, June 25th. Business: To receive the report of the council for the past year; to elect the officers of the Branch; and Dr. Murdoch, of Annan, will deliver his Presidential address. Further details of information will be sent to each member by post.—FRANCIS R. HILL, Honorary Secretary, 62, Warwick Road, Carlisle.

CAMBRIDGE AND HUNTINGDON BRANCH.—The annual meeting of the Cambridge and Huntingdon Branch will be held at Cambridge on Tuesday, July 13th, at 12.30.—H. B. RODRICK, Honorary Secretary, Cambridge.

DORSET AND WEST HANTS BRANCH.—The summer meeting of this Branch will be held in Christchurch, Hants, on Wednesday, July 7th. Members wishing to read papers, show cases, exhibit specimens, or propose new members, must communicate with the undersigned not later than Thursday, June 24th.—JAMES DAVISON, Honorary Secretary, "Streateplace," Bournemouth.

EAST ANGLIAN BRANCH.—The annual meeting of the Branch will be held at the Grand Hotel, Clacton-on-Sea, on Thursday, July 8th.—B. H. NICHOLSON, East Lodge, Colchester, Honorary Secretary.

LANCASHIRE AND CHESHIRE BRANCH: Science Committee.— Gentlemen who would be willing to give addresses, demonstrations, etc., at Division meetings during the course of next winter will oblige by sending their names and the title of the subjects they propose to deal with as soon as possible to F. CHARLES LARKIN, Branch Secretary, 54, Rodney Street, Liverpool.

LANCASHIRE AND CHESHIRE BRANCH: ALTRINCHAM DIVISION.—*Clinical and Scientific Meeting.*—A meeting will be held at the Board Room of the Altrincham Hospital at 5 p.m. on Thursday, June 24th. (Afternoon tea 4.30 p.m.) Clinical cases will be shown, and Dr. Rhodes will read a paper on Scarlet Fever, to be followed by a discussion. Dinner at the Brooklands Hotel, 7.30 p.m. Ladies invited. Names must be given to the Honorary Secretary by Monday, June 21st.—H. G. COOPER, Honorary Secretary.

LEINSTER AND SOUTH-EAST OF IRELAND BRANCHES.—*Nominations for Central Council.*—Nominations of candidates for the two seats on the Council of the Association should be sent to the undersigned on or before June 21st.—ARTHUR H. WHITE, Malvern, Terenure Road, Dublin.

METROPOLITAN COUNTIES BRANCH.—The annual meeting of the Branch will be held at the St. James's Vestry Hall, Piccadilly, on Thursday, June 24th, at 5 p.m. Business: (1) To receive the annual report of the Branch Council. (2) To receive the report of the Representatives of the Branch on the Central Council. (3) To receive the report of the scrutineers of the ballot elections. (4) An address by Dr. Ford Anderson, the incoming President, etc.—ATWOOD THORNE, M.B., E. W. GOODALL, M.D., Honorary Secretaries.

METROPOLITAN COUNTIES BRANCH: KENSINGTON DIVISION.—The conference agreed upon on May 12th has been fixed provisionally for July 6th. Any member of the Division who desires to be present should send in his name to Dr. G. CRICHTON, 114, Lexham Gardens, Kensington, W.

MIDLAND BRANCH: BOSTON AND SPALDING DIVISION.—The annual meeting of this Division will be held on Tuesday, June 22nd, at the White Hart Hotel, Boston, at 12.45 p.m. Luncheon will be provided at 2 p.m.; tickets, 3s. 6d. each (exclusive of wine). Members are requested to reply not later than June 19th if they intend to be present at the luncheon, as those members accepting will be held responsible for the value of their tickets. Members may bring guests to the luncheon. Agenda: (1) Election of officers, including the President-elect of the Branch. (2) Programme for the year. (3) Matters referred to Divisions: (a) Treatment of school children; (b) unqualified practice. (4) Annual report. (5) Motor meet. (6) Invitation to Midland Branch to meet in the Division. (7) Any other business.—A. E. WILSON, Honorary Secretary, Boston.

NORTH OF ENGLAND BRANCH: NORTH NORTHUMBERLAND DIVISION.—The annual meeting will be held at the Plough Hotel, Alnwick, on Thursday, June 24th, at 3.30 p.m. Business: (1) Election of officers. (2) Motives question. (3) Any other business.—C. CLARK BURMAN, Honorary Secretary.

NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCH.—The annual meeting will be held on Wednesday, June 30th, at the Grand Hotel, Morecambe, at 3.30 p.m. Members willing to show cases or specimens are requested to communicate with A. S. BARLING, Honorary Secretary, Lancaster.

OXFORD AND READING BRANCH.—The annual meeting of this Branch will be held at the Radcliffe Infirmary, Oxford, on Wednesday afternoon, June 30th. The dinner after the meeting will be held at Lincoln College. The President for 1909-10 will be H. G. A. Whitlock, Esq., M.D., F.R.C.S.—W. T. FREEMAN, Honorary Secretary.

SOUTH-EASTERN BRANCH.—The sixty-fifth annual meeting of the Branch will be held in the Town Hall, Croydon, on Wednesday, June 23rd, at 2.15 p.m. Dr. J. J. Macan (President-elect) kindly invites members to lunch at the Greyhound Hotel from 1 to 2 p.m. Agenda: in addition to the business of an ordinary meeting: (1) To receive the report of the election of new officers, who shall thereupon take office. (2) To receive the report of the Council on the affairs of the Branch and the annual financial statement. After the meeting members are invited by Dr. Pasmore to a garden party at the Mental Hos-

pital, Warrington. The dinner will be held at the Greyhound hotel at 6.15 p.m., charge 5s. Wine will be provided by the local members. Those who propose to be present at lunch, the garden party, or dinner, are requested to signify their intention to Dr. E. H. Wilcock, 91, London Road, Croydon, not later than Saturday, June 19th.—H. M. STEWART, Honorary Secretary.

SOUTH-EASTERN BRANCH: ISLE OF THANET DIVISION.—The annual meeting of this Division will be held at the Victoria Hotel, Hardres Street, Ramsgate, on Friday, June 25th, at 4 p.m., Dr. Halstead in the chair. Agenda: (1) Election of officers for the year. (2) The Executive Committee give notice that they will move the alteration of Rule 7, re election of Representative. (3) Correspondence. (4) The agenda of the Annual Representative Meeting has been before the members, and has been printed in the recent SUPPLEMENTS of the JOURNAL. If any member wishes to bring up any point for discussion, he is requested to notify the Honorary Secretary before the meeting. (5) Consideration of a report on the desirability of health officers being required to give their whole time to the work (see SUPPLEMENT to the BRITISH MEDICAL JOURNAL, January 23rd, 1909). (6) Consideration of the report of the Chairman of the Sanatorium Committee (see SUPPLEMENT to the BRITISH MEDICAL JOURNAL, May 9th, 1909). All members of the South-Eastern Branch are invited to attend these meetings and to introduce professional friends.—HUGH M. RAVEN, Honorary Divisional Secretary.

SOUTH MIDLAND BRANCH: NORTHAMPTONSHIRE DIVISION.—The annual meeting of the Division will be held in the board room of the General Hospital, Northampton, on Tuesday, June 29th, at 2.30. The meeting will be preceded by a luncheon at Franklin's Restaurant at 1.30, and the Secretary will be much obliged if those wishing to attend the luncheon will notify him at least two days beforehand. Business Minutes. Annual report. Election of officers for ensuing year. Report on medical treatment of school children. Report on treatment of ophthalmia neonatorum. Any other business.—P. S. HICHENS, M.D., Honorary Secretary, Northampton.

SOUTH-WESTERN BRANCH.—The seventieth annual meeting will be held on Wednesday, June 30th, at the Bridge Hall, Bideford, at 3.15 p.m., when Dr. Banks will resign the chair to Dr. Toye, who will deliver his inaugural address. The report requested by the Council for the year 1908-9, and the annual statement for the year 1908 will be presented to the meeting, and the officers of the Branch will be elected for the year 1909-10. Luncheon, by the invitation of the President-Elect, will take place from 1 to 2.30 p.m. at the Royal Hotel, Bideford. The annual dinner will be held at 6.15 for 6.30 at the Royal Hotel. Tickets, 5s. each (exclusive of wine), can be had from Dr. E. Pearson, Strand House, Bideford. It is particularly requested that members requiring tickets will send their names to him before June 25th. Dr. E. Pearson, Strand House, Bideford, has kindly promised to entertain the members at tea at 4.30 p.m. Members desiring to be accommodated with bed and breakfast are requested to send their names to Dr. E. Pearson, Bideford, who will endeavour to arrange for them.—RUSSELL COOMBE, Honorary Secretary, 5, Barnfield Crescent, Exeter.

STAFFORDSHIRE BRANCH.—The thirty-sixth annual meeting of the Branch will be held at the White Hart Hotel, Burton-on-Trent, on Thursday, June 24th, at 4 p.m., when an address will be delivered by the President-elect, W. G. Lowe, M.D. Agenda: (1) Minutes of the last annual meeting. (2) Introduction of the new President. (3) Correspondence. (4) Address by the President. (5) Report of the Council. (6) The financial statement. (7) Election of officers for the ensuing year—President-elect, Secretary, and Treasurer. (8) To decide the place of holding the next annual meeting. (9) Report on the election of the Representative of the Branch on the Council of the Association. Members have the privilege of introducing friends. Dinner at 6 p.m., charge 5s. The first general meeting of the session will be held at Stoke, on Thursday, November 25th. Members desiring to read papers are requested to communicate the titles to the General Secretary as soon as possible. G. PETGRAVE JOHNSON, Honorary General Secretary, Stoke-on-Trent.

WEST SOMERSET BRANCH.—The sixty-seventh annual meeting of this Branch will be held at the London Hotel, Taunton, on Friday, July 2nd, at 12.30 p.m., when the chair will be taken by the new President, Mr. Chas. Farrant. Agenda: Annual report. Balance-sheet for 1908. Election of President-elect. Election of Representative. Election of other officers. Letter from Colonel Boyle re the examination of recruits for the Somerset Territorials. President's address. "Haematuria from a Surgical Standpoint." Lunch will be served by 1.30, at a charge of 3s. per head, exclusive of wine, etc. After lunch those present will become the guests of the President, and will be driven to the Pickering Golf Links (four miles), which will be at their disposal, and where they will be entertained to tea. Members are requested to intimate to the Honorary Secretary by Tuesday, June 29th, if they intend to be present at the lunch and wish to be driven to Pickering.—W. B. WINCKWORTH, Honorary Secretary.

YORKSHIRE BRANCH.—The annual meeting of the Branch will be held at the Grand Hotel, Scarborough, on Saturday, June 26th.—ADOLPH BRONNER, Honorary Secretary, 33, Manor Row, Bradford.

YORKSHIRE BRANCH: LEEDS DIVISION.—The annual meeting will be held at 4 p.m. on Tuesday afternoon, June 22nd, in the General Infirmary, Leeds. Business: To receive the Secretary's and Treasurer's reports; to appoint the executive for the coming year; to elect a Representative to the annual meeting of the Association.—JAMES ALLAN, Honorary Secretary.

GENERAL MEDICAL COUNCIL.

DISCIPLINARY CASES.

We have received from Dr. E. Burgess, who acted as one time as locumtenent for Dr. Brown, against whom a charge was brought and dismissed during the last session of the General Medical Council (SUPPLEMENT to the BRITISH MEDICAL JOURNAL, June 5th, p. 354 et seq.), a letter in which he says he wishes it to be understood that the statement he made that he had informed the patient that "Dr." Amery was not a qualified man, was made to Mr. Amery and not to Dr. Brown. Dr. Burgess states that so far as he was concerned Mr. Bodkin's address hit the right nail on the head, as his evidence could have had no bearing upon Dr. Brown, but only upon Mr. Amery. Dr. Burgess also desires it to be understood that the legal representative of the complainant was mistaken in saying that he (Dr. Burgess) was unwilling to attend the inquiry. He was, he says, quite prepared to support his declaration by verbal evidence before the Council, but was informed by the solicitors on the Saturday previous to the hearing that they did not think his presence would be required.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

The following appointments have been made at the Admiralty: Surgeon E. L. ATKINSON to the *Achilles*, on completing, June 17th; Fleet Surgeon K. S. to the *Impregnable*, June 5th; Fleet Surgeon G. RICHARDSON, M.B., to the *Carnarvon*; E. R. L. THOMAS, to the *Hannibal*.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 8,972 births and 3,962 deaths were registered during the week ending Saturday last, June 12th. The annual rate of mortality in these towns, which had been 14.7, 13.9, and 12.3 per 1,000 in the three pre-calculation weeks, rose again last week to 12.6 per 1,000. The rates in the several towns ranged from 5.2 in King's Victoria, 5.6 in Tottenham, 6.5 in Hornsey, 6.8 in Bootle, 7.1 in Croydon, and 7.2 in Willesden, to 19.4 in Salford, 19.7 in Hanley, 19.8 in Middlesbrough, 20.7 in Oldham, 21.1 in Stockport, 23.1 in Warrington, and 23.6 in St. Helens. The rate of mortality in the London area, which averaged 12.7 in the seventy-five other large towns. The death-rate from the principal infectious diseases averaged 1.2 per 1,000 in the seventy-six towns; in London these diseases caused a death-rate of 1.3 per 1,000, while in the other towns the rates ranged upwards to 2.6 in Coventry, 2.7 in Rhondda, 4.0 in Wolverhampton, 4.5 in Salford, 5.6 in Norwich, and 5.2 in West Bromwich. Measles caused a death-rate of 1.4 in East Ham and in Liverpool, 1.5 in Walsley, 1.6 in Walsall, 3.0 in Salford, 3.1 in West Bromwich, 4.0 in Wolverhampton, and 4.2 in Norwich; diphtheria of 1.5 in Merthyr Tydfil, whooping-cough of 1.5 in Middlesbrough; and diarrhoea of 1.5 in Hanley and in Rhondda. The mortality from scarlet fever and from enteric fever showed no marked excess in any of the large towns, and no local case of small-pox was registered during the week. The number of 5.5 in Salford were under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 2,234, 2,254, and 2,223 at the end of last week; 395 new cases were admitted during the week, against 348, 335, and 275 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

During the week ending Saturday last, June 12th, 957 births and 518 deaths were registered in eight of the principal Scottish towns. The annual rate of mortality in these towns, which had been 17.5, 16.7, and 16.3 per 1,000 in the three preceding weeks, further declined last week to 14.5 per 1,000, but was 1.9 per 1,000 above the mean rate during the same period in the twenty-six inland English towns. Among the Scottish towns the death-rates ranged from 11.6 in Leith and 12.3 in Greenock to 15.9 in Glasgow and 19.3 in Paisley. The death-rate from the principal infectious diseases averaged 1.5 per 1,000 in these eight towns, the highest rates being in Edinburgh: 4 of diarrhoea in Dundee. The 265 deaths registered in Glasgow included 5 from scarlet fever, 2 from diphtheria, 13 from whooping-cough, 3 from enteric fever, 2 from cerebro-spinal meningitis, and 5 from diarrhoea. Eight fatal cases of whooping-cough were recorded in Edinburgh; 4 of diarrhoea in Dundee and 5 in Aberdeen; 3 of measles in Paisley; and 2 of diphtheria in Leith.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, June 12th, 627 births and 366 deaths were registered in the twenty-two principal urban districts of Ireland, as against 636 births and 360 deaths in the preceding period. The annual death-rate in these districts, which had been 22.1, 22.2, and 16.4 per 1,000 in the three preceding weeks, rose to 16.7 per 1,000 in the week under notice, this figure being 4.1 per 1,000 higher than the mean annual death-rate in the seventy-six English towns for the corresponding period. The figures in Dublin and Belfast were 8.7 and 16.1 respectively, those in other districts ranging from 4.0 in Dundalk and 4.8 in Sligo to 31.8 in Lisburn and 43.1 in Ballymena, while Cork stood at 21.2, Londonderry at 15.3, Limerick at 8.2, and Waterford at 13.6. The zymotic death-rate in the 191 Irish urban districts averaged 1.3 per 1,000, as against 1.0 per 1,000 in the preceding week.

		30 WEDNESDAY ..	

ANNUAL MEETING, BRITISH MEDICAL ASSOCIATION, BELFAST, 1909.

The Seventy-seventh Annual Meeting of the British Medical Association will be held at Belfast from July 23rd, to July 31st, 1909, under the Presidency of Sir William Whitla.

The Annual Representative Meeting commences in Belfast on July 23rd. The Presidential Address will be delivered on July 27th. The Sections will meet on July 28th, 29th, and 30th.

A preliminary programme of arrangements was published in the SUPPLEMENT of June 12th, p. 373. The Honorary Local Secretaries are: Henry Lawrence McKisack, M.D., M.R.C.P., 17, University Square, Belfast; Cecil Edward Shaw, M.A., M.D., M.Ch., 29, University Square, Belfast; and Howard Stevenson, B.A., M.B., F.R.C.S.I., 2, College Square North, Belfast.

The annual subscription to the BRITISH MEDICAL JOURNAL for non-members is £1 8s. 0d. for the United Kingdom, and £1 15s. 0d. for abroad.

SUPPLEMENT TO THE BRITISH MEDICAL JOURNAL.

Meetings of Branches & Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

LANCASHIRE AND CHESHIRE BRANCH: BOLTON DIVISION.

The annual meeting of this Division was held in the library at the infirmary on May 17th, at 8.30 p.m. Dr. BRAZIL was in the chair, and there were present: Drs. Macfie, Young, Mallett, Mothersole, Swainson, Pattinson, Flitcroft, Jefferies, Pickering, Gray, and Miss Bernfeld.

Confirmation of Minutes.—The minutes of the last annual meeting were read and approved.

Election of Officers.—The following were elected to the various offices for the ensuing year: *Chairman*, Dr. Brazil; *Vice-Chairman*, Dr. Flitcroft; *Representative on Branch Council*, Dr. Jefferies; *Representative for Representative Meeting*, Dr. Pattinson; *Honorary Secretary and Treasurer*, Dr. Wood; *Executive Committee*, Drs. Macfie, Mothersole, Mallett, Young, O'Neill, and Laslett.

Annual Report.—The annual report of the Executive Committee was read and approved.

Earlier Appointment of Representative.—It was unanimously resolved to alter the Division rule so as to provide for the election of the Representative to the Annual Representative Meeting being made as early as possible after January 1st in each year.

Central Council Election.—It was unanimously resolved:

That the action of the Committee in nominating for this Division Messrs. Larkin, Garstang, Taylor, and Macfie as candidates for the Central Council election be approved.

Whole-time Medical Officers of Health.—On this subject it was resolved:

That this Division is of opinion that medical officers of health, with proper security of tenure and with adequate remuneration, should be debarred, where practicable, from engaging in private practice.

Medical Certification of Suitability for Hospital Treatment.—The report on medical certification of suitability of patients for hospital treatment was considered, and it was resolved by 6 to 5:

That the meeting approves the recommendation of Council.

Contributions to Hospitals by Employers and Employees.—The report on contributions to hospitals by employers

of labour and employees was considered, and it was resolved:

That this Division agrees that the contributions to hospitals by employers of labour and employees, by means of weekly collections and otherwise, should not be considered as entitling the contributors to unlimited hospital as also gratuitous medical attendance, as at present seems to be claimed, and disagrees with all the rest of the motion.

Fresh Public Medical Institutions.—With regard to the statement as to fresh public medical institutions, it was resolved:

That the meeting approves the motion of the Council.

Sanatoriums for Tuberculous Workers.—On this subject it was resolved:

That the meeting accepts the resolution of the Representative Meeting.

Medical Inspection of School Children.—The report on this subject was very fully considered, and it was resolved:

That this meeting approves of the Recommendations A to N.

BURNLEY DIVISION.

The adjourned meeting of the Division was held on June 10th, Dr. PULLON in the chair.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Central Council Election.—A letter was read from Dr. Garstang thanking the Division for its support, in the Central Council election, of himself and Drs. Larkin, Macfie, and Taylor.

Current Work of the Association.—The HONORARY SECRETARY read the monthly report on current work of the Association.

Annual Picnic.—It was decided to hold the annual picnic conjointly with the Burnley Medico-Ethical Society on June 24th at Grassington, leaving Bank Top Station at 10.35 a.m.

Annual Representative Meeting.—The provisional agenda was considered, and it was unanimously resolved to adopt an amendment to Motion No. 30, following the word "appointment" in line 7 of the recommendation:

It would therefore seem that a person whose whole time, or the greater part of it, during the school session, and during school hours, is taken up with the duties of medical inspection of school children is ineligible for the title of "Assistant M.O.H.," and ought to be designated "School Medical Officer," or some similar title, and should receive the remuneration agreed upon by this Association for such work, whether he be under the supervision of the M.O.H. or not.

LIVERPOOL AND BIRKENHEAD COMBINED DIVISIONS.

A meeting of the combined Divisions was held on June 18th, at 4.30 p.m., at the Liverpool Medical Institution, Sir JAMES BARR in the chair, later Dr. HARRIS. About seventy-five members were present, of whom fifty-five signed the presence list.

Confirmation of Minutes.—The minutes of the last ordinary meeting of May 14th and of the special meeting of May 21st were read and confirmed.

Hospital Abuse.—The report of the Hospital Abuse Committee was presented by the Chairman of the committee, Dr. HARVEY. It recommended the Divisions to disapprove of the plan of co-operation between hospitals and the public health authorities for the treatment of ophthalmia neonatorum, initiated by the St. Paul's Hospital and recommended for general adoption. The St. Paul's Hospital is arranging to place a ward of ten beds and ten cots and the services of its medical staff at the disposal of the public health authorities for the treatment of ophthalmia neonatorum, and the committee, while not objecting to charitable hospitals treating this or any other disease among the poor, asked the Divisions to say that admission to charitable hospitals should not take place through health authorities, and when such authorities take upon themselves the duty of dealing with any disease they should themselves provide for its treatment and for the payment of the medical men employed. Dr. TISDALE seconded the adoption of the motion, but reserved his remarks to a later stage. Mr. A. N. WALKER opposed the adoption of the motion. Mr. LARKIN, Dr. STOKES, Dr. BRADSHAW, Dr. WESTBY, Dr. DAVIES, and Dr. CATON having spoken, Dr. BRADSHAW moved that the question be now put. Dr. TISDALE asked to be allowed to speak as seconder of the motion, but Dr. Bradshaw's motion was accepted by the CHAIRMAN and carried. Dr. Harvey rose to reply, but was refused a hearing, and the report was rejected by 29 to 21 votes.

The meeting then adjourned.

PRESTON DIVISION.

A joint clinical meeting of this Division with the Preston Medico-Ethical Society was held at the Preston and County of Lancaster Royal Infirmary on Friday, June 18th, when twenty-seven members were present; Dr. TALBOT was in the chair.

Cases.—Dr. ARTHUR RAYNER showed a case of Raynaud's gangrene. Dr. SELLERS showed three interesting cases illustrative of conservative surgery—excision of knee-joint, excision of knee-joint and ankle-joint. Dr. SYKES showed two cases of excision of lacrymal sac for long persistent mucocele; a case of suppurative hyalitis due to injury; and a series of ten cases showing the result of the complete radical mastoid operation. Dr. HADFIELD showed a case of a specific psoriasis treated very successfully with soamin. Dr. COLLINSON showed the following cases: (1) Charcot's knee; (2) stone in kidney, operation, with radiographs before and after, by Dr. Arthur Rayner; (3) perforated duodenal ulcer after operation; (4) gall stones after operation; (5) talipes treated by (a) tarsectomy, (b) tendon grafting; (6) excision of rectum.

MIDLAND BRANCH.

The annual meeting of the Midland Branch was held at the Leicester Infirmary on June 10th. The PRESIDENT, Dr. Pratt, was in the chair, and thirty-five members were present.

Branch Council, 1909-10.—The Branch Council for 1909-1910 consists of the following: *President:* Dr. Pratt. *President-elect:* Dr. W. H. B. Brook (Lincoln). *Vice-Presidents:* Boston and Spalding Division, Dr. F. Husband (Crowland); Derbyshire, Dr. Cassidi; Nottinghamshire, Dr. Willis. *Representatives of Central Council:* Dr. Carline and Dr. St. John. *Honorary Secretaries of Divisions:* Leicester and Rutland, Dr. Gibbons; Lincoln, Dr. Chater; Boston and Spalding, Dr. Wilson; Nottingham, Dr. Henderson; Derbyshire, Dr. H. Barber. *Elected Members:* Boston and Spalding, Dr. Mason; Leicester and Rutland, Drs. Pope, Burkett, Douglas, Tibbles, Hicks; Derbyshire, Drs. Chawner, Hicks, Moxon, and Sims; Nottingham, Drs. Ferraby, Ringrose, Stafford; Lincoln, Dr. Genney; *Honorary Secretary and Treasurer:* Dr. Sevestre, 119, London Road, Leicester.

President's Address.—Dr. PRATT gave an interesting address, in the first portion of which he dealt with some changing aspects of the medical profession. He passed on to consider experiment and experience, laying stress on the necessity of experiment being controlled by experience.

Vote of Thanks.—A very cordial vote of thanks was given to Dr. Pratt not only for his address, but also for the hospitality he had extended to members attending the annual meeting.

Cases, etc.—Mr. C. J. BOND showed some instructive skiagrams of renal calculi. Cases were demonstrated by Dr. RINGROSE, Dr. PRATT, Mr. MARRIOTT, and Mr. CUMBERLIDGE.

NORTH WALES BRANCH:

DENBIGH AND FLINT DIVISION.

The annual meeting of this Division was held at Wrexham on June 4th.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Representative on Central Council.—The nomination of Dr. H. Jones-Roberts, the present Representative of the North Wales Branch, was unanimously approved of.

Election of Officers.—The officers of the Division for the ensuing year were elected as follows: *Chairman*, Dr. J. C. Davies; *Vice-Chairman*, Dr. David Fraser; *Honorary Treasurer*, Dr. E. Moss; *Honorary Secretary*, Mr. E. D. Evans; *Representatives on Branch Council*, Drs. H. Drinkwater, Richard Evans, and E. Moss; *Representatives on Executive Committee*, Drs. W. Vaughan Griffith, Richard Owen, and D. Llew. Williams; *Representative of Division in Representative Meetings of Association*, Dr. J. E. H. Davies.

Instructions to Representative at Annual Representative Meeting.—The Representative of the Division was instructed to vote in favour of the resolutions of the Hampstead and Wandsworth Divisions on representation of local medical profession on boards of hospitals and similar bodies; and of the Report of Council on medical certification of suitability of patients for hospital treatment. With regard to the remaining "Matters Referred to Divisions," the Representative was given a free hand. Touching sanatoriums for workers suffering from tuberculosis, the meeting approved of the statement made and the resolution passed by the Representative Meeting.

Inoculation Treatment of Pulmonary Tuberculosis.—Dr. H. HYSLOP THOMSON, of the Liverpool Sanatorium, read an interesting paper entitled, "The inoculation treatment of pulmonary tuberculosis. Several members took part in the discussion following the reading of the paper, and a cordial vote of thanks was accorded Dr. Hyslop Thomson.

Cases, etc.—Dr. J. C. DAVIES showed a case of congenital heart disease, and read a paper on the condition; also a case of bradycardia, with notes; and two cases of von Jaksch's disease (pseudo-splenic leukaemia), with notes. Considerable interest was shown by the members present in the examination of these cases, and Dr. Davies was heartily thanked for the trouble he had taken in bringing them forward, and for his interesting and instructive notes.

SOUTH WALES AND MONMOUTHSHIRE BRANCH:

SWANSEA DIVISION.

A MEETING of this Division was held at the Swansea Hospital on May 14th, Dr. HANSON in the chair.

Local Government Board and Unqualified Practice.—As the result of a recent circular sent by the Local Government Board to medical officers of health asking for information respecting the practice of medicine and surgery by unqualified persons, the following resolutions were unanimously carried, the Secretary being instructed to forward them to the Medical Officer of Health for Swansea.

That the practice of medicine and surgery by unqualified persons is assuming larger proportions, more particularly in the form of pseudo-specialism.

That in many cases the effect on public health is injurious on account of: delay and loss of invaluable time in cases of malignant disease, early phthisis, etc.; danger accruing to life and limb from maltreatment in joint diseases; and permanent injury to eyesight by improper prescriptions of glasses, etc.

That under present conditions the public has considerable difficulty in distinguishing between qualified and unqualified practitioners, to a great extent on account of the mis-

leading use made by the latter of various combinations of letters; and that, in the interests of the public, amendment of the Medical Acts is urgently needed.

Theocin.—Dr. LANCASTER read some notes on theocin and its uses.

Ophthalmia Neonatorum Report.—In connexion with the report of the Ophthalmia Neonatorum Committee Dr. FRANK THOMAS opened a discussion on that disease by an interesting paper in which was embodied and emphasized the principal points in that report. After a general discussion the following resolution was carried unanimously:

That this Division is of opinion that in the interests of the public health and as a prevention of blindness ophthalmia neonatorum should be made a notifiable disease.

ANNUAL MEETING.

The annual meeting of the Division was held at the Swansea Hospital on Thursday, June 3rd.

Election of Officers.—The following officers were elected for the ensuing year: *Chairman*, Dr. E. Le Cronier Lancaster; *Vice-Chairman*, Dr. A. W. Cameron; *Honorary Secretaries*, Dr. Daniel E. Evans, Dr. L. Freeman Marks; *Representative of the Division in Representative Meetings*, Dr. L. Freeman Marks; *Executive Committee*, Drs. D. Arthur Davies, W. F. Brook, J. S. H. Roberts, A. Hanson, J. Arnall Jones, J. Clarke Begg; *Representatives on Branch Council*, Drs. E. Le Cronier Lancaster, Frank G. Thomas, J. M. Morris; *Branch Contract Practice Committee*, Drs. J. Arnall Jones, Bryce, J. S. H. Roberts.

Earlier Election of Representatives.—A motion to alter Division Rule 7 so as to permit of the election of the Representative in Representative Meetings "not more than nine months nor less than three weeks" before the Annual Representative Meeting, was carried unanimously.

Agenda of Annual Representative Meeting.—The provisional agenda of the Representative Meeting was considered, and the Representative was instructed to use his discretion in voting except on those questions which had been discussed at previous meetings when the Division had expressed a definite decision. It was also resolved:

That the Representative be instructed to protest against the proposed diminution in the grant to the Divisions from 4s. to 2s. per member, the latter amount being insufficient to carry out a proper administration of the business of the Division.

YORKSHIRE BRANCH:

WAKEFIELD AND DONCASTER DIVISION.

A MEETING of members of the British Medical Association, convened by Dr. Goyder, was held at the Black Bull Hotel, Wakefield, on Friday, June 11th. There were present Dr. Roulston (Wakefield), Drs. Knowles and Shine (Barnsley), Dr. Steven (Featherstone), Dr. Osmond (Pontefract), Dr. Ward (Brotherton), Drs. Hillman, Kemp, and Chispin (Castleford), and Drs. Metcalfe and Goyder (Bradford). Dr. ROULSTON was called to the chair, and desired Dr. Goyder to introduce the business of the meeting.

Proposed Reorganization of Division.—Dr. GOYDER said: At the request of Dr. Bronner, the Secretary of the Yorkshire Branch, and as one of your representatives for the Branch on the General Council of the Association, I have accepted the duty of calling you together to-day, to ascertain your wishes as to the reorganization of the Wakefield and Doncaster Division. What first prompted this action was the failure of the members for Castleford fifteen months ago in their attempt to obtain just remuneration for their services as medical officers of the Poor Law guardians of the district union. This was discussed at one of the committees of the Council at which I was present, and the failure was attributed to the absence of any executive in the Division to support their contention with the guardians. These medical officers lost their appointments, and another practitioner was elected in their stead. This was considered by the committee as by no means an issue to be repeated, and the Yorkshire Branch was appealed to, to use its best efforts, and as a matter of urgency, to rouse the Division into organized action. I promised at the meeting to do what I could to bring the matter before you, and, if possible, prevent the occurrence of a similar result, and hence your meeting to-day. As shortly as I can, I desire to point out the advantages to be derived by medical men uniting as a Division of the Association for their own interests,

in an organized form, under the aegis of the parent body. Action must begin at the spot where an interest is threatened before the whole force of the Association can be secured behind it. The British Medical Association is now a strong and recognized power amongst the public bodies of the nation. The advantages of its help have exhibited themselves again and again in influencing the Legislature, the Local Government Board, and other public bodies in matters relating to public health, and the position of medical men in relation thereto, and especially as to the emoluments due to them for their work. The objects of the Association are important and manifold; they not only comprise the maintenance and dignity of the profession as a whole, but its interests individually; they seek the recognition of their status as a body of trained and educated men, worthy to exercise a beneficial influence upon society around them; but, more than this, the Association seeks to increase the personal worthiness of its members by inciting them to individual efforts to keep up the highest standard of knowledge by research, by repeated meetings in their Divisions, where their views and experiences can be exchanged with their colleagues and amplified and perfected by correction and discussion—it seeks by such meetings to make medical men better known to and appreciated by each other, so that coldness and jealousies can be removed; and last, not least, it seeks to increase the social gatherings of medical men, so that feelings of kindness may be generated which may bear fruit in mutual helpfulness in the difficulties of their private work. All these advantages are to be secured in a good Division. In this Wakefield and Doncaster Division it seems as if certain difficulties existed as to central points of meeting. Your railway communication does not seem to lend itself to quick transit and return, and this is one great barrier to prolonged and frequent meetings. You are not like Leeds or Bradford, where the mass of members are in the cities themselves; but you have your own remedy for this difficulty. The rules of the Association do not prevent you dividing your area into more than one Division. Barnsley has most wisely acted upon this principle and formed a Division of its own, and there is no reason why, as a centre, it should not include and draw into itself all the members in surrounding towns and country places which are most accessible to it by more rapid railway communication. Why should not a similar division be formed for Wakefield and Castleford, with Wakefield as a centre, and include the members in the places around it, such as Pontefract, etc., and all others most accessible to Wakefield by rail? There is no compulsion exercised by the Association against your own free and convenient arrangements. The great desire is, that you should join in such Divisions to secure by organization, mutual advice, assistance, and protection in the pursuit of your interests. May I venture to remark that it seems to me that the one thing the whole area requires to overcome is the supineness of many of its members, and their lack of belief that the Association has advantages to offer; and the only remedy I can recommend is for the more active members at once to form the Divisions, and from them and individually, to indoctrinate their colleagues with the truth of the convictions they themselves possess. I have heard that the Doncaster members feel a desire to gravitate towards Sheffield, but I do not see why they should prefer Sheffield to Barnsley or even Wakefield, if there is equal facility of railway communication; the matter, however, is for their own decision, but they should decide at once, for formation should be no longer delayed. With these general remarks, which I premise in order to commence a discussion, I need only add that if fresh organization is determined upon the materials for your procedure can be at once furnished to you. The official map of the Yorkshire Branch Divisions lies upon the table, and you can arrange your area as you think wise, since you are better judges of the requirements of its localities than one who is a comparative stranger to the district.

A general conversation ensued taking up the points in the statement and approving the suggestions laid down. Dr. KNOWLES, Chairman of the Barnsley Division, spoke of the grounds which had induced Barnsley members to form a separate Division of their own—their railway communication had much to do with preventing facile communication with the rest of the area. He concurred in the

suggestion to inaugurate another Division for the Wakefield, Pontefract, and Castleford Districts. He was of opinion that the Doncaster men were in more rapid communication with Wakefield than either Barnsley or Sheffield. These remarks were concurred in by Dr. SHINE, of Barnsley, who described the method adopted in calling together the members of the Association from their special districts in and around Barnsley, and the successful formation of the Barnsley Division. He also testified to the increase of kindlier feeling as a result of medical men meeting together. Drs. W. KEMP and HILLMAN, of Castleford, and Dr. OSMAN, of Pontefract, together with the CHAIRMAN, Dr. Roulston, made comments and inquiries, to all which Dr. GOYDER and Dr. METCALFE, of Bradford, made replies. Dr. GOYDER recommended the formation of a supplementary committee to draw up a circular and issue it to every member of the Association in the area proposed for the new Division, and convene an early meeting at Wakefield and at once elect a chairman, secretary and other officials, representatives and an executive committee, and so constitute the Division. This proposal was cordially acceded to, and a supplementary committee was thereupon appointed, with Dr. Hillman of Castleford as temporary secretary. The names of the gentlemen were as follows: Wakefield, Dr. Roulston, Dr. Stanger, Dr. Statter, and Dr. Walker; Pontefract, Dr. Osmond; Featherston, Dr. Steven; Castleford, Dr. Hillman and Dr. Kemp; Normanton, Dr. Sandford. The rules of the Yorkshire Branch, the map of its Divisions, and the rules of the Bradford Division were placed in the hands of Dr. Hillman, and it was recommended that a mutual agreement should be arrived at as to the limits of the areas to be allotted to the Barnsley Division and to the new Division to be called the "Wakefield, Pontefract, and Castleford Division." Dr. GOYDER promising to ascertain the wishes of the Doncaster members as to which area—that of Sheffield, or Barnsley, or Wakefield—they would conclude to ally themselves with. A very cordial, unanimous, and hopeful tone was displayed by the gentlemen present at the meeting, which, after the kindly expression of votes of thanks and the provision of tea, was dissolved.

An Address

ON

HOME AND HOSPITAL TREATMENT OF THE POOR AND THE LOW-WAGE EARNERS.

BASED ON THE MAJORITY REPORT OF THE ROYAL
COMMISSION ON THE POOR LAWS AND
RELIEF OF DISTRESS.

DELIVERED AT THE ANNUAL MEETING OF THE METROPOLITAN
COUNTIES BRANCH.

By J. FORD ANDERSON, M.D.,

PRESIDENT OF THE BRANCH.

I SHALL begin by saying how greatly I appreciate the honourable position in which I am placed by the votes of the Branch. I am sure that without your kind indulgence and support I cannot hope to discharge the duties satisfactorily, but with that help I hope to win through, and it shall be my aim to maintain the high reputation which has been gained for the office of President of the Branch by a long line of distinguished predecessors.

In this short study of home and hospital treatment of the poor and low-wage earners, which I now commence, I will ask you to consider the situation which would be created by the adoption of the Majority Report of the Royal Commission on the Poor Laws, with special reference to some of our London conditions. In carrying out this idea it must be acknowledged that the general scheme of the report in some of its applications is attractive, although other details would require to be carefully worked out, or even reconsidered.

It is not attempted to give more than an outline of the recommendations of the Commission, as it may be presumed that all who are present have read either the original report, or the admirable epitome in the *BRITISH MEDICAL JOURNAL* of February 20th. 1909. I would especially premise that I do not desire to be the champion of the Majority, as opposed to the Minority, Report. I selected

the Majority Report for my subject—which is, to a great extent, the co-ordination of hospitals—as it seemed to provide what is necessary.

The new and pervading principle in the report is the introduction of a spirit of efficiency and hopefulness into all branches of the service of the poor, which is absent in the Poor Law Act of 1834, and also the outcome of this principle in the following recommendations of the Commission, namely: (1) That medical assistance should be organized on a provident basis; (2) that the division of the Local Government Board, which has hitherto dealt with the relief of the poor, should in future be known as the "Public Assistance Division," and, subsidiary to this, the following two bodies should be constituted, namely:

(a) A Public Assistance Authority in an enlarged area of the county or county borough, for central administration and control. In London this would be the County Council, and its nominated committee. This committee would be a statutory committee, and one-fourth of its number would be nominees of the Local Government Board.

(b) A Local Assistance Committee, which would supply the local knowledge which is so essential, working in co-operation with the respective authority. In London this would be nominated by the borough council.

These two bodies would take over the duties of the guardians, and would go beyond them in the direction of co-operation with other State and voluntary agencies for supplying help which is preventive, curative, and restorative, and it ought to be a legitimate source of satisfaction to us that the Royal Commission suggests the inclusion, both in the central authority and in the Local Assistance Committee, of representatives of the local Branch or Branches of the British Medical Association, appointed *ad hoc* on the nomination of such Branch or Branches. The report here seems to provide that the representation shall be a true representation, the central authority appointing the nominee or nominees of the Branch or Branches, and, although the Branch only is mentioned, it is manifestly intended that Divisions would have similar privileges.

HOME TREATMENT.

The principles laid down find their first application in home treatment; the instincts of independence and self-maintenance are to be fostered by the establishment of public medical services open to the whole profession, on a provident basis, and with strict wage limits. That is the central idea, and on that basis the whole scheme for the medical care of the poorer classes is reared. The public medical service scheme has been elaborated by the British Medical Association, and is carried out already successfully in six or seven English towns, and therefore requires no comment here as to the details of working, but, under the report of the Royal Commission, there is a new and most important rôle assigned to the public medical services. They will co-operate with the hospitals and other bodies which carry out public treatment, and the public assistance authority, through the local committees, will contribute to the payments of such of the poor as are handed over to the services. This means that the Poor Law, as we have known it, represented by the guardians, would be at an end, and its place would be taken by the public assistance authorities, who would carry it out in co-operation with education authorities, voluntary charities, and other bodies. The public assistance officer would take the place of the relieving officer—the district medical officer would continue to act—but the duty of both those officials would be, after providing for emergencies, to endeavour to transfer applicants for medical aid to the Public Medical Service, even if the authority should have to pay for the purpose.

Thus, the idea is to remove poverty off the scene; but whether the day will ever come when we shall not have the poor with us cannot be foretold.

Referring to what I have said incidentally with regard to the Poor Law, I wish it to be understood that I am offering no opinion as to the question of the Minority or Majority Report which is at present under consideration by Poor Law medical officers. I have not all the data, as they must have, for arriving at a conclusion. Besides my object here was to show what the public assistance authorities would be, and how their constitution makes for co-ordination of home and hospital treatment on principles recognized for the most part by the British Medical Association.

HOSPITAL TREATMENT.

It must be admitted that our hospital system requires reorganization. Hospital accommodation is at present supplied by the Poor Law and sanitary authorities, and also by voluntary or charitable hospitals. To these may be added a fourth class, namely, institutions provided by the education authorities for epileptic children and other classes of defective or diseased children, and the "school clinics" which are being established may possibly lead to indefinite extension in this direction. All these varieties are providing similar services, each on its own lines, without any co-operation worth mentioning, which does not tend either to efficiency or economy, and if the coming legislation can co-ordinate these institutions as the report proposes, it will be a boon to our social life.

VOLUNTARY HOSPITALS.

In the voluntary hospitals of the future considerable changes are foreshadowed, for they are to occupy a distinct place in the scheme of public assistance. The hospital dispensaries would be suppressed, or, in other words, the out-patient departments would cease to be open to all-comers, and would be used for consultations as the British Medical Association advises. It is suggested that precautions should be taken against the overlapping of Poor Law and voluntary agencies, as it has been shown in the report that the voluntary hospitals have been largely carrying on the work of the Poor Law. Thus at the London Hospital it was ascertained that 38 per cent. of the out-patients were fit subjects for Poor Law relief; some of these were actually receiving relief, but a much greater number are only stated to be of the same class as those receiving relief. Thus, if 1,312,000 new out-patients, as in 1906, are attending the general hospitals of London, 38 per cent. would be equivalent to 490,560, or, in other words, little less than half a million destitute persons are being treated annually to whom suitable maintenance is impossible, and in whose case, therefore, out-patient treatment is futile. It would also follow that the hospitals would cease to compete with the provident medical institutions, and this would be all the more necessary in view of the extending establishment of public medical services and their increased importance in the future. It cannot be doubted that the provident dispensaries in London have never succeeded as they should have done, owing to the facilities offered by the out-patient departments and the free dispensaries. If the hospitals were thus relieved of the destitute patients, the patients eligible for public medical services, and the uncertain number of well-to-do patients who might be treated privately, they need not fear that illustrations of disease would be wanting. The number of cases no doubt would be reduced, and happily so, but with outside practitioners co-operating, and improved co-ordination with other bodies, the hospital clinic might become our glory.

PUBLIC ASSISTANCE HOSPITALS.

The public assistance hospitals of the Commission would include the present Poor Law infirmaries and the hospitals of the sanitary authorities, whether general or special; also the "school clinics" of the education authority—in any case, the education and public assistance authorities must work in strict co-ordination in order to prevent overlapping. These public and voluntary hospitals would be organized on defined principles, and would each undertake the work deputed to them on strict co-operative lines—thus the destitute and the assisted patients would be referred to the public assistance hospitals, probably gratuitously, and the provident members would, on the recommendations of their medical attendants, be sent to their respective co-operating voluntary hospitals provided their cases are suitable. These two classes of hospitals would necessarily remain, however, to a large extent interchangeable—as, for example, in emergencies—and the objections to such interchange would be met in the case of public assistance hospitals by arranging for recovery of the cost, if possible, and by clearly laying down that no disfranchisement or stigma of pauperism would be incurred by applying for medical aid, and in the case of voluntary hospitals by the provision of pay beds on approved principles where patients might pay for themselves or be paid for by the public assistance authority. It would follow that when the patient pays in the pay ward or pay beds of a voluntary hospital he should be allowed to select his

medical attendant as in cottage hospitals, and if paid for by the public assistance authority he should be attended by a medical officer appointed *ad hoc* by such authority. These arrangements would do away with the anomaly which prevails at present of treating Poor Law cases for payment in wards dedicated to charity.

TEACHING AND STAFFING.

Before suggesting further means of co-ordination between the public assistance hospitals on the one hand and voluntary hospitals and outside practitioners on the other, I will sketch in a few words the present position.

There are 30 Poor Law infirmaries in London, containing 16,300 beds, against 10,224 beds in the voluntary hospitals—that is to say, 6,000 more beds in the former than in the latter—and these infirmaries are distributed uniformly over the metropolitan boroughs, as shown in the map published in the BRITISH MEDICAL JOURNAL of January 9th, 1909. The medical work of these institutions is conducted by resident medical officers, who pass their active professional lives in the service, and although they are mostly able and devoted officers—many of them very much so—they are unable to utilize fully the vast material at their disposal, which is thus lost for the advancement of medical science and practice; and, with the view of improving these conditions, it was suggested by several witnesses before the Royal Commission that the public assistance hospitals should be used for clinical teaching. This was cordially approved by the Commission, and sooner or later may be carried out. As to the methods of selection, I am informed there would not be much difficulty in giving opportunities to teachers and senior students of using the valuable material in those hospitals for educational purposes. I think it would also be a useful reform if outside practitioners were brought into touch with the public assistance hospitals; and, although apparently there is no mention of the staffing in the report of the Commission beyond the recurring remarks that the Poor Law infirmaries are insufficiently staffed, I think visiting practitioners might be appointed for at least a portion of the service of the public assistance hospitals, and preferably those residing in the locality, if able and willing to perform the duties. I do not suggest the details, but there are precedents to guide us. In any scheme the existing resident staff must be safeguarded. In connexion with this matter of staffing, it must be admitted that there is an absence in London of opportunities for practitioners usually unattached to voluntary hospitals of treating patients in public institutions, except in some suburban cottage hospitals; and it is to be hoped that we may see a new career opened for many of them in connexion with public assistance hospitals. It cannot be denied that private practice by itself has the tendency to stereotype practitioners, while the public practice suggested would stimulate them to keep abreast of medical progress, and would tend to raise the prestige and usefulness of the profession generally.

A good deal has been said about co-operation between different authorities and institutions—that is indeed the keynote of the whole scheme; but certainly the co-operation which is implied rather than expressed is the most important of all. If the profession could realize that agreement can only be attained on the principle of the greatest good of the greatest number, then shall we be able to make our position what we desire it to be.

In conclusion, these matters are worthy of consideration by all members of this Branch, and without doubt the Central Poor Law Committee of the Association will gladly receive any responsible suggestions. Two of my predecessors in this chair in recent years devoted their inaugural addresses to the importance of the work of the British Medical Association, and the desirability of new members joining the Association. That is not exactly the course that has been adopted here, but it is obvious as a corollary to this address, that if all the powers referred to to-day are to be undertaken or even considered in connexion with the service of the poor, our Divisions should wake up and endeavour to rouse their members to take a more active part in the work of the Association, and our medical brethren outside the Association might be urged to come in and help the profession to exercise these powers, if called upon to do so.

THE METROPOLITAN COUNTIES BRANCH ELECTION.

PROPORTIONAL VOTING.

The annual elections of the officers of this Branch and of its representatives on the Central Council again took place in accordance with the principles of proportional representation. The only nominations received for the posts of President, Treasurer, and Honorary Secretary were those of Dr. Lauriston E. Shaw, Mr. H. B. Robinson, and Dr. E. W. Goodall respectively, and for these offices, therefore, no voting was required. For the election of four Vice-Presidents five nominations were received, and for the election of five representatives on the Central Council there were eight nominations. The counting of the votes for these two elections took place on June 14th, 1909, at the offices of the British Medical Association, and, as the practical working of improved electoral methods is now the subject of an inquiry by a Royal Commission, the following details of the proceedings may be of interest.

The following directions to voters had been issued with each ballot paper:

Place the figure 1 against the name of the candidate who is your first choice. In order to secure in the fullest measure the proportionate representation of the several Divisions of the Branch (which is the object of this method of voting), you should also place the figures 2, 3, 4, 5, so far as you care to go, against the names of the remaining candidates in the order of your preference.

Do not place the same figure against more than one name.

The scrutinies for the two elections were conducted simultaneously, and this description of the proceedings will be more readily understood if the two main principles of the new system of voting are borne in mind. The first principle is that each elector has one vote only, which is recorded by placing the figure 1 against the name of the candidate who is his first choice. The marking of additional preferences only serves to indicate to whom the elector desires his vote to be transferred if his vote cannot be utilized in the election of his first choice. The second principle is that a candidate, in order to ensure his election, need only poll a certain proportion of the votes cast. This proportion, which is the least number of votes sufficient to render certain the election of a candidate, is called the Quota. Thus in a single-member constituency a candidate who polls one more than half the votes must be elected; the quota is therefore in this case one more than half. So, in a two-member constituency, the quota is one more than a third, for not more than two candidates can poll so much; and in a three-member constituency one more than a fourth, and so on. In general terms the quota is ascertained by dividing the votes polled by one more than the number of seats to be filled, and adding one to the result.

The first operation in the election of the Vice-Presidents was to ascertain the number of votes obtained by each candidate. The ballot papers were sorted into groups according to the candidates marked 1, and the number of papers in each group counted. These processes were checked, and the result declared as follows:

ELECTION OF VICE-PRESIDENTS.

Result of First Count.

	No. of Votes.
Thorne, Atwood	154
Greenwood, Major	137
Biggs, M. G.	96
Sibley, W. Knowsley	75
Walker, George	35
Total	497

The next operation was the ascertainment of the quota. There were four vacancies, and the quota—one more than a fifth of the total votes—was 100. Both Mr. Thorne and Dr. Greenwood had obtained more than the necessary quota of votes, and therefore were declared elected. Mr. Thorne, the highest on the poll, had obtained 54 votes more than the quota, and these surplus votes were available for transfer to other candidates. If the supporters of Mr. Thorne had all indicated Dr. Walker as their second preference, the latter, with the aid of these surplus votes, would have been carried ahead of Dr. Sibley. It was, therefore, necessary to ascertain to whom these surplus votes should be transferred. For this purpose the whole of Mr. Thorne's papers were resorted, according to the highest available preferences, a separate heap being

made for each of the candidates not yet elected, and a further heap being made for those papers on which no further preferences were shown. The papers in these heaps were counted, and from each candidate's heap a number of votes equal to his share of the surplus was transferred to him. The details are set forth in the following table:

	Second Preferences shown on Mr. Thorne's Papers.	Votes Transferred to Second Preferences.	Votes Retained for Mr. Thorne's Quota.
Biggs	26	14	12
Sibley	59	30	29
Walker	20	10	10
No further preferences indicated	49	—	49
Totals	154	54	100

This table may, perhaps, need a word of explanation. There were 49 papers on which no further preferences were shown, and the total number of papers to be taken into consideration in transferring the surplus was therefore only 105 (that is, 49 less than the total, 154). The surplus was 54, and Dr. Biggs's proportionate share of this surplus was ascertained by multiplying the number of preferences shown for him, 26, by $\frac{54}{105}$. The result, after the adjustment of fractions, was 14. The share for each candidate was ascertained in a similar manner, and as a result of the transfer the poll stood as follows:

Thorne	Elected
Greenwood	Elected
Biggs	110
Sibley	105
Walker	45

Drs. Biggs and Sibley, having obtained more than the quota, were declared elected, and the election was at an end.

The election for representatives on the Central Council was conducted in the same way. There were, in this case, eight candidates, and, as the transfers required were similar to that already described, only the results need be given. The figures for the first count were as follows:

ELECTION OF REPRESENTATIVES ON CENTRAL COUNCIL.

Result of First Count.

	No. of Votes.
Horsley, Sir Victor	260
Shaw, Lauriston E.	86
Anderson, J. Ford	85
Wallace, Frederick	34
Haslip, G. E.	29
Ker, Hugh R.	28
Hilliard, Harvey	19
Thomson, G. J. Crawford	19
Total	558

In this election the quota was 94—that is, one more than a sixth of the total votes. Sir Victor Horsley obtained the quota, with 166 votes to spare. All his papers were sorted according to the second preferences marked, but, as the shares of the surplus obtained by Drs. Shaw and Anderson brought them both above the quota, it became necessary to proceed to an examination of the third preferences before the surplus was disposed of. At the conclusion of the transfer the poll was as follows:

	No. of Votes.
Horsley, Sir Victor	Elected
Shaw, Lauriston E.	94
Anderson, J. Ford	94
Ker, Hugh R.	87
Haslip, G. E.	68
Wallace, Frederick	52
Hilliard, Harvey	35
Thomson, G. J. Crawford	34

Drs. Shaw and Anderson, having obtained the quota, were declared elected, and the transfer of Sir Victor Horsley's surplus had not only had this result, but had placed Drs. Ker and Haslip in a very favourable position. There were still two vacancies remaining unfilled, and the next operation was the distribution of the votes of the candidates lowest on the poll, beginning from the bottom and working upwards. The candidates in question could

not secure election, and their supporters had indicated by their preferences to whom in that event their votes were to be transferred. After the transfer of the votes of Drs. Thomson and Hilliard in the order named, the poll stood as follows:

	No. of Votes.
Horsley, Sir Victor Elected
Shaw, Lauriston E. Elected
Anderson, J. Ford Elected
Ker, Hugh R.	101
Haslip, G. E.	95
Wallace, Frederick	62

It was not necessary to proceed with any further distribution of votes, and Drs. Ker and Haslip were elected to fill the last two vacancies.

A word should be added as to the number of spoiled votes. In the election for representatives on the Council no less than thirty ballot papers, although correctly marked, were not signed, and were accordingly declared by the scrutineers to be invalid. It was obvious that the votes given on these papers were bona fide votes, and, as the signing of the ballot paper is not required in a public election, the question arises whether the regulation on this point should be altered. In previous elections a considerable number of ballot papers have been disqualified for the same reason. In addition, seven other papers were spoiled; one was blank, in three cases crosses instead of figures had been placed against the names of several candidates, and in the other three cases the figure 1 had been placed against the name of five candidates. In the election for Vice-Presidents the figures were similar, but a larger number of papers were sent in blank.

The two elections were completed in an hour and a half. The operations consist for the most part of sorting and counting ballot papers, and this takes less time than the old method of entering the particulars of each ballot paper upon recording sheets, this method being necessary when each elector has as many votes as there are members to be returned. It is necessary with the proportional system to make several heaps of the ballot papers, and therefore a good sized table is required so as to enable the scrutineers to keep the heaps quite separate from one another.

The great advantage of the system, however, is that it enables all Divisions of the Branch to take an effective part in the selection of its officers and representatives on the Central Council. It enables any considerable section of the Branch to obtain a representative; it prevents the monopoly of representation by the largest Divisions, whilst it gives to members of all Divisions not only freedom of choice but a certainty that their vote will as far as possible be counted towards the election of some one representative.

For those who desire to follow the details of the election of representatives on the Central Council the full result sheet is appended:

Election of Five Representatives on Central Council.

No. of Votes, 558. Quota = $\frac{558}{6} + 1 = 94$.

Names of Candidates.	First Count.	Distribution of Horsley's Surplus.	Result.	Distribution of Thomson's Votes.	Result.	Distribution of Hilliard's Votes.	Final Result.
Anderson, J. Ford ...	83	+11	94		94		94

ATWOOD THORNE,
E. W. GOODALL,
Honorary Secretaries, Metropolitan
Counties Branch.

To ensure the insertion of notices in this column, they must be received at the Central Offices of the Association not later than the first post on Tuesday.

Association Notices.

ANNUAL GENERAL MEETING.

Notice is hereby given that the 1909 Annual General Meeting of the British Medical Association will be held in the Assembly Hall, Belfast, on Friday, July 23rd, at Twelve noon.

[This Meeting is to comply with Article XII, and will adjourn forthwith until Tuesday, July 27th, at 2.30 o'clock.]

ANNUAL REPRESENTATIVE MEETING.

Also, notice is hereby given that the 1909 Annual Representative Meeting will be held in the Assembly Hall, Belfast, on Friday, July 23rd (and following days as required), immediately after the Annual General Meeting, fixed for Twelve noon, on Friday, July 23rd.

BY ORDER OF THE COUNCIL,

GUY ELLISTON.

May, 1909.

COUNCIL MEETING.

A MEETING of the Council will be held at 2 o'clock in the afternoon of Wednesday, June 30th, in the new Council Room, at 429, Strand, London, W.C.

By Order,

GUY ELLISTON.

June 10th, 1909.

NOTICE OF THE FORMATION OF A NEW DIVISION OF THE ASSOCIATION.

POVERTY BAY DIVISION.

THE following change has been made in accordance with the regulations of the Association, and takes effect from the date of publication of this notice:

The members of the Association resident in the counties of Cook, Waipatu, and Waikohu, at present forming part of the Auckland Division (New Zealand Branch), are constituted a Division of the Association designated the Poverty Bay Division.

NOTICE OF CHANGES OF BOUNDARIES OF BRANCHES.

THE following change has been made in accordance with the regulations of the Association, and takes effect from the date of the publication of this notice:

That the Norwood Division be transferred from the South-Eastern Branch to the Metropolitan Counties Branch.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BATH AND BRISTOL BRANCH: BATH DIVISION.—The annual meeting of this Division will be held at the Royal United Hospital on Saturday, June 26th, at 6.0 p.m. Business: (1) To elect officers. (2) To receive annual report. (3) To consider business of Annual Representative Meeting. (4) To consider matters referred to Divisions (see SUPPLEMENT TO BRITISH MEDICAL JOURNAL, May 8th). (5) To modify Divisional Rule No. 7, for ensuring earlier appointment of Representative.—D. LESLIE BEATE, Honorary Secretary.

BIRMINGHAM BRANCH: CENTRAL DIVISION.—The annual meeting of this Division will be held at the Medical Institute on Wednesday, June 30th, at 3.30 p.m., at which the election of officers for the ensuing year will be held. Nominations in writing for the offices of Chairman, Vice-Chairman, and two Honorary Secretaries must reach the Honorary Secretaries not later than Wednesday, June 9th.—A. W. NUTHALL, W. TRACY LYDALL, Honorary Secretaries.

CAMBRIDGE AND HUNTINGDON BRANCH.—The annual meeting of the Cambridge and Huntingdon Branch will be held at Cambridge on Tuesday, July 13th, at 12.30.—H. B. RODERICK, Honorary Secretary, Cambridge.

DORSET AND WEST HANTS BRANCH.—The summer meeting of this Branch will be held in Christchurch, Hants, on Wednesday, July 7th. Members wishing to read papers, show cases, exhibit specimens, or propose new members, must communicate with the undersigned not later than Thursday, June 24th.—JAMES DAVISON, Honorary Secretary, "Streteplace," Bournemouth.

EAST ANGLIAN BRANCH.—The annual meeting of the Branch will be held at the Grand Hotel, Clacton-on-Sea, on Thursday, July 8th.—B. H. NICHOLSON, East Lodge, Colchester, Honorary Secretary.

EDINBURGH BRANCH.—The annual business meeting of the Branch will be held in the Hall of the Royal College of Physicians, Queen Street, Edinburgh, on the afternoon of Wednesday, July 7th, at 4 o'clock p.m. In addition to the business meeting, a discussion will take place upon the treatment of chronic constipation at 4.45 p.m. Members will dine together in the Royal British Hotel at 6.30 o'clock.—A. LOGAN TURNER, FRANCIS D. BOYD, Honorary Secretaries.

LANCASHIRE AND CHESHIRE BRANCH—Science Committee.—Gentlemen who would be willing to give addresses, demonstrations, etc., at Division meetings during the course of next winter will oblige by sending their names and the title of the subjects they propose to deal with as soon as possible to P. CHARLES LARKIN, Branch Secretary, 54, Rodney Street, Liverpool.

METROPOLITAN COUNTIES BRANCH: KENSINGTON DIVISION.—The conference agreed upon on May 12th has been fixed provisionally for July 6th. Any member of the Division who desires to be present should send in his name to Dr. G. CRICHTON, 114, Lexham Gardens, Kensington, W.

METROPOLITAN COUNTIES BRANCH: WESTMINSTER DIVISION.—A general meeting of this Division will be held on Thursday, July 1st, at the Criterion Restaurant. Dinner, 7.30 p.m. Business, 8.30 p.m. A discussion will be opened by Sir Thomas Clifford Allbutt, K.C.B.—J. HOWELL EVANS, Honorary Secretary.

NORTH OF ENGLAND BRANCH.—The annual meeting of this Branch will be held on Tuesday, July 6th, at the Royal Victoria Infirmary, Newcastle-on-Tyne, 9 a.m. to 1 p.m. The Executive Committee of the Newcastle Division B.M.A. are making the following arrangements to hold an "all-day" scientific meeting, and desire hearty co-operation of all medical men residing in the Branch. Gentlemen showing cases or specimens are asked to be good enough to communicate their intention to Mr. Onston, 1, Saville Place, Newcastle-on-Tyne, 1 p.m.: Lunch, Business, 2 p.m. Mr. Rutherford Morrison, Senior Surgeon Royal Victoria Infirmary, President-elect, will take office as President of the Branch for 1909-10. (1) Election of Honorary Secretaries and Treasurer. (2) Election of President-elect. 3.30 p.m.: Visit to Walkergate Fever Hospital, where some very interesting cases will be shown. Visit to Armstrong and Whitworth Works, Elswick. Golf match.—A. E. MORISON, President, D. F. TÖDD, Honorary Secretary and Treasurer, Sunderland.

NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCH.—The annual meeting will be held on Wednesday, June 30th, at the Grand Hotel, Morecambe, at 3.30 p.m. Members willing to show cases or specimens are requested to communicate with A. S. BARLING, Honorary Secretary, Lancaster.

NORTH WALES BRANCH.—The annual meeting will be held at Blaenau Ffestiniog, on Tuesday, July 13th. Members having papers to read, cases or specimens to show, are asked to notify their intention to the Honorary Secretary on or before July 1st.—H. JONES ROBERTS, Honorary Secretary, Penygroes.

OXFORD AND READING BRANCH.—The annual meeting of this Branch will be held at the Radcliffe Infirmary, Oxford, on Wednesday afternoon, June 30th. The dinner after the meeting

will be held at Lincoln College. The President for 1909-10 will be H. G. A. White Locke, Esq., M.D., F.R.C.S.—W. T. FREEMAN, Honorary Secretary.

PERTHSHIRE BRANCH.—A special meeting of the Branch will be held in the Perth Infirmary, on Monday, June 28th, at 3.30 p.m. Business: Consider provisional order to curtail speed of motor cars in Perth to 10 miles an hour. Council meeting at 3.20 p.m.—W. A. TAYLOR, ALEX. TROTTER, Joint Honorary Secretaries, Perth.

SOUTH-EASTERN OF IRELAND BRANCH.—A meeting of this Branch, as also a meeting of the Branch Council and the local Division, will be held at the Club House, Carlow, on Wednesday, July 7th, at 5.30 o'clock. Agenda: (1) Minutes of last meeting. (2) Letters of apology. (3) Correspondence. (4) Dr. O'Brien will move: That the third Wednesday in June be fixed for our future annual Branch meetings at Clonmel, at 12 noon. (5) Dr. Laffan will move: That that portion of Dr. Walsh's resolution designated (a) and carried as amended at Clonmel, which refers to the introduction of the competitive system into the Irish Poor Law Service or into any part thereof, be and is hereby rescinded. (6) Any other business.—J. QUIRKE, Honorary Secretary, Piltown.

SOUTH MIDLAND BRANCH: BEDFORD AND HERTS DIVISION.—The annual meeting of the Division will be held at the Stuart Rooms, St. George's Street, Bedford, at 3 p.m., on Thursday, July 1st. Dr. G. F. Dixon in the chair. The meeting will be preceded by a luncheon at the Stuart Rooms at 1.30, and the Secretary will be much obliged if those wishing to attend the luncheon, and who have not already notified him, will do so not later than June 28th. Business: Minutes; annual report of the Division; election of officers for the ensuing year; inquiry into unqualified practice. Dr. Lauriston Shaw, Physician to Guy's Hospital, will open a discussion on some points in the diagnosis and treatment of common gastric disorders.—E. H. COBB, Honorary Secretary, Belmont, Stevenage.

SOUTH MIDLAND BRANCH: NORTHAMPTONSHIRE DIVISION.—The annual meeting of the Division will be held in the board room of the General Hospital, Northampton, on Tuesday, June 29th, at 2.30. The meeting will be preceded by a luncheon at Franklin's Restaurant at 1.30, and the Secretary will be much obliged if those wishing to attend the luncheon will notify him at least two days beforehand. Business: Minutes. Annual report. Election of officers for ensuing year. Report on medical treatment of school children. Report on treatment of ophthalmia neonatorum. Any other business.—P. S. HICHENS, M.D., Honorary Secretary, Northampton.

SOUTH-WESTERN BRANCH.—The seventieth annual meeting will be held on Wednesday, June 30th, at the Bridge Hall, Bideford, at 3.15 p.m., when Dr. Banks will resign the chair to Dr. Tove, who will deliver his inaugural address. The report of the Branch Council for the year 1908-9 and annual financial statement for the year 1908 will be presented to the meeting, and the officers of the Branch will be elected for the year 1909-10. Luncheon, by the invitation of the President-Elect, will take place from 1 to 2.30 p.m. at the Royal Hotel, Bideford. The annual dinner will be held at 6.15 for 6.30 at the Royal Hotel. Tickets, 5s. each (exclusive of wine), can be had from Dr. E. Pearson, Strand House, Bideford. Dr. Pearson, Strand House, Bideford, has kindly promised to entertain the members at tea at 4.30 p.m. Members desiring to be accommodated with bed and breakfast are requested to send their names to Dr. E. Pearson, Bideford, who will endeavour to arrange for them.—RUSSELL COOMBE, Honorary Secretary, 5, Barnfield Crescent, Exeter.

WEST SOMERSET BRANCH.—The sixty-seventh annual meeting of this Branch will be held at the London Hotel, Taunton, on Friday, July 2nd, at 12.30 p.m., when the chair will be taken by the new President, Mr. Chas. Farrant. Agenda: Annual report. Balance-sheet for 1908. Election of President-elect. Election of Representative. Election of other officers. Letter from Colonel Boyle re the examination of recruits for the Somerset Territorials. President's address, "Haematuria from a Surgical Standpoint." Lunch will be served by 1.30, at a charge of 5s. per head, exclusive of wine, etc. After lunch those present will become the guests of the President, and will be driven to the Pickering Golf Links (four miles), which will be at their disposal, and where they will be entertained to tea. Members are requested to intimate to the Honorary Secretary by Tuesday, June 29th, if they intend to be present at the lunch, and wish to be driven to Pickering.—W. B. WINCKWORTH, Honorary Secretary.

YORKSHIRE BRANCH.—The annual meeting of the Branch will be held at the Grand Hotel, Scarborough, on Saturday, June 26th.—ADOLPH BRONNER, Honorary Secretary, 33, Manor Row, Bradford.

British Medical Association.

ANNUAL MEETING, BELFAST.

PRELIMINARY PROGRAMME OF ENTERTAINMENTS.

The following is a preliminary programme of the entertainments arranged in connexion with the forthcoming annual meeting of the British Medical Association to be held at Belfast next month. The programme is subject to alteration.

TUESDAY, JULY 27TH.

- 10 to 12 A.M. } Inspection of York Street Flax Spinning and
and
2.30 to 4.30 P.M. } Weaving Company's Works (limited to 16
each time).
- 2 to 4 P.M.—Inspection of Messrs. William Ewart and Son's Works, Flax Spinning and Weaving.
- 3 to 5 P.M.—Inspection of Harbour and Docks at the invitation of the Belfast Harbour Commissioners, by steamer. Robert Thompson, Esq., Chairman, will entertain the visitors at tea on board (limited to 150).
- 4 to 6 P.M.—Reception at Mater Infirmorum Hospital.

WEDNESDAY, JULY 28TH.
